2015 personal tax guide

and tax tips for 2014

Featuring coverage of the Tax Increase Prevention Act of 2014

INTRODUCTION: TAX PLANNING IN CHALLENGING TIMES

It has now been more than two years since President Obama signed into law the American Taxpayer Relief Act of 2012 ("ATRA"), and we are just beginning to deal with the resulting increases in taxes. The top federal long-term capital gains tax rate is now 20% and the top federal ordinary income tax rate is now 39.6%. ATRA permanently patched the alternative minimum tax ("AMT"). The top estate and gift tax rate is now 40% and a \$5 million gift, estate and generation-skipping transfer tax exclusion (subject to annual adjusts for inflation) was established.

ATRA also provided for several tax incentives for businesses. Many of these credits and incentives expired at the end of 2013. It was not until December 19, 2014 that the President signed into law the Tax Increase Prevention Act of 2014 ("TIPA"), which effectively extended the vast majority of these credits and incentives (a couple did not make the cut!) through December 31, 2014. So the good news is that TIPA provided much needed certainty for 2014 taxes. The bad news is that taxpayers had only a few days left in the year to effectively take advantage of these credits for 2014. Also, because these "extenders" expired again at the end of 2014, we will have uncertainty for 2015 and beyond, as their fate for the future is dependent upon political and economic factors.

Clearly ATRA has had a major impact on the tax situation of many individuals and families. In addition, the Patient Protection and Affordable Care Act imposed a 0.9% Health Insurance Tax on earned income for higher income individuals and a 3.8% Medicare Contribution Tax on net investment income. The tax is imposed on the lesser of (a) net investment income, such as interest income, dividends, capital gains and passive income less expenses directly attributable to the production of such income, and (b) the excess of modified adjusted gross income over a specified dollar amount (\$250,000 for joint filers or a surviving spouse, \$125,000 for married filing separately and \$200,000 for other taxpayers). These taxes are imposed in addition to the other anticipated tax increases and do not impact the regular or AMT calculations.

And of course, health care reform continues to be on the forefront of the news and on the minds of many Americans. Certain mandates of the law went into effect on January 1, 2014, while some others, such as the large employer mandate, were implemented as of January 1, 2015. Business owners need to determine whether their current health insurance benefits meet the minimum essential coverage standard and, if not, whether they should incur the cost of obtaining adequate coverage or just pay the penalties. Do they "pay or play?" Indeed, employers should not only look at their health insurance coverage but the entire compensation package they are offering their employees to maintain cost effectiveness while remaining competitive in the marketplace.

While we now have some degree of certainty with respect to the tax laws, we continue to face much uncertainty with respect to the running of our government. As a result of the November 2014 elections, the Republicans now control both houses of Congress, with a Democratic President in office. This had set the stage for a rather acrimonious encounter in Congress in December, in connection with passing legislation to fund the government and avoid another government shut-down, which we actually witnessed in 2013. In December 2014, Congress did pass a \$1.1 trillion spending bill for fiscal year 2015, which the President has signed into law. The legislation provided appropriations through September 30, 2015 for all agencies with the exception of the Department of Homeland Security, for which appropriations were provided only through February 27, 2015. Congress will need to act again to secure the funding for the Department of Homeland Security for the balance of the fiscal year. This action could very well lead to a showdown over President Obama's controversial immigration plan, when a Republican-controlled Congress may take another shot at rolling back the President's executive order shielding millions from deportation.

With the 2013 Supreme Court decision holding Section 3 of DOMA as unconstitutional, same-sex couples who marry under state law are to be treated as married for federal tax purposes. This decision provides many planning opportunities that were not available previously.

The international arena continues to also impact individuals and their families. The concerns over ISIS, North Korea and the Ebola outbreak in West Africa remind us that global threats very much impact families here at home. Many families with wealth are concerned about their children's future as well as their grandchildren's future, and wonder what can be done to sustain and grow their families in these challenging times.

With all of these law changes and current economic and geopolitical conditions, it is extremely important that you pay attention to your financial position so that you can achieve your financial goals, such as retirement planning, managing cash flow, financing the cost of your children's college education and transferring your family's wealth to the next generation.

We have written this guide to provide you with a tool to identify opportunities to save taxes, accomplish your financial goals, and preserve your family's wealth. This guide includes all major tax law changes through January 1, 2015. We have also devoted a chapter to tax planning strategies specifically for same-sex couples. The best way to use this guide is to identify areas that may be geared to your unique situation and then discuss the matter with your tax advisor. As always, our tax professionals will be pleased to discuss any of the ideas in this guide or any other tax planning approaches that might apply to your personal financial situation.

It is never too early to start planning for the new year!

tax planning strategies

In addition to saving income taxes for the current and future years, effective tax planning can reduce eventual estate taxes, maximize the amount of funds you will have available for retirement, reduce the cost of financing your children's education, and assist you in managing your cash flow to help you meet your financial objectives.

Tax planning strategies can defer some of your current year's tax liability to a future year, thereby freeing up cash for investment, business, or personal use. This can be accomplished by timing when certain expenses are paid, or controlling when income is recognized. Tax planning allows you to take advantage of tax rate differentials between years. However, if tax rates rise in a subsequent year, extra caution may be necessary. If monitored properly, tax planning can also help you minimize, or even prevent, the impact of the alternative minimum tax ("AMT") and preserve the tax benefit of many of your deductions.

The key things you should understand as you look for ways to minimize your taxes are:

- Residents of states with high income and property taxes, such as New York, California, Connecticut, Pennsylvania and New Jersey, are most likely to be subject to the AMT.
- The current top long-term capital gains tax rate is 20%. Including the additional 3.8% Medicare Contribution Tax on net investment income, the top long-term capital gains rate could be 23.8% and the top short-term capital gains tax rate could be as much as 43.4%.
 - Under current law, the complex netting rules have the potential effect of making your long-term capital gains subject to short-term rates, so you must carefully time your security trades to ensure that you receive the full benefit of the lowest capital gains tax rate.
- There may be limitations on the deductibility of your itemized deductions ("Pease" provision) and on the allowable amount of your personal exemptions provision ("PEP") based on your adjusted gross income ("AGI"). Various phaseouts that reduce your deductions and/or exemptions can increase your tax liability and your effective tax rate.
- Consider the impact that the additional Medicare Contribution Tax on net investment income will have on your particular tax situation. Certain direct and indirect expenses, such as margin interest and state taxes, may decrease the surtax and it may make sense to prepay these expenses, even if you are projected to be in the AMT.
- Gift and estate taxes can reduce the amount your beneficiaries will receive by 40% to 50% depending on which state one is a resident of at date of death. However, there are planning techniques and strategies available to maximize the amount of wealth that is preserved for your family.

TAX PLANNING GOALS

Proper tax planning can achieve the following goals:

- Reduce the current year's tax liability.
- Defer the current year's tax liability to future years.
- Reduce any potential future years' tax liabilities.
- Maximize the tax savings from allowable deductions.
- Minimize the effect of the AMT on this year's tax liability.
- Take advantage of available tax credits.
- Maximize the amount of wealth that stays in your family.
- Minimize capital gains tax.
- Minimize the Medicare Contribution Tax on net investment income.
- Avoid penalties for underpayment of estimated taxes.
- Increase availability of cash for investment, business, or personal needs by deferring your tax liability.
- Manage your cash flow by projecting when tax payments will be required.
- Minimize potential future estate taxes to maximize the amount left to your beneficiaries and/or charities (rather than the government).
- Maximize the amount of money you will have available to fund your children's education as well as your retirement.

■ YEAR-END TAX PLANNING TIPS

Tax Tip 1 provides a snapshot of key strategies geared toward helping you achieve your planning goals. It includes ideas to help you reduce your current year's tax as well as ideas to reduce any potential future taxes. While this chart is not all inclusive, it is a good starting point to help you identify planning ideas that might apply to your situation. Keep in mind that many of the strategies involve knowing what your approximate income, expenses and tax rates will be for the current and subsequent years and then applying the applicable tax law for each year to determine the best path to follow. Implementation of many of these ideas requires a thorough knowledge of tax laws, thoughtful planning and timely action.

Timing when you pay deductible expenses and when you receive income (to the extent you have control) can permanently reduce your taxes — especially if you are subject to the AMT in one year but not another. Timing expenses and income can also defer some of your tax liability to next year (or even later years) giving you, rather than the government, use of your money.

To gain the maximum benefit, you need to project, as best you can, your tax situation for the current and subsequent years. This will help you identify your tax bracket for each year and determine whether the AMT will likely affect you in either or both years. Your year-to-date realized long- and short-term capital gains and losses should be included in your projections. Be sure to consider prior-year loss carry forwards (if any). Based on these results, you can decide what steps to take prior to year-end. You will be able to decide whether or not you should prepay deductions and defer income, defer expenses and accelerate income, realize capital losses, or lock in capital gains.

Tax Tip 2 offers basic guidance for deciding when to prepay or defer deductible expenses and when to defer or collect taxable income.

Tax Tip 3 offers steps to follow relating to realized capital gains and/or losses, and the type of gains and losses you should trigger.

STEPS TO TAKE IF THE AMT APPLIES EITHER THIS YEAR OR NEXT

As a general rule, if your year-end projection indicates that you will be in the AMT, it is very important that you do not pay any of the following expenses prior to the end of the year, as they are not deductible in computing your AMT and you will not receive a tax benefit from the deduction:

- State and local income taxes
- Real estate taxes
- Miscellaneous itemized deductions such as investment expenses and employee business expenses

Conversely, if you are not projected to be in the AMT in the current year, you should try to prepay as many of the above expenses as possible to receive the maximum tax benefit. Keep in mind, though, that the more you prepay, the more likely you will end up in the AMT.

EXPENSES YOU CAN PREPAY

Here are the most common deductible expenses you can easily prepay by December 31, if appropriate:

Charitable Contributions

You can deduct charitable gifts of cash and tangible personal property, such as clothing and household goods, up to 50% of your AGI and charitable gifts of appreciated capital gain properties up to 30% of your AGI.

State and Local Income Taxes

If you are not in the AMT this year, you can prepay before December 31 your fourth-quarter estimated state tax payment due on January 15 of the following year, as well as any state income tax you project will be due on April 15 of the following year. You will gain the benefit of a tax deduction in the current year and protect those deductions that could be lost if you fell into the AMT next year. Prepaying these taxes will probably outweigh any lost earnings on the use of the funds. However, be careful that the prepayment itself doesn't put you into the AMT. Prepayment of state income taxes may also reduce the Medicare Contribution Tax to the extent that such taxes are allocated against any investment income. As a result, you may wish to consider such prepayment even if it puts you into the AMT.

Real Estate Taxes

Like state and local income taxes, prepaying next year's real estate taxes prior to year-end can be an especially beneficial strategy should you end up subject to the AMT next year, but not in the current year.

Miscellaneous Itemized Deductions

Miscellaneous itemized deductions are deductible for regular income tax purposes only if they exceed, in the aggregate, 2% of your AGI. Bunching these deductions to gain the most favorable tax result may be a viable strategy, as a tax benefit is received if you are not subject to the AMT. Investment expenses may also reduce the Medicare Contribution Tax on net investment income.

