ImpactOnDemand® 3.1

## Release Notes

Empower Results®

ImpactOnDemand® is a highly innovative and versatile platform that allows clients to visualize and quantify their exposures to risk, in addition to performing sophisticated, detailed data analysis to drive insightful business decisions.

ImpactOnDemand assists clients in global individual risk mapping, pre-binding underwriting analysis, risk driver analysis, claims planning and preparedness, post-catastrophe analysis, identifying exposure accumulations around terrorist targets, and a host of other functions.
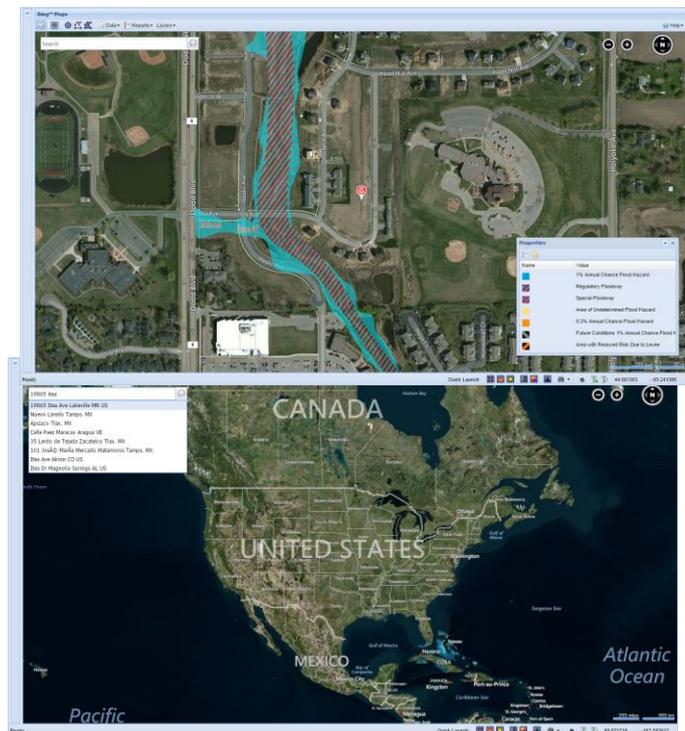

New Feature Enhancements in version 3.1

~ Easy to use, single line geocoding

NEW – Easy to use, single line geocoding with auto fill. Located conveniently on the base map, a user can quickly enter an address and add a pushpin to the map. In addition, the pushpin now contains a popup bubble with address information.

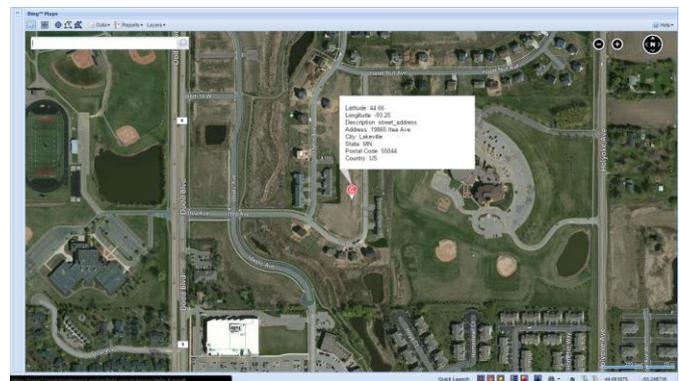

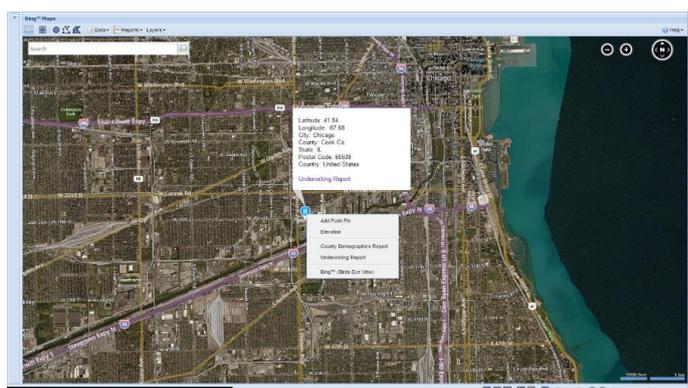

Visual Layers – (non spatial layers)

We have added a new main menu called Layers with the following US choices:

- Flood (FEMA)
- Flood Warnings
- Flash Flood Warnings
- Severe Storm Warnings
- Radar Layer
- Cloud Layer

The user can choose (check) a layer and it

will appear as the first time in the Map Browser (the bottom layer or known as the bottom of the zorder).   Once a user chooses a layer, it will show up as the first layer in the Map Browser (left panel).

Show NOAA Storm Prediction Center by date

NEW – Users will have ability to draw all events from NOAA Storm Prediction center on the base map as one layer. This also includes the popup bubble information.