KEY TAX PLANNING STRATEGIES

Situation	Planning idea	Detailed discussion
You have incentive stock options that you can exercise.	<ul style="list-style-type: none"> Consider exercising your options to start the long-term holding period, but only if the spread between the market price of the stock and the exercise price will not put you into the AMT. 	Pg 41
Your passive activity losses exceed your passive income.	<ul style="list-style-type: none"> Dispose of an activity that is generating passive losses in order to deduct the suspended loss on that activity. However, consider the impact of the Medicare Contribution Tax on net investment income on net passive income. 	Pg 52
You would like to make significant charitable contributions.	<ul style="list-style-type: none"> Donate appreciated securities you have held for more than one year. Consider establishing a charitable trust or a private foundation, or take advantage of a donor-advised fund. Consider donating partial interests in certain assets such as a conservation easement, remainder interest in real estate or art work to a museum. 	Pg 61 Pg 63 Pg 62
You need funds for personal use, such as improvements to your home in excess of the mortgage limitations or to pay tax liabilities.	<ul style="list-style-type: none"> Sell marketable securities with little or no appreciation to fund your needs, and then use margin debt to purchase replacement securities. The interest on the debt will be deductible, subject to investment interest limitations. The interest may also reduce the Medicare Contribution Tax on net investment income. Take distributions, if available, from partnerships, limited liability companies, or S corporations on income that you have already paid taxes on. Be sure you have sufficient tax basis and are "at risk" in the entity. 	Pg 70 Pg 28
You want to take advantage of the tax-deferred nature of retirement accounts.	<ul style="list-style-type: none"> Maximize your contributions to your retirement accounts and take advantage of the best plans available to you prior to December 31. 	Pg 74
You expect the value of your IRA to appreciate over time, and you want to position your IRA now so that there will be little or no tax impact when you or your beneficiaries take distributions later.	<ul style="list-style-type: none"> Consider converting your traditional IRA into a Roth IRA in the current year. However, this will cause a current tax liability, since the converted amount is subject to income tax in the year of the conversion. 	Pg 78
You have a sizeable estate and want to protect your assets from estate tax.	<ul style="list-style-type: none"> Make gifts of \$14,000 to each individual in 2014, and again in 2015. Pay beneficiaries' tuition and medical expenses directly to the providers. Use your lifetime gift tax exclusion of \$5.34 million effective for 2014, \$5.43 million effective for 2015; for subsequent years, the exclusion will be indexed for inflation. 	Pg 83
You want to transfer assets to your designated beneficiaries during your lifetime.	<ul style="list-style-type: none"> Create a grantor retained annuity trust ("GRAT"). Set up a family limited partnership ("FLP") or family limited liability company ("FLLC"). Make loans to your beneficiaries at minimum required interest rates. 	Pg 86 Pg 86 Pg 85
You want to provide for your children's and/or grandchildren's qualified education costs.	<ul style="list-style-type: none"> Establish and fund a 529 plan that can grow tax-free as long as you use the funds to pay for qualified education expenses. 	Pg 94
You and your spouse are a legally married same-sex couple.	<ul style="list-style-type: none"> Review your income and estate tax filings to determine if any tax refund claims should be filed. Review and update your estate plan. Review health and retirement plans and Social Security benefits. 	Pg 97

Mortgage Interest

Consider prepaying your mortgage payment for next January in the current year in order to accelerate the deduction.

Margin Interest

Be sure to pay any margin interest before December 31, since interest accrued at year-end is only deductible if actually paid. This may also reduce the Medicare Contribution Tax on net investment income.

Business Equipment

You could have accelerated purchases of business equipment before the end of 2014 to take advantage of expanded expensing allowances, subject to certain limitations. To qualify, the property must be placed in service in the year of the intended deduction. Deductions taken in 2014 were at the more beneficial levels, resulting from the enactment of the Tax Increase Prevention Act of 2014 ("TIPA"). Purchases made in 2015 will be reduced from 2014 levels pending additional action by Congress.

INCOME YOU CAN ACCELERATE OR DEFER

Timing income can be more difficult than timing deductions, but here are some types of income that you may be able to control the timing of receipt so you can gain the advantage of having the income taxed in a year that you are in a lower tax bracket.

Cash Salaries or Bonuses

If you anticipate your current year's income tax rate to be lower than next year's rate, you can accelerate salary or bonuses into the current year. You would need to determine if there are strict limitations on amounts that can be accelerated. However, if next year's rate is lower than your current year's rate, it may make sense to defer such income until next year provided the income is not constructively received (made available to you in the current year).

Consulting or Other Self-Employment Income

If you are a cash-basis business and you anticipate your current year's tax rate to be lower than next year's rate, you can accelerate income into the current year. Otherwise, you would want to defer such income.

tax tip

2

AMT TAX PLANNING STRATEGIES

Nature of deduction or income	You will not be in the AMT this year or next year and next year's tax rate			You are in the AMT*	
	will be the same as the current year or will decrease	will increase	only this year	this year and next year	only next year
Charitable contributions, mortgage interest, investment interest and self-employed expenses	Prepay	Defer	Defer	Prepay	Prepay
State and local income taxes, real estate taxes, and miscellaneous deductions that are not deductible if you are in the AMT	Prepay	Defer	Defer	Defer	Prepay
Income such as bonuses, self-employed consulting fees, retirement plan distributions, and net short-term capital gains (unless you have long-term losses offsetting the gains)	Defer	Collect	Collect	Defer	Defer
Miscellaneous itemized deductions bunched (not deductible for the AMT) into a single year to exceed the 2% AGI income floor	Prepay	Defer	Defer	Defer	Prepay

(**Legend:** Prepay before the end of the current year/Defer into next year or later/Collect before the end of the year)

*The chart assumes your regular tax rate on ordinary income is higher than the maximum AMT rate of 28%.

Retirement Plan Distributions

If you are over age 59 1/2 and your tax rate is low this year, you may consider taking a taxable distribution from your retirement plan even if it is not required, or consider a Roth IRA conversion.

The law that allowed tax-free distributions from individual retirement accounts ("IRAs") to public charities made by individuals age 70 1/2 of up to \$100,000 had been extended through December 31, 2014. The provision allowed an individual to exclude the distribution from income; thereby reducing the limitations based on a percentage of AGI and also reduced state income taxes by reducing state taxable income.

Capital Gains

The following ideas can lower your taxes this year:

- If you have unrealized net short-term capital gains, you can sell the positions and realize the gains in the current year if you expect next year's tax rate to be higher. This may be a good strategy if the gain will be taxed at the AMT rate of 28% this year but at 39.6% next year (exclusive of the additional Medicare Contribution Tax). Only consider this strategy if you do not otherwise intend to hold the position for more than 12 months, making it eligible for the long-term capital gain rate of 20%, exclusive of the additional Medicare Contribution Tax. However, you may be able to apply the netting rule which may

result in the offsetting of long-term losses to short-term gains, resulting in a tax savings of 39.6% rather than 20%.

- Review your portfolio to determine if you have any securities that you may be able to claim as worthless, thereby giving you a capital loss before the end of the year. A similar rule applies to bad debts.
- Consider a bond swap to realize losses in your bond portfolio. This swap allows you to purchase similar bonds and avoid the wash sale rule while maintaining your overall bond positions.
- Similarly, you may consider selling securities this year to realize long-term capital gains that may be taxed at the more favorable rate this year, and then buying them back to effectively gain a step-up in basis. Since the sales are at a gain, the wash sale rules do not apply.

Real Estate and Other Non-Publicly Traded Property Sales

If you are selling real estate or other non-publicly traded property at a gain, you would normally structure the terms of the arrangement so that most of the payments would be due next year. You can use the installment sale method to report the income. This would allow you to recognize only a portion of the taxable gain in the current year to the extent of the payments you received, thereby allowing you to defer much of that tax to future years.

tax tip

3

YEAR-END CAPITAL GAINS AND LOSSES

If you have	Consider taking these steps
Both short-term and long-term losses	Sell securities to recognize unrealized gains, preferably if held short-term, up to the amount of your losses less \$3,000.
Long-term gains in excess of short-term losses	Take losses equal to the net gain, plus \$3,000. Use long-term loss positions first, then short-term loss positions.
Both short-term and long-term gains, or short-term gains in excess of long-term losses	Take losses equal to the net gain, plus \$3,000. Use long-term loss positions first to gain the benefit of offsetting short-term gains (taxed at a rate as high as 39.6% plus 3.8% Medicare Contribution Tax on net investment income).
Worthless securities and bad debts	Identify these securities and debts and take the necessary steps to ensure that the losses are deductible in the current year, by having the proper substantiation.

Note: If you are married filing separately substitute \$1,500 for \$3,000 in the above tip.

U.S. Treasury Bill Income

If you have U.S. Treasury Bills maturing early next year, you may want to sell these bills to recognize income in the current year if you expect to be in a lower tax bracket this year than next year.

BUNCHING DEDUCTIONS

Bunching miscellaneous itemized deductions from two different years into a single year may allow you to exceed the 2% AGI limitation that applies to these deductions. If you have already exceeded the 2% floor, or will do so by prepaying some of next year's expenses now, prepay the following expenses by December 31 (assuming you will not be in the AMT this year):

Investment Expenses

These include investment advisory fees, custody fees, and investment publications. Such expenses may also reduce the Medicare Contribution Tax on net investment income.

Professional Fees

The most common of these fees relate to income, gift, and estate tax planning; tax return preparation; accounting; and legal expenses (to the extent deductible).

Unreimbursed Employee Business Expenses

These include business travel, meals, entertainment, vehicle expenses and publications, all exclusive of personal use. You must reduce expenses for business entertainment and meals (including those while away from home overnight on business) by 50% before the 2% floor applies.

Medical Expenses

These expenses are deductible only if they exceeded 10% of your AGI (also 10% for AMT purposes). The threshold is at 7.5% of AGI for any tax year beginning before January 1, 2017 for taxpayers who have attained age 65 before the close of such year. Therefore, bunching unreimbursed medical expenses into a single year could result in a tax benefit. Medical expenses include health insurance and dental care. If you are paying a private nurse or a nursing home for a parent or other relative, you can take these expenses on your tax return even if you do not claim the parent or relative as your dependent, assuming you meet certain eligibility requirements.

ADJUST YEAR-END WITHHOLDING OR MAKE ESTIMATED TAX PAYMENTS

If you expect to be subject to an underpayment penalty for failure to pay your current-year tax liability on a timely basis, consider increasing your withholding and/or make an estimated tax

payment between now and the end of the year in order to eliminate or minimize the amount of the penalty.

UTILIZE BUSINESS LOSSES OR TAKE TAX-FREE DISTRIBUTIONS

It may be possible to deduct losses that would otherwise be limited by your tax basis or the "at risk" rules. Or, you may be able to take tax-free distributions from a partnership, limited liability company or S corporation if you have tax basis in the entity and have already been taxed on the income. If there is a basis limitation, consider contributing capital to the entity or making a loan under certain conditions. See further discussion in the chapter on business owners.

PASSIVE LOSSES

If you have passive losses from a business in which you do not materially participate that are in excess of your income from these types of activities, consider disposing of the activity. The tax savings can be significant since all losses become deductible when you dispose of the activity. Even if there is a gain on the disposition, you can receive the benefit of having the long-term capital gain taxed at 23.8% inclusive of the Medicare Contribution Tax with all the previously suspended losses offsetting ordinary income at a potential tax benefit of 43.4% inclusive of the Medicare Contribution Tax.

INCENTIVE STOCK OPTIONS

Review your incentive stock option plans ("ISOs") prior to year-end. A poorly timed exercise of ISOs can be very costly since the spread between the fair market value of the stock and your exercise price is a tax preference item for AMT purposes. If you are in the AMT, you will have to pay a tax on that spread, generally at 28%. If you expect to be in the AMT this year but do not project to be next year, you should defer the exercise. Conversely, if you are not in the AMT this year, you should consider accelerating the exercise of the options; however, keep in mind to not exercise so much as to be subject to the AMT.

ESTATE PLANNING

If you have not already done so, consider making your annual exclusion gifts to your beneficiaries before the end of the year. You are allowed to make tax-free gifts of up to \$14,000 per year, per individual (\$28,000 if you are married and use a gift-splitting election, or \$14,000 from each spouse if the gift is funded from

his and her own separate accounts). By making these gifts, you can transfer substantial amounts out of your estate without using any of your lifetime exclusion. Also, try to make these gifts early in the year to transfer that year's appreciation out of your estate. The annual exclusion for gifts in 2015 remains unchanged at \$14,000. You could gift \$14,000 to an individual in 2014 and another \$14,000 to the same individual in 2015 and not incur any gift taxes. Again, this benefit is doubled if you are married and use the gift-splitting election. Furthermore, because of the increased lifetime gift exclusion, you may wish to make additional gifts to fully utilize such exclusion of \$5.34 million each (\$10.68 million for married couples) in 2014. The 2015 lifetime gift exclusion has been increased by \$90,000 to \$5.43 million each (\$10.86 million for married couples). When combined with other estate and gift planning techniques such as a grantor retained annuity trust, tax planning strategies may enable you to avoid estate and gift taxes and transfer a great deal of wealth to other family members (who may be in a lower income tax bracket or may need financial assistance).

TAX STRATEGIES FOR BUSINESS OWNERS

Timing of Income and Deductions

If you are a cash-basis business and expect your current year's tax rate to be higher than next year's rate, you can delay billing until January of next year for services already performed in order to take advantage of the lower tax rate next year. Similarly, even if you expect next year's rate to be the same as this year's rate, you should still delay billing until after the year-end to defer the tax to next year. Alternatively, if you expect to be in a higher tax bracket next year, or if you expect to be in the AMT this year, you can accelerate billing and collections into the current year to take advantage of the lower tax rates.

You also have the option to prepay or defer paying business expenses in order to realize the deduction in the year that you expect to be subject to the higher tax rate. This can be particularly significant if you are considering purchasing (and placing in service) business equipment. If you are concerned about your cash flow and want to accelerate your deductions, you can charge the purchases on the company's credit card. This will allow you to take the deduction in the current year when the charge is made, even though you may not actually pay the outstanding credit card bill until after December 31.

Business Equipment

Tax benefits are available for immediate deduction of business equipment purchased and placed in service in 2014. The amount allowable for full deduction in 2014 under Section 179 is \$500,000 (\$25,000 in 2015) if property placed in service does not exceed

\$2,000,000 (\$200,000 in 2015). The 50% bonus depreciation has been extended for 2014 only.

Business Interest

If you have debt that can be traced to your business expenditures — including debt used to finance the capital requirements of a partnership, S corporation or LLC involved in a trade or business in which you materially participate — you can deduct the interest “above-the-line” as business interest rather than as an itemized deduction. The interest is a direct reduction of the income from the business. This allows you to deduct all of your business interest, even if you are a resident of a state that limits or disallows all of your itemized deductions.

Business interest also includes finance charges on items that you purchase for your business (as an owner) using the company's credit card. These purchases are treated as additional loans to the business, subject to tracing rules that allow you to deduct the portion of the finance charges that relate to the business items purchased. Credit card purchases made before year-end and paid for in 2015 are allowable deductions in 2014 for cash basis businesses.

Conclusion

Now more than ever, effective tax planning is crucial if one is to achieve certain financial goals and realize tax savings.

tax rate overview

As a result of the American Taxpayer Relief Act of 2012 ("ATRA"),
the effective rate of federal tax on income ranged from 0% to 56%.

As a result of ATRA, the Bush-era tax cuts were extended and made permanent for married taxpayers with taxable income below \$457,600 in 2014 (\$464,850 in 2015) and single taxpayers with income below \$406,750 in 2014 (\$413,200 in 2015). These amounts will be adjusted for inflation in the future.

The rate of tax you pay on your income — as well as the benefit you receive from your deductions — can vary from no tax at all to a rate of approximately 56% depending on many factors, including:

- What is the nature of your income? Is it ordinary income, qualifying dividend income or net long-term capital gain income?
- Are you losing the advantage of the lower long-term capital gains rate because of netting rules?
- Are you subject to the AMT?
- Are you subject to the Medicare Contribution Tax on net investment income?
- Are you subject to the Medicare Wage Surcharge?
- Is any of your income subject to self-employment tax?
- How much of your miscellaneous itemized deductions and total itemized deductions are being limited?
- Are your personal exemptions being phased out?
- Is any of your income eligible to be excluded from your taxable base?
- Are credits available to offset your tax?

The most common federal tax rates (exclusive of the Medicare Contribution Tax on net investment income) are:

- 20% for net long-term capital gains and qualified dividends for married taxpayers with taxable income over \$457,600 (\$406,750 for single filers).
- 28% for ordinary income subject to the AMT.
- For 2014, 39.6% maximum rate for ordinary income, including short-term capital gains for married taxpayers with taxable income over \$457,600 (\$464,850 in 2015) and \$406,750 for single filers (\$413,200 in 2015).
- The top rate for the first \$117,000 of wages earned in 2014 (\$118,500 in 2015) is 48% and 56% for self-employment income. The portion of Social Security FICA tax that employees

pay remains unchanged at 6.2% on the first income listed herein (12.4% for self-employed individuals). The Medicare portion of the FICA tax remains unchanged at 1.45% on all income earned for employees. For the self-employed, the rate is 2.9% of all self-employment income. Also, there is the additional 0.9% additional Medicare tax paid by those earning more than \$200,000.

ORDINARY INCOME RATES

Ordinary income primarily includes wages, business and self-employment income, interest income, nonqualifying dividend income, taxable retirement plan distributions, rental income, taxable Social Security benefits, alimony, and your distributive share of ordinary income passing through to you from a partnership, limited liability company or S corporation.

Net short-term capital gains are subject to the same rate as ordinary income and, therefore, could be taxed at a rate as high as 43.4%, inclusive of the Medicare Contribution Tax on net investment income. Chart 1 shows the different tax brackets that apply to ordinary income in 2014 and 2015 for married filing jointly and single taxpayers.

CAPITAL GAIN AND DIVIDEND INCOME RATES

Long-term capital gains and qualified dividend income are eligible to be taxed at lower maximum tax rates than ordinary income. This is discussed in detail in the chapter on capital gains and losses. But here are the basic rules:

Net long-term capital gains are taxed at a maximum rate of 20% (if your taxable income exceeds certain thresholds) for both the regular tax and the AMT — with several notable exceptions to be discussed in the chapter on capital gains and losses. In some cases, the former 15% rate may still apply. To benefit from long-term capital gains treatment, you must have held the asset for more than 12 months. There is an additional 3.8% Medicare Contribution Tax on net investment income, including net long-term capital gains.

For 2014, dividends received from most domestic corporations and qualified foreign corporations are taxed at the same 15% rate that applies to net long-term capital gains (20% for married taxpayers with taxable income over \$457,600 (\$464,850 in 2015) and \$406,750 (\$413,200 in 2015) for single filers). Dividends that do not qualify for the preferential rate of 15% (or 20%), such as dividends from a money market fund or nonqualified foreign corporations, are subject to the higher ordinary income tax rates. There is an additional 3.8% Medicare Contribution Tax on net investment income that will also apply to dividend income.

411,500	119,401.25	35%
413,200	119,996.25	39.6%

Note: See Appendix B for detailed 2014 tax rate schedules, including tax rates for married taxpayers filing separately and taxpayers filing as head of household. See Appendix C for detailed 2015 tax rate schedules, including tax rates for married taxpayers filing separately and taxpayers filing as head of household.

ALTERNATIVE MINIMUM TAX

Ordinary income subject to the AMT is taxed at a maximum rate of 28%. As mentioned above, the 15% or 20% rate on net long-term capital gains and qualified dividends also applies to the AMT. While the AMT rate on ordinary income is lower than the highest regular tax rate of 39.6%, it usually applies to a higher taxable income base and frequently results in a greater tax. This is especially true if you live in a state with high income tax rates and high real estate taxes, and/or you have significant investment expenses in excess of 2% of your AGI, since these deductions are not allowed in computing your AMT. See the chapter on the AMT for a more detailed discussion.

KIDDIE TAX

The unearned income of a child under age 19, or a full-time student under age 24, is generally taxed at the parents' tax rate. This is designed to lessen the effectiveness of intra-family transfers of income-producing property that would shift income from the parents' higher marginal tax rate to the child's generally lower tax rate. For 2014, the first \$1,000 (\$1,050 for 2015) of the child's unearned income is tax free. The next \$1,000 (\$1,050 for 2015) is taxed at

the child's marginal rate. Any excess of unearned income above \$2,000 (\$2,100 in 2015) is then taxed at the parents' marginal rate (assuming the parents' rate is higher than the child's). To the extent that the child has earned income such as wages, that income is taxed at the child's marginal rate. Unearned income such as net long-term capital gains and qualifying dividend income is eligible for the preferential tax rate of 15% or 20% to the extent that rate applies to the parents' income. The child may also be subject to the Medicare Contribution Tax on net investment income (see below).

EMPLOYMENT TAXES

Your wages and self-employment income are also subject to Social Security and Medicare taxes. The amount of income subject to the Social Security tax is limited (see Chart 2), but all earned income is subject to the Medicare Contribution Tax.

If you are self-employed, your share of Social Security and Medicare taxes almost doubles because you pay both the employer's and employee's portions of these taxes. As a result, for 2014, the federal effective tax rate on self-employment income can be as high as 56% on the first \$117,000 of such income, compared to about 48% for income from wages (after including your employee share

chart

2

SOCIAL SECURITY AND MEDICARE TAXES FOR 2014 AND 2015

Maximum Income Subject to Tax			Tax Rates/Maximum Tax Cost	
			Employer and Employee Portion	Self-Employed
Social Security	2014	\$117,000	6.2%/\$7,254 each	12.4%/\$14,508
	2015	\$118,500	6.2%/\$7,347 each	12.4%/\$14,694
Medicare	2014	No limit	1.45%/No limit 2.35%/No limit**	2.678%/No limit* 3.578%/No limit**
	2015	No limit	1.45%/No limit 2.35%/No limit**	2.678%/No limit* 3.578%/No limit**

* The tax rate is actually 2.9%, but only 92.35% of self-employment income is subject to the Medicare Tax.

**Includes 0.9% Hospital Insurance Tax for amounts above certain income thresholds.

of Social Security and Medicare taxes). The reason there is not a greater spread is primarily because you receive a deduction against AGI for 50% of the self-employment tax you pay.

MEDICARE WAGE SURTAX

An additional 0.9% Hospital Insurance Tax applies to earned income. This tax applies to wages and/or self-employment income in excess of \$250,000 for married couples filing joint returns, \$125,000 for married filing separate returns and \$200,000 for all other taxpayers. The threshold amounts are not indexed for inflation.

MEDICARE CONTRIBUTION TAX ON NET INVESTMENT INCOME

The Health Care and Education Reconciliation Act of 2010 provided for a 3.8% tax on net investment income of higher income taxpayers for years beginning in 2013.

The additional 3.8% tax will apply if your AGI (with certain modifications) is in excess of \$250,000 for a joint return, \$200,000 if single, and \$125,000 if married filing separate. The tax will apply to the lesser of your net investment income or your AGI in excess of the applicable threshold amounts stated above. Net investment income includes interest, dividends, capital gains, annuities, royalties, rents, income from passive business activities and income from trading in financial instruments or commodities. The amount of gross investment income may be reduced by expenses associated with earning that income. Such expenses include directly allocable state and local taxes, investment advisory fees (over 2% of AGI), and investment interest expenses.

The maximum federal tax rate on long-term capital gains and qualified dividends will be 23.8% (20% plus 3.8% additional Medicare Contribution Tax on net investment income). The threshold amounts are not indexed for inflation.

ITEMIZED DEDUCTIONS AND PERSONAL EXEMPTIONS

Reduction of miscellaneous itemized deductions

You must reduce certain miscellaneous itemized deductions by 2% of your AGI. The deductions subject to the 2% disallowance include investment advisory fees, unreimbursed employee business expenses, professional dues and subscriptions, tax return preparation fees and deductible legal expenses.

Reduction of itemized deductions

For 2014, the reduction of itemized deductions affects married taxpayers with AGI over \$305,050 (\$309,900 in 2015) and single taxpayers with AGI over \$254,200 (\$258,250 in 2015). Certain itemized deductions are to be reduced by the lesser of 3% of the amount by which AGI exceeds a certain limit or 80% of the itemized deductions subject to the reduction rules.

Personal exemptions

The personal exemption amount ("PEP") for 2014 is \$3,950 (\$4,000 in 2015) for each of your qualifying dependents. The 2014 PEP begins to phase out for married taxpayers with AGI over \$305,050 (\$309,900 in 2015) and single taxpayers with AGI over \$254,200 (\$258,250 in 2015).

estimated tax requirements

A penalty will apply if a taxpayer fails to make sufficient estimated tax payments during the year. The appropriate combination of quarterly estimated tax payments and withholdings on wages (and certain other income) can enable the taxpayer to avoid this penalty. Proper tax planning may help you minimize the required estimated tax payments and avoid the underpayment penalty.

AVOIDING THE PENALTY

You will not owe the penalty for the underpayment of estimated taxes if the amount of taxes you pay (through withholding and/or timely paid estimated tax payments) is the lesser of:

- 90% of the actual tax shown on your current year's tax return, or
- 110% of the tax on your prior year's tax return based on a safe harbor exception (100% if the AGI on your prior year's return was \$150,000 or less, or \$75,000 if married filing separately), or
- 90% of your actual tax for the current year based on the annualized income installment method (see Tax Tip 4).

The penalty is determined on a quarterly basis combining the withholding tax and timely paid quarterly estimated taxes. You may still owe the penalty for an earlier due date shortage, even if you pay the tax in later quarters to make up the underpayment. It may be possible to avoid this situation by using the annualized income installment method (see Tax Tip 4). Alternatively, you may increase withholding taxes to be applied evenly throughout the year.