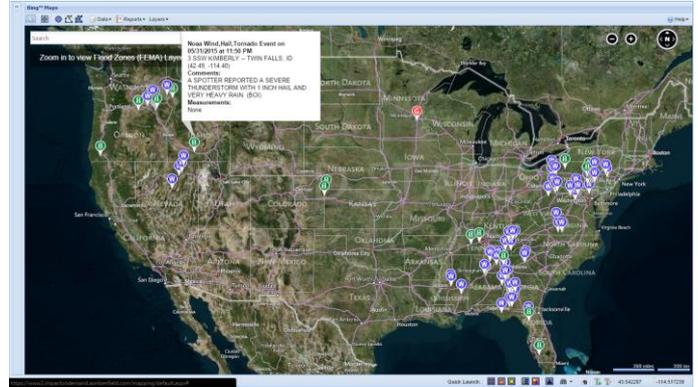

~ Location Intelligence - Distance to Coast and EQ Fault Lines

NEW – Location Intelligence now includes distance to coast line (US east coast) and Distance to earthquake fault lines (US California EQ Fault lines)

- Distance to Coast
- Distance to Fault Line

After pushpin appears on the map on mouse hover it will show tooltip with information (as when hovered over in Map Browser)
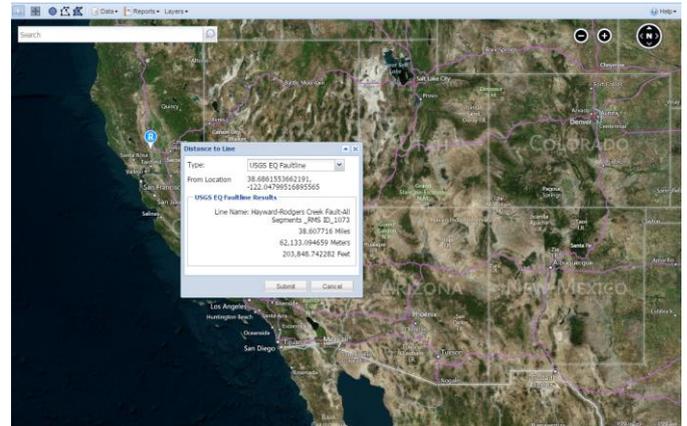

~ Deterministic Ring Report

NEW - Client interest in determining the impact of loss on their portfolio of business requires the estimate of damage to a location should an unfortunate catastrophic event - either terrorism, natural, or accidental, occur.

This report is based on either the property or target centroid studies. It requires damage patterns of certain types of attacks or events. Upon definition of target
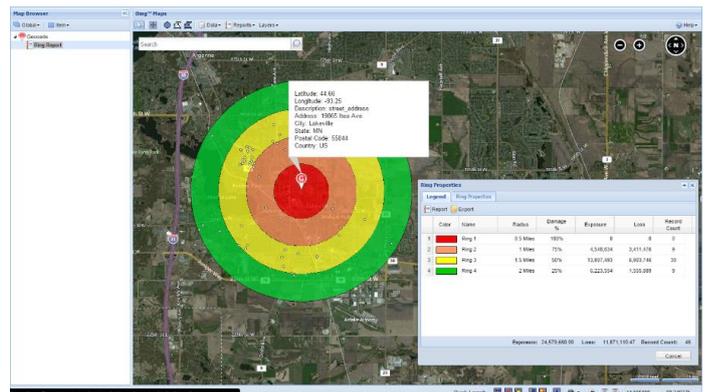

potential, type of attack, and radius of damage, the radius is subdivided into damage categories based on a radial distance from the target.
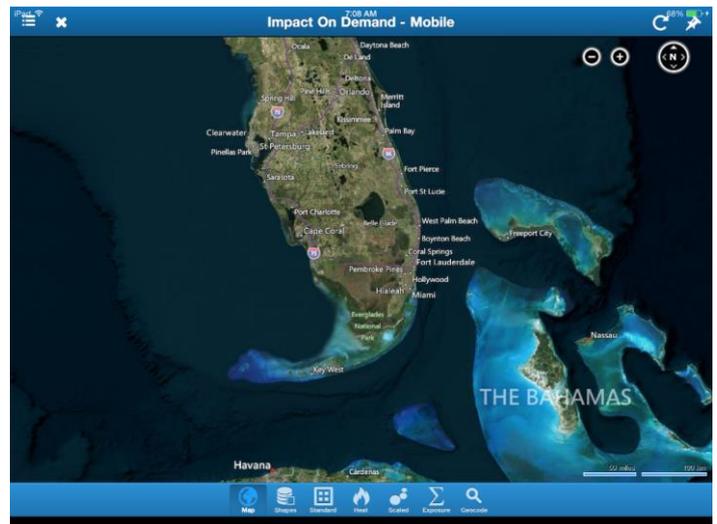

~ ImpactOnDemand Mobile

NEW – a fully touch enabled ImpactOnDemand Mapping Website

https://impactondemand.aonbenfield.com/mobile/

ImpactOnDemand 3.1 has addressed and fixed the following known bugs:

1.   USGS Elevation URL not resolving

2.   Downloading PDF's fails

3.   Initial error with EuroTempest report

4.   Error submitting EuroTempest report

5.   Error doing elevation using USGS server

6.   Error processing NOAA Report

7.   Dataset error occurs for test user