WHAT'S NEW FOR 2014?

When estimating your income tax liability, make sure to consider the following changes commencing for tax years beginning in 2014:

- **Tax rates.** For 2014 and subsequent years the individual income tax rates will remain at 10, 15, 25, 28, 33, 35 and 39.6% for ordinary income. The top rate for long term capital gains and qualified dividends will remain at 20%. The applicable threshold

amounts for the 2014 top tax rates are: \$457,600 for married filing jointly; \$432,200 for head of household; \$406,750 for single; and \$228,800 for married filing separately.

- **Personal exemption phaseouts.** For tax years beginning in 2014, the personal exemption amount is increased to \$3,950 for taxpayers with AGI at or below \$305,050 if married filing jointly, \$279,650 if head of household, \$254,200 if single, or \$152,525 if married filing separately. The personal exemption amount for taxpayers with AGI above these amounts may be reduced.
- **AMT exemption amount increased.** The AMT exemption amount, which is indexed annually for inflation, has increased to \$52,800 in 2014 for single taxpayers, \$82,100 for married filing jointly and \$41,050 if married filing separately.
- **Increase in employee's share of payroll tax.** For 2014, employee's wages up to the Social Security limitation of \$117,000 were withheld at the rate of 6.2%. For 2015, the Social Security limitation is at \$118,500. There is no change in Medicare withholding.
- **Lifetime learning credit income limits increased.** For 2014, in order to claim the maximum lifetime learning credit, modified AGI must be less than \$54,000 (\$108,000 if married filing jointly). Modified AGI above these levels gradually phases out the credit, with no credit available for AGI in excess of \$64,000 (\$128,000 for married joint filers).
- **Tax benefits extended.** Some special tax incentives known as "extenders" had expired after 2013. However, these provisions have been reinstated retroactively for 2014 only, as a result of TIPA:

tax tip

4

USE THE ANNUALIZED INCOME INSTALLMENT METHOD TO REDUCE YOUR QUARTERLY ESTIMATES AND ELIMINATE THE UNDERPAYMENT OF ESTIMATED TAX PENALTY

The annualized income installment method is a pay-as-you-go method to calculate the required quarterly estimated tax payments.

You may receive income, such as business income, bonuses and capital gains, unevenly throughout the year. If you expect to earn more income in the latter part of 2015 than in the first months of the year, or pay deductible expenses earlier in the year, you can reduce your quarterly estimated tax payments by paying the tax based on actual quarterly tax projections. This method provides a way to pay less estimated tax than the safe harbor method based

on 110% (or 100% if applicable) of your actual prior year tax for the quarter with lower income. If your income changes in a subsequent quarter, you may increase or decrease the future estimated tax payments accordingly.

You can also use the annualized income method to reduce a potential penalty on your 2015 return. If the safe harbor exception based on 110% of your 2014 tax or 90% of your actual 2015 tax does not eliminate the penalty, you can still use the annualized income method when preparing your 2015 return to reduce or eliminate the penalty.

1. IRA distributions to a qualified charitable organization. Up to a maximum of \$100,000 per taxpayer will be tax free if the distribution from an IRA account to a public charity is made by a taxpayer age 70 1/2 or older. This special distribution will satisfy the minimum distribution requirements.
 2. Work Opportunity tax credit for unemployed veterans.
 3. Deduction for qualified tuition and related expenses.
 4. Nonbusiness energy credits.
 5. Exclusion from income the cancellation of indebtedness of up to \$2 million on a qualified principal residence.
- Increase your estimated tax payment to eliminate the penalty for the fourth quarter.
 - Lower your taxable income (if otherwise desirable) by using the year-end tax planning strategies presented in this guide to reduce the quarterly underpayment.
 - Eliminate or mitigate the underpayment by using the annualized income installment method.

OTHER TAX CONSIDERATIONS

- **Additional Medicare Tax on Earned Income.** A 0.9% additional Medicare tax applies to Medicare wages and self-employment income. This additional Medicare tax applies to income over the threshold of \$250,000 for married filing jointly and \$200,000 for any other filing status (\$125,000 for married filing separately).
- **Net Investment Income Tax (NIIT).** There is a surtax of 3.8% on the lesser of net investment income or the excess of modified AGI over the threshold amount. The threshold amount is \$250,000 for joint filers or a surviving spouse (\$125,000 for married filing separately) and \$200,000 for any other filing status.

Caution: *If you withdraw money from an IRA and have taxes withheld, you will need to replenish the IRA within 60 days with the gross amount withdrawn, not just the net amount (i.e., assuming you still want the money in a tax-deferred retirement account).*

As part of year-end planning, you should consider the current penalty rates. If the penalty rates are relatively low (which has been the case in recent years) and the cash can be invested at higher rates, it may be more cost efficient to just pay the penalty.

STATE TAX CONSIDERATIONS

The foregoing discussion of tax planning suggestions may also apply to state and local income tax penalties.

YEAR-END PLANNING ACTIONS

If your year-end planning indicates that you have already met the 90% test, you may not need to pay some or all of your fourth quarter estimated tax installment.

If you realize before year-end that you may owe the penalty for underpayment of estimated tax, you can still reduce or eliminate your penalty by taking one or more of the following actions:

- Pay more tax through salary or other withholdings. Since any tax paid through withholdings will be presumed to have been paid evenly throughout the year, an individual may increase his or her withholding tax before year-end to minimize the underpayment tax penalty attributable to a prior quarter. There are several ways to achieve this:
 1. Increase your W-2 withholding tax for the remaining pay periods this year.

alternative minimum tax

The AMT was designed to prevent wealthy taxpayers from using tax loopholes to avoid paying taxes. Because historically the exemption from the AMT has not been automatically adjusted for inflation and certain common deductions were not allowed in computing the AMT, millions of middle class taxpayers were finding themselves subject to the AMT. However, Congress provided some annual relief in the recent past by installing “AMT patches” which increased the AMT exemption.

ATRA permanently increased the AMT exemption beginning in 2012 and provided for indexing of the exemption for 2013 and beyond. Since ATRA increased income tax rates for certain taxpayers beginning in 2013, fewer people may be subject to the AMT while paying a higher overall rate. Proper planning requires a two-year analysis in order to determine the true benefits you can achieve.

WHAT TRIGGERS THE AMT?

The AMT is computed separately from your regular tax. Using your regular taxable income as a starting point, adjustments are made to arrive at your alternative minimum taxable income ("AMTI"). Many deductions and tax credits that are used to calculate your regular tax are not deductible or allowable in computing AMTI. So, even though the AMT maximum tax rate is less than the regular maximum tax rate, your AMT liability may be higher than your regular tax. You will pay the higher of the regular tax or the AMT.

Chart 3 shows most of the adjustments necessary to calculate your AMTI. As the chart illustrates, certain deductions, such as state and local income taxes and real estate taxes, are not deductible when computing your AMTI. Other deductions, such as depreciation on business property, may be different for regular tax and AMT purposes. And some forms of income are exempt for regular tax purposes but taxable for AMT purposes. One example is the exercise of incentive stock options to the extent the fair market value exceeds the exercise price.

Tax Tip 5 demonstrates the high cost of being in the AMT.

Tax Tip 6 explains how state taxes on long-term capital gains and qualified dividends may trigger the AMT.

PRIVATE ACTIVITY BOND INTEREST

Tax-exempt interest on specified private activity bonds issued in 2009 and 2010 are no longer an item of tax preference and, therefore, not subject to the AMT. However, the interest on such bonds issued before 2009 and after 2010 is still subject to the AMT.

AMT RATES

For 2014, the 28% maximum tax rate applies to ordinary AMTI in excess of \$182,500 for joint returns and unmarried individuals (\$185,400 for 2015) and \$91,250 if married filing separately (\$92,700 for 2015) net of any allowable exclusion. Ordinary AMTI of \$182,500 or less is subject to a tax rate of 26%. Net long-term capital gains and qualified dividends are taxed at the same maximum 20% rate for both the AMT and regular tax beginning in tax year 2013.

AMT EXEMPTION

Beginning in 2013, the exemption amount is indexed for inflation. For 2014, you are allowed an AMT exemption of up to \$82,100 (\$83,400 for 2015) if married filing jointly, \$52,800 (\$53,600 for

2015) if filing single or head of household or \$41,050 (\$41,700 for 2015) if married filing separately. Exemptions are fully phased out for taxpayers when their AMTI reaches \$484,900 (married filing jointly), \$328,500 (single or head of household) or \$242,450 (married filing separately).

Be advised that while you are in the AMT exemption phase out range, your marginal AMT tax rate can be as high as 35%.

PLANNING FOR AMT SCENARIOS

Tax planning can help you determine whether or not you will be subject to the AMT. This can enable you to take steps to reduce your overall tax liability. Using Chart 3 to guide you, here are three possible AMT scenarios to plan for:

You are subject to the AMT in the current year, but don't expect to be next year:

- Defer until the following year any deductions that are not deductible for AMT purposes. Avoid the pitfall of automatically prepaying your state income taxes before the end of the year.
- Taxpayers with large itemized deductions that are disallowed for AMT but considered a direct expense that can be deducted when computing net investment income may want to consider taking such deductions in the current year, even if in the AMT. Expenses such as state and local taxes paid, investment fees, etc., are directly allocable to net investment income and can be used to lower the 3.8% surtax even if the deductions are not allowed for AMT purposes.
- Accelerate ordinary income into the current year to benefit from the lower AMT rate.
- Realize net short-term capital gains this year to benefit from the lower AMT rates, unless these gains will offset short-term losses next year or would otherwise be held long term.
- Delay exercising any incentive stock options ("ISOs") since you could wind up paying the AMT on the spread between the fair market value and the exercise price. If you already exercised the options, consider a disqualifying disposition as discussed in the chapter on stock options. Also, see the rule discussed later in this chapter that may offer some credit relief for the AMT resulting from the exercise of ISOs.

tax tip

5

THE HIGH COST OF THE AMT

Failing to consider the AMT and incorrectly timing the payment of some of your deductions can be costly. Let's say that before December 31, 2014, you paid the following expenses:

- \$15,000 state estimated fourth quarter tax payment (due January 15, 2015),
- \$10,000 in real estate taxes (not due until January, 2015), and
- \$20,000 in charitable contributions that you could have delayed until 2015.

Income	Regular Tax After Year-End Payments	AMT
Earned income	\$ 200,000	\$ 200,000
Qualifying dividends	25,000	25,000
Long-term capital gains	175,000	175,000
Total income	\$ 400,000	\$ 400,000
Deductions		
State & local income taxes	\$ 100,000	\$ 0
Real estate taxes	20,000	0
Mortgage interest	50,000	50,000
Contributions	40,000	40,000
Investment advisory fees	25,000	0
Disallowance of advisory fees (2% of AGI)	(8,000)	0
3% AGI Floor	(2,849)	0
Net itemized deductions	\$ 224,151	\$ 90,000
Personal exemptions (married with 2 children) (after phaseouts)	3,792	0
Taxable income	\$ 172,057	\$ 310,000
Federal tax	\$ 14,739	\$ 36,162
Medicare Contribution Tax on net investment income	5,054	5,054
Total federal tax (including Medicare Contribution Tax on net investment income)	\$ 19,793	\$ 41,216

Because you must pay the higher of the two taxes, your tax will be \$41,216 — that's \$21,423 of AMT tax in excess of your regular tax. Therefore, you lost the full benefit from the prepayment of your state estimated tax and real estate taxes, as well as some of the benefit of prepaying charitable contributions.

You are not subject to the AMT in the current year and will be taxed at the regular tax rate of 39.6% but expect to be subject to the AMT next year:

- Prepay deductions that are not deductible for AMT purposes to get the full tax benefit in the current year rather than lose the tax benefit next year.
- Prepay your fourth-quarter state and local income tax estimate by December 31, as well as any projected remaining balance due on your current year's state/local income tax return that you would otherwise pay on April 15 of the following year.
- Prepay deductions that are deductible against the AMT, such as charitable contributions, to gain the benefit of the higher ordinary tax rate in the current year.
- Defer ordinary income, such as bonuses if possible, to the following year to take advantage of the lower AMT rate.
- Review your ISO awards to determine if you can exercise any shares before the end of the year. The exercise will be tax-free this year up to the extent of the break-even point between your regular tax and the AMT. In the following year, any exercises will result in an AMT liability based on the fair market value of the shares at the time of exercise over the exercise price.

You are not subject to the AMT in either year:

- You have avoided the AMT, but you still want to reduce your regular tax liability in the current year. Turn to the chapter on tax planning strategies for year-end planning ideas that can minimize your tax exposure.

AMT CREDIT CAN REDUCE FUTURE TAXES

If you pay the AMT, you may be entitled to a tax credit against your regular tax in a subsequent year. You qualify for an AMT credit based on "deferral items" that contributed to your AMT liability. The most common deferral items are depreciation adjustments, passive activity adjustments and the tax preference on the exercise of ISOs. Other deductions, such as state and local income taxes and investment fees, are called exclusion items. You cannot get an AMT credit from these deductions. The AMT illustrated in Tax Tip 5 would not create an AMT credit since none of the adjustments are deferral items.

The reason a deduction is classified as a deferral item is because over time you will end up with the same total deductions for both regular tax and AMT purposes. As an example, a depreciation difference is a deferral item if it is calculated using a different asset life and method for AMT purposes then used for regular tax purposes. However, over the life of the asset the total depreciation will be the same under either tax computation.

tax tip

6

LONG-TERM CAPITAL GAINS AND QUALIFYING DIVIDEND INCOME CAN PUT YOU INTO THE AMT

Long-term capital gains and qualifying dividend income can cause you to be subject to the AMT, even though both are taxed at the maximum tax rate of 20% for regular tax purposes and for the AMT. The reason for this is that when you pay state and local taxes on the income, which reduces your regular tax liability, these taxes are not deductible in computing your AMT. Therefore, your AMT taxable income is higher than your regular taxable income.

As an example, let's say you file a joint return and your income only included a long-term capital gain of \$600,000 and, as a New York City resident, your state and city income tax was \$60,000. Ignoring all other deductions, exemptions, phaseouts and rate differentials, your regular taxable income would be \$540,000 after the \$60,000 deduction. At the maximum tax rate of 20%, your regular tax would be \$108,000. Your AMT liability would be \$120,000 (\$600,000 taxed at the same maximum rate of 20%) because you are not allowed a deduction for state and local income

taxes. Therefore, you would pay the higher of the two taxes (an additional cost of \$12,000). Keep in mind that not all of the long-term capital gains (regular or AMT) will be taxed at the 20% rate, since there is also a 15% rate applied up to certain income thresholds.

If you find yourself in this tax situation, avoid paying your state and local income taxes in the year of the sale. To the extent possible, consider deferring the payments until next year if there is a possibility that you will not be in the AMT and you may therefore receive a federal tax benefit.

Keep in mind that if you are subject to the Medicare Contribution Tax on net investment income, consideration should be given to paying expenses that are allocable in arriving at net investment income even if they are not deductible for AMT purposes.

chart

3

AMT VS. REGULAR TAX

Description	Deductible in Computing		Taxable for AMT Only	Other AMT Differences
	Regular Tax	AMT		
State and local income taxes (non-business)	■			
Real estate taxes (personal)	■			
Qualified Motor Vehicle Tax (State or local sales tax or excise tax on purchase)	■			
Investment interest expense	■	■		
Charitable contributions	■	■		
Investment advisory fees	■			
Employee business expenses (W-2)	■			
Mortgage interest on: <ul style="list-style-type: none"> ■ Qualified acquisition and equity debt up to \$1,000,000 used to buy, build, or improve your residence ■ Equity debt (up to \$100,000) not used to improve your residence <p>Note: Interest on acquisition debt in excess of \$1 million and equity debt over \$100,000 is not deductible as mortgage interest, but the debt is subject to the interest tracing rules to determine if deductible as interest on other debt, such as investment interest.</p>	■ ■	■		
Medical expenses in excess of 10% of AGI*	■	■		
Exercise of incentive stock options (to the extent the fair market value exceeds the exercise price)			■	
Depreciation (subject to different AMT rules)				■
Gain or loss on disposition of certain assets, including sale of small business stock				■
Passive activity adjustments				■
Interest on private activity bonds issued before 2009 and after 2010				■
Net operating losses (subject to different AMT rules)				■

*For regular tax purposes, the medical expense threshold is 7.5% for any tax year beginning after December 31, 2012 and before January 1, 2017 for taxpayers who have attained age 65 for close of such year.

business owner issues and depreciation deductions

Individuals who are owners of a business, whether as sole proprietors or through a partnership, limited liability company or S corporation, have specific tax planning opportunities available to them.

TAX ADVANTAGES FOR BUSINESS OWNERS

If you are a self-employed individual, or own an interest in an operating business through a partnership, limited liability company ("LLC"), or S corporation, there may be additional tax planning opportunities available to you. Unlike a salaried employee, your business deductions can offset your AGI rather than be treated as itemized deductions subject to various limitations and disallowances. This chapter deals with some of the tax planning ideas you should consider.

TIMING OF INCOME AND DEDUCTIONS

If you are a cash-basis business, you can delay billing until January of the following year for services already performed, thereby deferring your tax until next year. Alternatively, if you expect to be in a higher tax bracket in the following year, or if the AMT applies in the current year but is not expected to apply in the following year, you can accelerate billing and collections into the current year to take advantage of the lower tax rate.

Similarly, you can either prepay or defer paying business expenses so the deduction comes in the year you expect to be subject to the higher tax rate. This can be particularly significant if you are considering purchasing (and placing in service) business equipment, as the next section discusses. If you are concerned about your cash flow and want to accelerate your deductions, you can charge them on your credit card. This will allow you to take the deduction in the current year, when the charge is made, even though you may actually pay the outstanding credit card bill in January of the following year.

Another advantage of deferring income or prepaying expenses is that you can defer the 2.9% Medicare component of your self-employment taxes. If your self-employment income plus wages are below \$117,000 in 2014 (\$118,500 in 2015), you can also reduce the Social Security tax.

Caution: *You should also consider the impact of the imposition of the additional 3.8% Medicare Contribution Tax on net investment income and the 0.9% Health Insurance Tax on earned income.*

BUSINESS EQUIPMENT

Significant tax benefits which had been in place have been extended to the end of 2014. In addition, the previous 50% bonus depreciation has also been extended to December 31, 2014. Both provisions are resulting from the enactment of TIPA.

Section 179 expensing rules allow you to fully deduct up to \$500,000 of qualifying property placed in service during 2014. This dollar limit is phased-out when total investments exceed \$2,000,000. For 2015, you can expense up to \$25,000 of qualifying property. However, this rule only applies if the total amount of qualifying property placed in service does not exceed \$200,000.

Observation: *The basis of property for which a section 179 election is made is reduced by the amount of the section 179 deduction. The remaining basis is depreciable under the normal rules, including eligibility for bonus depreciation.*

Bonus depreciation of 50% of the adjusted basis of qualifying property (which cannot be used property) purchased and placed in service before January 1, 2015 can be taken.

BUSINESS INTEREST

If you have debt traced to your business expenditures — including debt used to finance the capital requirements of a partnership, S corporation or LLC involved in a trade or business in which you materially participate — you can deduct the interest as business interest rather than as an itemized deduction. The interest is a direct reduction of the income from the business. This lets you deduct all of your business interest. You will need to check your particular state, as it may vary as to which states allow this deduction.

Business interest also includes finance charges on items that you purchase for your business (as an owner) using your credit card. These purchases are treated as additional loans to the business, subject to tracing rules that allow you to deduct the portion of the finance charges that relate to the business items purchased.

HOME OFFICE DEDUCTIONS

When you use part of your home for business, you may be able to deduct the business portion of the costs of running your home, such as real estate taxes, mortgage interest, rent, utilities, insurance, painting, repairs and depreciation. The home office deduction is available to both renters and homeowners, but is subject to an overall limitation that will prevent you from deducting a net loss from your business resulting from your home office deductions.

Generally, you must meet the following two requirements to qualify for the home office deduction:

- You must regularly use part of your home exclusively for a trade or business. Incidental or occasional business use is not regular use. "Exclusive use" means a specific area of your home is used only for trade or business activities.
- The home office must be your principal place of business. This requirement can be satisfied if the home office is used for the administrative or management activities of your business and there is no other fixed location where you can conduct these activities.

If you deduct depreciation for a home office in your principal residence, your ability to fully use the taxable gain exclusion on the sale of a principal residence will be limited since the portion of the gain attributable to your home office is not eligible for this exclusion. See the discussion in the chapter on principal residence sale and rental.

Expenses that are deductible only because the home is used for business (such as the business portion of home insurance and utilities) are limited to the gross income derived from the use of the home. Unused deductions are carried over to the subsequent year but are subject to the limitations calculated in that year. Expenses that would have been otherwise deductible, such as real estate taxes and qualified home mortgage interest, are not subject to these limitations.

For taxable years beginning on or after January 1, 2013 taxpayers can use a simplified option when calculating the home office deduction. The requirements to qualify for the deduction remain the same but the recordkeeping and calculation is simplified. Under the simplified option, the standard deduction is \$5 per square foot used for business with a maximum of 300 square feet allowed; home-related itemized deductions are claimed in full on Schedule A; no home depreciation deduction or later depreciation recapture for the years the simplified option is used. The taxpayer may choose to use either the simplified method or the regular method for any taxable year on a timely filed original federal income tax return for the year. The method may not be changed for a particular year once selected but a different method may be used in a subsequent year.

START-UP EXPENSES

The amount of capitalized business start-up expenses eligible for deduction in the year the active business commences (instead of amortization over 180 months) is \$5,000, reduced (but not below zero) by the amount the start-up expenses exceed \$50,000. Expensing is automatic, and no longer requires an election to be formally made. However, taxpayers wishing to elect out must "affirmatively elect to capitalize" the costs on a timely filed federal

income tax return (including extensions). The election to either deduct or capitalize start-up costs is irrevocable and applies to all start-up costs of the taxpayer. Capitalized start-up costs must be amortized over 180 months.

ORGANIZATION COSTS

The amount allowed as a current expense for organization costs is \$5,000 (reduced by the amount of costs that exceed \$50,000). The excess amount must be amortized over 180 months. Expensing is automatic and no formal election need be made. Affirmatively electing to amortize the organization costs on a timely filed return (including extensions) will be considered as "opting out" of the expense election.

SELF-EMPLOYED HEALTH INSURANCE DEDUCTION

As a self-employed individual, you can deduct 100% of the health insurance premiums you pay for yourself, your spouse, your dependents, and any child of the self-employed under the age of 27 as of the end of the tax year. This deduction applies if you are a general partner in a partnership, a limited partner receiving guaranteed payments, or a more than 2% shareholder who receives wages from an S corporation. You can also include the premiums paid for eligible long-term care insurance policies as deductible self-employed health insurance subject to certain limitations. Medicare premiums are also includible.

Note: *These rules only apply for any calendar month in which you are not otherwise eligible to participate in any subsidized health plan maintained by any employer of yours or of your spouse, or any plan maintained by any employer of your dependent or your under-age-27 child.*

UTILIZE BUSINESS LOSSES OR TAKE TAX-FREE DISTRIBUTIONS

If you have an interest in a partnership, LLC or S corporation, you can deduct losses from the entity only to the extent you have tax basis and are "at-risk" for the losses. If you have a loss from any of these entities that will be limited, you may want to make a capital contribution (or a loan) before year-end to allow you to deduct the loss. However, losses may still be limited by the passive activity loss rules.

You can take tax-free distributions from a partnership, LLC or S corporation if you have tax basis in the entity and have already been taxed on the income. Since you are taxed on your share of the

income of these entities, regardless of whether or not distributions were made, you may have paid tax in a prior year, or will pay tax in the current year, on income that you have not received. Therefore, you can now take a distribution without paying additional tax, if funds are available and the entity permits such distributions, to the extent of your tax basis and at-risk amount in the entity. However, there are special considerations for distributions from S corporations.

SELF-EMPLOYMENT TAX

Your net earnings from self-employment are subject to Social Security and Medicare taxes. As a self-employed individual, your share of these taxes almost doubles since you pay both the employer's and employee's portions of these taxes. However, if you are also a salaried employee, your wages will offset the portion of your self-employment earnings subject to the Social Security tax.

The self-employment tax rate is 15.3%, which consists of 12.4% Social Security tax and 2.9% Medicare tax. The maximum amount of combined 2014 wages and self-employment earnings subject to the 12.4% Social Security tax is \$117,000 (\$118,500 in 2015). There is no limitation on self-employment income subject to the 2.9% Medicare tax. An additional 0.9% Hospital Insurance tax (which, combined with the 2.9% Medicare tax, will total 3.8%) will be imposed on self-employment income in excess of \$250,000 for joint returns; \$125,000 for married taxpayers filing separate returns; and \$200,000 in all other cases. See the chapter on tax rate overview.

Because of these taxes, your federal effective tax rate on self-employment income can be as high as 56%, compared to about 48% for income from wages (after including your employee share of Social Security and Medicare taxes). The reason the spread is not greater is primarily because you receive a deduction against AGI for 50% of the self-employment tax you pay. See the chapter on tax rate overview.

PENSION AND PROFITS SHARING PLANS

Rules governing contributions to, and distributions from, retirement plans are very complex, so an entire chapter is dedicated to this discussion. You should refer to that chapter for more specific information, including various plan restrictions.

NET OPERATING LOSS CARRYBACKS

Net operating losses generated can be carried back two years and carried forward 20 years.

Note: A taxpayer can elect to relinquish the carryback period if a timely election is filed. Taxpayers whose losses are *de minimis* or who expect to be in a higher tax bracket in future years may benefit from this election.

NEW REPORTING REQUIREMENTS

Corporations will be subject to certain reporting requirements related to employee stock purchase plans and incentive stock options. See the chapter on stock options, restricted stock, and deferred compensation plans.

DEFERRAL OF 2009/2010 CANCELLATION OF INDEBTEDNESS INCOME UNDER THE AMERICAN RECOVERY AND REINVESTMENT ACT OF 2009

Under the general rules for cancellation of indebtedness income ("COD"), if a loan is settled for less than the original amount owed, such as where a debt is forgiven, significantly modified, exchanged for new debt or repurchased by the debtor, taxable income is generated to the extent of the debt reduction. The debtor can exclude this income in certain situations, including to the extent of insolvency or to the extent of debt discharged under Title 11 (Bankruptcy). The debtor is required to reduce certain tax attributes to the extent of the debt excluded from income. The tax attributes reduced include net operating losses, general business credits, basis for depreciable and non-depreciable assets, and unused foreign tax credits.

A provision in the American Recovery and Reinvestment Act of 2009 provides a debtor the ability to elect to recognize certain COD income ratably over a five-year period. A debtor can elect to recognize and report COD income from a "reacquisition" of an "applicable debt instrument" that occurred after December 31, 2008 and before January 1, 2011. For reacquisitions which occurred in 2009 or 2010, the COD income is reported ratably over five tax years starting in 2014.

A "reacquisition" is defined as an acquisition of the debt instrument by the debtor (or related party) that issued the debt. An acquisition includes a cash purchase of the debt, exchange of new debt for old debt, an exchange of debt for corporate stock or a partnership interest, contribution of the debt to capital or forgiveness of the total debt.

An "applicable debt instrument" is defined as a debt instrument issued by a C corporation or any other person in connection with a trade or business. Note that personal debt or debt incurred to acquire personal investments does not qualify.

The election is made on a debt-by-debt basis and is irrevocable once made. This election should be considered where the debtor does not qualify for the COD income exclusions. Keep in mind that if the election was made to recognize the COD income over the five-year period, the normal COD income exclusions for insolvency or bankruptcy will not apply, nor will the tax attribute reduction rules.

Partnerships, S corporations and LLCs were required to make this election where the debt was at the pass-through entity level.

FINAL REPAIR/CAPITALIZATION REGULATIONS

The IRS released the much-anticipated final “repair” regulations in September 2013. These regulations explain when business owners must capitalize costs and when they can deduct expenses for acquiring, maintaining, repairing, and replacing tangible property. These regulations apply to tax years beginning on or after January 1, 2014. Taxpayers had the option to apply either the final or temporary regulations to tax years beginning in 2012 or before 2014. Taxpayers may consider whether to file amended tax returns for 2012 to take advantage of these elections.

The final regulations include a de minimis expensing rule that allows taxpayers to deduct certain amounts paid to acquire or produce tangible property. If there is an Applicable Financial Statement (“AFS”) and a written accounting policy for expensing amounts paid or incurred for such property, then up to \$5,000 per invoice can be deducted. Therefore, taxpayers should have this written policy in place by the end of 2013 in order to qualify for 2014.

Note: *The AFS should be an audited financial statement.*

There are certain relief provisions applicable for smaller businesses. A \$500 expense threshold per item or invoice is allowed if the taxpayer does not have an AFS and has a written expense policy in place at the beginning of the year.

AFFORDABLE CARE ACT

The Patient Protection and Affordable Care Act of 2010 (“ACA”), along with the Health Care and Education Reconciliation Act, represents the most significant regulatory overhaul of the U.S. health care system since the passage of Medicare and Medicaid in 1965.

ACA was enacted to increase the quality and affordability of health insurance through the use of mandates, subsidies, and insurance exchanges. The following are the major considerations of the ACA:

■ Large Employer Mandate

The ACA requires that an applicable large employer pay an excise tax if:

1. The employer fails to offer its full-time employees (and their dependents) the opportunity to enroll in minimum essential coverage under an eligible employer-sponsored plan and any full-time employee is certified to the employer as having a premium assistance tax credit or cost-sharing reduction; or
2. The employer offers its full-time employees (and their dependents) the opportunity to enroll in minimum essential coverage under an eligible employer-sponsored plan, but the plan is either underfunded or too expensive. Also, one or more full-time employee is certified as having a premium assistance tax credit or cost-sharing reduction.

For 2015, an applicable large employer is defined as one that employs within one calendar year an average of at least 100 (50 in 2016) full-time equivalent employees. Full-time is defined to be at least 30 hours of service per week. However, there are uncertainties with the application of these rules as they relate to seasonal workers. Further guidance from the IRS is anticipated.

Originally scheduled to go into effect in 2014, its implementation is delayed until January 1, 2015.

■ Employer and Insurer Reporting

The ACA generally requires applicable large employers to file an information return (known as a Code 6056 return) that reports the terms and conditions of the employer-provided health care coverage for its full-time employees. Other parties, such as health insurance plans, have similar reporting requirements.

Because the large employer mandate has been postponed until 2015, the reporting has also been delayed until the first quarter of 2016. For 2014, reporting is voluntary. Separate from this rule, the ACA requires employers with 250 or more employees to provide the cost of the applicable employer-sponsored coverage on the employee’s Form W-2, “Wage and Tax Statement.”

■ Small Employer Health Insurance Premium Credit

The ACA provides a tax credit to encourage eligible small employers to provide health insurance coverage to their employees. An eligible taxpayer can claim the Code Section

45B credit for two consecutive years beginning with the first tax year on or after 2014. A taxpayer may claim the credit for tax years beginning in 2010 through 2013 without those years counting towards the two-consecutive-year period.

An eligible small employer is one with no more than 25 full-time employees for the tax years whose employees have an average annual wages of less than \$50,800 per employee in tax years beginning in 2014 (this number is indexed for inflation). Also, the employer has a qualifying arrangement in which the employer pays a uniform percentage of not less than 50% of the premium cost of a qualified health plan offered by the employer to its employees through a SHOP marketplace.

The maximum credit through 2013 is 35% of the premiums paid for small business employers and 25% for small tax-exempt employers. The percentages for 2014 and thereafter are 50% for small business employers and 35% for small tax-exempts.

■ Individual Mandate

Beginning January 1, 2014, individuals must carry minimum essential coverage for each month or make a “shared responsibility payment” (penalty) with his or her tax return. Minimum essential coverage is that from an employer-sponsored plan, coverage obtained through a state or federal marketplace, Medicare, Medicaid or other similar plans. The penalty in 2014 is \$95 per person or 1% of taxable income, whichever is greater. For 2015, it is the greater of \$325 per person or 2% of taxable income and for 2016, it is the greater of \$695 or 2.5% of taxable income. Certain family limits apply.

The Premium Assistance Tax Credit was designed to help offset the cost of health insurance coverage obtained through a marketplace.

Planning Opportunity: *Employers facing increased costs in their health insurance coverage to meet the minimum essential coverage requirements, or incur a penalty, must decide if they should “pay or play.” Business owners may wish to consider reviewing their company’s entire employee compensation package, including the cost-effectiveness of their retirement plans, and perhaps revamping their entire compensation strategy to obtain and retain human capital.*

capital gains and dividend income

Managing capital gains and losses can help you save taxes, defer taxes and obtain the highest after-tax yield on your assets. This planning is very critical when considering the various tax rates since the rate on short-term capital gains can be as high as 43.4% (including the 3.8% Medicare Contribution Tax for certain taxpayers) compared to the long-term capital gain rate of 23.8% (including the 3.8% Medicare Contribution Tax for certain taxpayers).

CAPITAL GAIN TAX RATES

As a result of the ACA an additional 3.8% Medicare Contribution Tax may be imposed on your net investment income depending upon your tax bracket. For more information on how this tax is computed, see the chapter on tax rate overview. As Chart 4 illustrates, for 2014 and thereafter, many different tax rates can apply to capital gains, but the most important rates to remember are the maximum tax rates of 39.6% on net gains from assets

held 12 months or less (short-term) and 20% on most assets held more than 12 months (long-term). However, the actual rate of tax you pay on the sale of a capital asset can depend on more than just how long you have held the asset, including:

- Type of property sold.
- The AMT rate of 28% on assets held short-term.

chart

4

CAPITAL GAIN TAX RATES

	39.6%	28%	25%	20%*	15%	0%
Short-Term Rate (Holding period 12 months or less)						
Regular tax purposes	■					
AMT purposes		■				
Long-Term Rate (Holding period greater than 12 months)						
Regular tax purposes				■	■	
AMT purposes				■	■	
Exceptions to the 20% tax rate on property held more than 12 months						
Collectibles, such as artwork & precious metals		■				
Gain attributable to depreciation on real property			■			
Gains otherwise taxable at the 10% or 15% ordinary tax rate						■
Gain attributable to depreciation on tangible personal property	■					
Taxpayers are liable for the additional 3.8% Medicare Contribution Tax on net investment income if their Modified Adjusted Gross Income ("MAGI")** exceeds the threshold amount for the applicable filing status:						
Filing Status	Threshold Amount					
Married Filing Joint & Qualifying Widow(er)	\$ 250,000					
Single & Head of Household	\$ 200,000					
Married Filing Separate	\$ 125,000					

*The 20% tax rate applies to taxpayers with income above certain threshold amounts (\$450,000 for married filing jointly; \$425,000 for head of household; \$400,000 for single filers; and \$225,000 for married filing separately).

** MAGI is AGI increased by the net income excluded from foreign income under Internal Revenue Code Section 911(a).

tax tip

7

USE THE NETTING RULE TO GET THE BEST RESULTS

Assume you determine that your year-to-date net capital gains are \$240,000, made up of short-term losses of \$160,000 and long-term gains of \$400,000. In 2014, your capital gains tax would be \$48,000 (\$240,000 of excess long-term gains at 20%). You also have assets with an unrealized short-term gain of \$150,000 that you would like to sell, but are reluctant to pay the short-term capital gain rate of 39.6%. Since gains are netted, if you realized the gain you would have net capital gains of \$390,000 (short-term losses of \$10,000 and long-term gains of \$400,000). Your capital gains tax would be \$78,000 (\$390,000 of excess long-term gains at 20%). So your tax increase would be \$30,000 (\$78,000 less the original tax of \$48,000). You actually paid the long-term rate of 20% on the additional short-term gain of \$150,000.

Note: The above example is exclusive of the Medicare Contribution Tax, and also assumes that the top rates apply.

- A netting rule that can flip the actual rate from 20% to 39.6% on long-term gains (and the reverse for short-term gains) since you must net excess losses from one holding period against the gains of the other holding period (see Tax Tip 7).
- 28% rate on the sale of collectibles, such as artwork and precious metals (including ETFs that invest in precious metals).
- Sale of real estate that is subject to depreciation recapture at a maximum rate of 25%.
- Exclusion and rollover provisions on the sale of certain assets.
- Capital loss limitations that only allow you to deduct \$3,000 of losses in excess of gains against ordinary income, such as wages and interest income. (If married filing separately, the limit for each individual is \$1,500.) It should be noted that net capital losses cannot reduce other categories of income in calculating the Medicare Contributions Tax.

YEAR-END TRADING STRATEGIES

If you have unrealized capital gains or losses, you should refer to Tax Tip 3 in the chapter on tax planning strategies to help you decide whether to take additional gains or losses before the end of the year. But as this tip illustrates, the exact nature of your gains and losses will dictate which stock positions you should consider selling.

COMPUTING YEAR-TO-DATE REALIZED GAINS AND LOSSES

Before determining which year-end strategy to use, it is important to compute your year-to-date realized gains and losses. Make sure

you consider the following when determining your year-to-date realized gains and losses:

Trade date

The trade date, not the settlement date, determines the holding period and the year you recognize gain or loss on the sale of publicly traded securities, except for short sales closed at a loss.

Excess capital losses

Only \$3,000 of capital losses in excess of capital gains can reduce your ordinary income, per year (\$1,500 if you are married filing separately). Excess losses are carried forward indefinitely (but not back) until used. Capital loss carry forwards are terminated when the taxpayer dies; however, you can carry back some losses on Section 1256 contracts against prior years' income from similar contracts.

Mutual fund distributions

Dividends paid by mutual funds typically include long-term capital gain distributions that are taxed as capital gains rather than dividend income. Many funds make their largest distributions in December, so make sure you consider them when computing your year-to-date net capital gain or loss. Short-term capital gain distributions and non-qualifying dividends, such as from money market constant dollar funds, are treated as dividend income subject to the ordinary income tax rates. However, mutual funds paying out qualifying dividends in 2013 and beyond are subject to rates of 15% or 20%. The 3.8% Medicare Contribution Tax rate also applies.

Note: Absent unusual circumstances, and strictly from an income tax perspective, it is usually inadvisable to buy mutual funds shortly before an announced dividend distribution (see below).

Pass-through entities

Gains and losses from pass-through entities, such as partnerships, S corporations, and LLCs, are taxable to you whether or not you

actually receive a cash distribution. You will need to determine your projected share of any distributable capital gains and losses from any entities in which you are an owner or investor.

Mark-to-market assets

Capital gains and losses on mark-to-market assets such as S&P Index options and regulated futures contracts should also be considered when determining your year-to-date capital gains and losses. For the tax treatment of these "Section 1256 contracts," see the discussion later in this chapter.

TAX BASIS REPORTING REQUIREMENTS FOR INVESTORS

The Energy Improvement and Extension Act of 2008 provides that in the case of a covered security, every broker who is required to report the gross proceeds from the sale of the security must also report the adjusted basis in the security and whether any gain or loss with respect to the security is long-term or short-term. The reporting is generally done on Form 1099-B, "Proceeds from Broker and Barter Exchange Transactions." A covered security includes all stock acquired beginning in 2011 except stock in a regulated investment company for which the average basis method is available and stock acquired in connection with a dividend reinvestment plan, both of which are covered securities if acquired beginning in 2012. Options granted or acquired on or after January 1, 2014 are required to be reported.

The basis reported on 1099-B may not reflect application of the wash sale rules. Brokers are only required to report wash sales when the purchase and sale transactions occur in the same account. Therefore, you are required to adjust your basis for losses disallowed under those rules.

AVERAGE BASIS OF MUTUAL FUND SHARES

If you acquire shares in a mutual fund at various times and prices, you can calculate the gain or loss using an average cost basis. The shares need to be on deposit in an account handled by a custodian or agent who acquires or redeems those shares.

IDENTIFY LOTS TO REDUCE YOUR TAXES

If you only want to sell part of your holdings of a specific stock, you typically want to sell the lot with the highest cost first so that you can report the lowest gain. However, brokers frequently automatically sell the lots that you bought first, regardless of their relative cost. Avoid this mistake by instructing your broker in advance, in writing, that you want to sell the lots you have held long-term with the highest cost, assuming you are selling the position at a gain. If you are selling at a loss, generally sell the lowest cost lots first.

Note: *This assumes that the objective was to lower realized capital gains in the current year. It may have been more prudent to accelerate gains in the current year and postpone losses until the following year, if it is anticipated that your tax rate will increase in the subsequent year.*

WATCH OUT FOR THE AMT

Substantial net long-term capital gains will increase your deductible state and local income taxes, with the potential adverse effect of triggering the AMT either this year or next year. This will result in your losing the benefit of some or all of the deduction for the additional state income taxes. See Tax Tip 6 in the chapter on the AMT for an example of this. Also, substantial net long-term capital gains will increase your AGI, which will decrease applicable AMT exemptions and can result in triggering the AMT.

tax tip

8

MUTUAL FUND DISTRIBUTIONS ARE TAXABLE, EVEN IF THEY ARE AUTOMATICALLY REINVESTED

Typically, distributions from mutual funds are reinvested in the fund. The distribution itself does not change your aggregate value in the fund since it simply increases the number of shares you own at a lower per-share value.

However, a distribution is taxable in the year made, even if reinvested in the fund. For example, let's say you purchased 4,000 shares of an equity mutual fund on September 1, 2014 at \$50 per share. Just before year-end, the fund makes a capital gain distribution of \$5 per

share when the fund is selling for \$35 per share. You end up with capital gain income of \$20,000 (4,000 shares at \$5 per share), reportable on your 2014 return, even though the share value has decreased since your purchase. But your basis in the shares increases by the \$20,000 that you reported as income.

Warning: *Exchanging mutual funds is generally considered a sale of the initial fund with potential capital gain or loss results, even if the new fund is in the same family of funds.*

AVOID CAPITAL GAINS TAX THROUGH CHARITABLE GIVING

You can avoid paying capital gains tax on appreciated securities that you have held for more than one year if you use them to make your charitable contributions. (For donations to private foundations, the stock must be publicly traded.) You receive a contribution deduction based on the fair market value of the security (subject to certain limitations based on your AGI), yet you never pay tax on the appreciation.

This can reap even greater rewards if you front load a private foundation or a donor-advised fund with appreciated long-term securities to fund future contributions. See the chapter on charitable contributions for a detailed discussion.

BEWARE OF THE MUTUAL FUND TRAP

A capital gain distribution from a mutual fund may include significant gains realized by the fund before you bought the shares.

As Tax Tip 8 shows, you end up paying tax on the gains, regardless of whether or not your position in the fund has appreciated. In effect, you have converted part of your initial investment into taxable income.

A benefit of owning stocks directly rather than through a mutual fund is that you can control when you realize gains and losses, giving you the advantage of deferring the tax on the gain, or taking losses to minimize your tax. However, by direct ownership of stocks you may sacrifice some of the investment diversity that may be available in a mutual fund.

An alternative to an actively managed mutual fund would be a passively managed exchange traded fund or indexed fund.

TAKE LOSSES FROM WORTHLESS SECURITIES AND BAD DEBTS

When a security or non-business loan becomes completely worthless, you can at least recover some of your losses through tax savings. A worthless security is treated as a capital loss in the year it becomes totally worthless. For determining whether the loss is long-term or short-term, the security is deemed to be sold on December 31. To be considered worthless, a security must have absolutely no value. If it has even negligible value, you will usually be prevented from claiming it as a worthless security. You can avoid the absolute-no-value test by selling the security (in a bona fide sale) to an unrelated party for a nominal amount. If you complete

the sale before the end of the year, you will be able to take the loss in the current year.

Note: Do not confuse bankruptcy with worthlessness. Shares of stock of many companies in bankruptcy have some value.

A non-business bad debt, typically an uncollectible loan, is similarly deductible as a capital loss at the end of the year in which it becomes entirely worthless. However, the loss is treated as a short-term loss regardless of how long the debt was outstanding. But make sure that it is not really a loan that you have simply forgiven. A forgiven loan will be treated as though you made a gift. If the total amount of gifts to any one person exceeds \$14,000 for 2014 or 2015, it will either reduce your lifetime gift tax exclusion or result in a gift tax if you have already exhausted the exclusion. See the chapter on gift and estate planning.

TREATMENT OF LOSSES FROM FRAUDULENT INVESTMENT ARRANGEMENTS

Unfortunately, taxpayers sometimes experience a loss from a fraudulent investment arrangement. For example, an investment advisor may have reported investment activities and resulting income amounts that were partially or wholly fictitious. In some cases, in response to requests for withdrawals, the investment advisor made payments of purported income or principal to the taxpayer, but these payments were made from amounts that other investors had invested in the fraudulent arrangement (e.g., a Ponzi scheme).

The Internal Revenue Code allows a deduction for losses sustained during the taxable year, not compensated by insurance or otherwise subject to various limitations. A loss from a fraudulent investment arrangement is deductible in the taxable year in which the taxpayer discovers the loss, provided that the loss is not covered by a claim for reimbursement or other recovery as to which the investor has a reasonable prospect of recovery. To the extent that the investor's deduction is reduced by such a claim, recoveries on the claim in a later taxable year are not includible in the investor's gross income.

The loss resulting from a fraudulent investment arrangement is generally the initial amount invested in the arrangement plus any additional investments, less amounts withdrawn, if any, reduced by reimbursements or other recoveries and reduced by claims as to which there is a reasonable prospect of recovery.

If an amount is reported to the investor as income in years prior to the year of discovery of the theft, and the investor included the amount in his or her gross income, and the investor does

not subsequently withdraw the amount previously reported as income, the fictitious income may be included in the amount of the deductible theft loss.

A theft loss in these types of transactions entered into for profit may create or increase a net operating loss that can be carried back and/or forward under special rules.

WASH SALE CAN DISALLOW YOUR LOSS

The wash sale rule prohibits you from realizing a loss on a security if you buy the same or a substantially identical security (or option to buy such a security) within 30 days before or after you sell it. This requires you to be out of the position and/or at an investment risk for those 61 days if you want to realize a loss on the security yet buy it back for future growth. If you fail the wash sale “test,” your loss will be realized only when the replacement security is sold.

If you don’t want to risk being out of the position for more than 61 days, consider the following alternatives:

- Buy securities of another company in the same industry, or
- Buy shares in a mutual fund (or an exchange-traded fund) that specializes in the same industry, or
- Double up on the position 31 days before selling at a loss.

You can sell the alternative security or mutual fund after 30 days and use the proceeds to buy back securities in your original company, if you prefer.

One planning technique available is to sell appreciated securities in the current year in order to utilize capital losses and then buy back the stock immediately, thereby securing a step-up in basis. The wash sale rule does not apply to gains.

USE A BOND SWAP TO REALIZE LOSSES

You may be holding losses in your bond portfolio where you can realize a loss and immediately purchase somewhat similar bonds, yet avoid the wash sale rule. This strategy is referred to as a bond swap because your net position after the sale and subsequent purchase is similar to your position prior to the swap. For example, the replacement bond is not considered a substantially identical security (the wash sale test) if it has a different issuer or has a materially different stated interest rate or maturity.

SELLING SHORT AGAINST THE BOX

The reverse of the wash sale rule — the “constructive sale” rule — prevents you from locking in the appreciation on a security without recognizing any taxable gain by selling an identical security short. The two positions are deemed to be a constructive sale and you must realize gain as if the appreciated security was sold for its fair market value on the date of the short sale, thereby preventing you from deferring the gain to a future year.

An exception to this rule allows you to close the short sale within 30 days after the end of the tax year if you keep your appreciated position open and at risk for at least 60 days following the close of the short sale. Since closing the short sale is based on the delivery date, you actually need to close the short sale earlier so that you have enough time to have the shares delivered within the 30 days.

LONG-TERM CAPITAL GAINS AND DIVIDEND INCOME TAXED AT 0%

Net long-term capital gains and qualifying dividend income that would normally be taxed are not taxed at all for taxpayers whose taxable income is below certain thresholds. This rule applies to taxpayers with taxable income that would otherwise be taxed at either 10% or 15% before application of this rule.

TRANSFER APPRECIATED STOCK TO SAVE TAXES

You can transfer appreciated securities that you have held long-term to your child, or other beneficiary, who is subject to a low income tax rate and then have the child sell the securities and pay no federal tax. The child must be over age 19 (or if a full-time student, over age 24) to avoid the kiddie tax rule that assesses tax based on your tax rate, as discussed in the tax rate overview chapter. However, keep in mind that gift tax issues must be considered, as discussed in the chapter on gift and estate planning.

As an example, assume you transfer securities with unrealized gains of \$30,000 to your single child over age 19 (who is not a full-time student), and the child only has wages from a summer job of \$4,000. He or she would pay no tax on the \$30,000 gain. This is because of a provision that treats capital gain income that would otherwise be taxed at either the 10% or 15% graduated tax rates as being taxed at a rate of zero. A single taxpayer can have taxable income of up to \$36,900 in 2014 (\$37,450 in 2015) and still be in the 15% tax bracket, thereby qualifying the taxpayer to a 0% tax rate on his or her capital gains.

DEFER CAPITAL GAINS TAX ON HIGHLY APPRECIATED SECURITIES

If you have appreciated securities that you are reluctant to sell because of the capital gains tax, consider creating a charitable remainder trust. By doing so, you will defer the tax and the trust will make annual payments to you. The remainder amount at the end of the trust's term will go to a charity you designate. See the chapter on charitable contributions for a more detailed discussion of the different types of charitable trusts.

SECTION 1256 CONTRACTS

Section 1256 contracts include regulated futures contracts, foreign currency contracts, non-equity options (including stock index options), dealer equity options and dealer securities futures contracts. The tax issues related to these contracts are different than typical capital gain assets. The gain or loss on these contracts is automatically treated as 60% long-term and 40% short-term, regardless of the holding period. Thus, the maximum effective federal tax rate on Section 1256 gains for 2014 and 2015 is 27.84% (31.64% when considering the additional 3.8% Medicare Contribution Tax) for certain taxpayers. Any unrealized gain or loss on the contracts at year-end is taxable in the current year as if sold, with an adjustment to your tax basis for the gain or loss already treated as realized at the end of the previous year.

INSTALLMENT SALE REPORTING BENEFITS

An installment sale can be a very tax-efficient method to realize a gain on the sale of an asset. While typically considered for real estate sales, it can also apply to sales of non-publicly traded property, such as stock in a privately held corporation or an interest in a limited liability company or partnership. If you are considering selling any of these assets, see the discussion in the chapter on passive and real estate activities.

LIKE-KIND EXCHANGES

The like-kind exchange rule allows you to defer taxes by exchanging property for other property that has the same nature or character. You don't pay taxes on any gain until you sell the property that you have received in the exchange, except to the extent of any cash or other boot ("unlike" property) received. Typically, this rule applies to the sale of rental real estate, although certain other types of property are also eligible. See the chapter on passive and real estate activities for a more detailed discussion of like-kind exchanges.

Note: Like-kind exchange reporting is mandatory if the replacement property is the same as the surrendered property and other tests are met. Unlike installment sales, you cannot "opt out" of like-kind exchange reporting.

QUALIFIED DIVIDEND INCOME

Qualified dividends received by an individual shareholder through December 31, 2014 and 2015 are taxed at 15% and 20% for taxpayers who fall into the 39.6% tax bracket. These rates are exclusive of the Medicare Contribution Tax of 3.8%. The following requirements and restrictions must be satisfied:

- The dividends must be paid by either a domestic corporation or a qualified foreign corporation (as defined below).
- You must hold the stock for more than 60 days during the 121 days beginning 60 days before the ex-dividend date. This increases to 90 days out of 181 days for certain preferred stock. The reduced rate is not available for dividends received if you are holding an equivalent offsetting short position in the same security.

Dividends taxed at 15% or 20% are not investment income for purposes of the investment interest expense limitation. However, just as is the case for net long-term capital gains, you can elect to tax the dividends at ordinary rates and eliminate some or all of this limitation on the deduction of investment interest. See the discussion in the chapter on interest expense.

Dividend income that is generally not eligible for the 15% or 20% rates, and therefore taxed at your ordinary income tax rate (as high as 39.6% or 43.4%, inclusive of the additional Medicare Contribution Tax), includes dividends received from:

- Money market mutual funds and bond funds.
- Real estate investment trusts (REITs).
- Payments you received in lieu of dividends if your broker loans your shares to a customer (as part of a short sale) and dividends are paid to the short sale buyer before the short sale is closed.

A qualified foreign corporation is generally a foreign corporation that is eligible for the benefits of a comprehensive income tax treaty with the U.S. that includes an exchange of information program. In addition, a foreign corporation is treated as a qualified foreign corporation if its stock is readily traded on an established securities market in the U.S. For this purpose, a share will be treated as so traded if an American Depositary Receipt ("ADR") backed by the

share is so traded. Dividends received from a foreign corporation that was either a foreign investment company or a passive foreign investment company ("PFIC") either for the year of distribution or the preceding year are not qualified dividends eligible for the 15% or 20% rates.

SECTION 1035 EXCHANGE

The law provides that no gain or loss shall be recognized on the exchange of an annuity contract for another annuity contract. The exchange treatment is for individuals who have merely exchanged one insurance policy for another which better suits their needs. The exchange without gain or loss recognition of an annuity contract for another annuity contract is limited to cases where the same person or persons are the obligee or obligees under both the original and exchanged contracts.

Under Revenue Procedure 2011-38, the direct transfer of a portion of the cash surrender value of an existing annuity in exchange for a second annuity contract will be treated as a tax-free exchange under Section 1035 if no amount (other than an amount received as an annuity for a period of 10 years or more or during one or more lives) is received during the 180 days beginning on the date of the transfer. A subsequent direct transfer of all or a portion of either contract involved in an exchange is not taken into account if the subsequent transfer qualifies (or is intended to qualify) as a tax-free exchange.

stock options, restricted stock, and deferred compensation

Stock options, restricted stock, and other types of deferred compensation continue to be included by many employers as part of the overall benefits offered to executives of both private and public companies. The taxation of these components of compensation are quite complex and, if these benefits are mismanaged by an employee, the tax cost could be substantial.

STOCK OPTION PLANS

In recent years, the number of companies offering stock options to their employees has decreased. However given the recent stock market performance, there are many employees faced with important decisions of what to do with the stock options that they presently hold. These options may represent a significant portion of an employee's overall compensation. If you hold stock options, it is vital to understand the tax rules related to your options in order to maximize the after-tax cash flow related to these instruments. You need to frequently review your inventory of options which have been granted but not yet exercised, along with stock still held from previously exercised options, to come up with a strategy for exercising your options and selling your stock, while minimizing your tax exposure.

There are two kinds of employee stock options: incentive stock options ("ISOs") and nonqualified stock options ("NQSOs"). The tax rules governing the taxation of the exercise of options and the subsequent sale of shares differ substantially between ISOs and NQSOs. For all employee stock options there are three critical dates to remember for tax purposes: (1) the date the options are granted to you, (2) the date they are exercised, and (3) the date the stock acquired via the options are sold. You must carefully plan when to exercise stock options and how long to hold the shares (after they are exercised) before selling them.

INCENTIVE STOCK OPTIONS

ISOs give you the right to buy company stock in the future at a fixed price that is determined at the time the options are granted. The options usually must be exercised within ten years of receiving them. They cannot be transferred (except on death) and can be exercised only during employment or within three months of leaving the company. The exercise price cannot be less than the stock's fair market value at the time of the grant, and thus the stock must appreciate before the ISOs have any value. If they do — and once you've satisfied the applicable holding periods — you can buy shares at a price that is below their fair market value.

The key tax consequences related to the granting and exercising of ISOs include the following:

- There is no tax liability on the date the options are granted.
- There is no regular tax liability when you exercise a previously granted ISO. However, the spread between the exercise price (what is paid for the shares) and the fair market value of the shares at the time of exercise is treated as an addition when computing your AMTI.

- If the stock acquired by exercising the ISOs is owned at least two years from the time the options were granted or one year after they were exercised, whichever is later, a profitable sale of the stock will produce long-term capital gain income taxed at a maximum rate of 20%, plus a 3.8% Medicare Contribution Tax on net investment income for taxpayers above the threshold amounts. The gain will generally be the difference between the fair market value of the stock on the date of the sale and your exercise price. This is known as a qualifying disposition. For AMT purposes, the basis in the stock will be the fair market value on the date of exercise (to account for the adjustment mentioned above). Thus, the capital gain will be lower for AMT purposes than for regular tax purposes, although the maximum of a 20% federal tax rate applies to each.

- A disqualifying disposition occurs if you sell the stock within the later of one year after the option is exercised, or within 24 months of the grant date. The gain on this sale will be included as compensation and will be taxed at a federal rate as high as 39.6%. If the price of the stock sold changed from the date of exercise, you may also have a short-term gain component as well. However, there are no Social Security or Medicare taxes due on the compensation derived from disqualifying dispositions of ISOs.

In order to make the best decision of when to exercise your options and sell the underlying shares from both cash flow and tax perspectives, you need to:

- Project both your regular tax and AMT for the current year to determine the number of shares you can exercise without incurring a current-year AMT liability.
- Project multiple future tax scenarios based on different stock prices to assist you in deciding if you should exercise options now, even at the expense of incurring an AMT liability, to gain from potentially greater future tax savings. Also, you should consider the availability of the AMT credit discussed below.
- Determine how much cash you have available to exercise the options and, if necessary, consider a financing option for purchasing the stock. Among these alternatives are a cashless exercise and a stock swap. These techniques will be discussed later in this chapter.

AMT CREDIT

Even if the exercise of your ISOs results in an AMT liability, you will be eligible in future years to receive an AMT credit for AMT paid on these option exercises in future years. Generally, the credit you can use is limited to the annual amount that your regular tax

exceeds your AMT without regard to the credit in each year. Any unused credit can be carried forward until the full amount is used. While it is usually recommended to avoid paying AMT on ISO exercises whenever possible, there may be situations when you may decide to go ahead with the exercise because of favorable market conditions.

Please see the chapter on tax credits for a detailed discussion of the AMT credit.

ISO SCENARIOS

The first decision you have to make is when to exercise your existing options, from right now up to just before they are due to expire. Once you have exercised the options, you then must decide when to sell the shares. However, the tax consequence of selling the shares compared to continuing to hold the shares can be complicated since it depends on several factors. Some are clearly defined, such as the current trading price, the original exercise price, the trading price at the time of the exercise of the

option, and the length of time you have held the shares since you exercised the option. But trying to plan for different scenarios when it is impossible to predict the future price of the stock makes it difficult to know the best choice. Here are some alternatives based on your current holdings combined with certain assumptions.

SHOULD YOU EXERCISE EARLY?

Exercising your options early rather than waiting until the expiration date can be advantageous, but you must consider cash flow and potential tax costs. On the plus side, exercising early:

- Starts your holding period so you can be eligible for the federal long-term capital gain rate that much sooner.
- Can eliminate your AMT liability by giving you the ability to exercise just enough options to reach a break-even point between the AMT and regular tax (thereby avoiding the AMT). This can be done annually to allow you to exercise your options with minimal, or no, AMT cost.

tax tip

9

ISO TAX BENEFITS

Assume the following facts:

1. You are granted incentive stock options to buy 9,000 shares of your company stock for \$20 per share on June 3, 2008.
2. On January 10, 2015, you exercise all 9,000 options when the fair market value is \$30.
3. You hold the shares until January 12, 2016 and then sell them for \$45 per share, and you were in the AMT in all years up to the year of the sale.

Your tax consequences without considering the Medicare Contribution Tax of 3.8% would be as follows:

- There is no tax due when the options are granted.
- There is no regular tax due when you exercise the grant and purchase the shares. However, you will have an AMT preference of \$90,000 (9,000 shares at the excess of \$30 over your cost of \$20). Assuming you are already in the AMT, your additional AMT tax is \$25,200 (\$90,000 times the AMT rate of 28%).

When you sell the shares:

- You have a federal regular tax liability of \$45,000 computed by applying the 20% long-term capital gain rate to the gain of \$225,000, computed by subtracting the cost of \$180,000 (9,000 shares at \$20 per share) from your proceeds of \$405,000 (9,000 shares at \$45 per share).
- You will be eligible to offset your regular tax from the sale by \$25,200 of AMT that you paid when you exercised the option. This is your AMT credit amount, but you can only utilize it to the extent your regular tax exceeds your AMT before the offsetting credit.
- Even if you cannot utilize the AMT credit because you are still in the AMT, your AMT tax on the gain is \$27,000. This is 20% of the AMT gain of \$135,000 based on proceeds of \$405,000 less your AMT tax cost of \$270,000 (9,000 shares at \$30 per share when you exercised the options and reported a tax preference amount). You pay the lower AMT tax of \$27,000 in the year of the sale rather than the regular tax of \$45,000, thus saving \$18,000 currently and possibly saving an additional \$25,200 in the future.
- If you are not able to use all the AMT credit, you can continue to carry the unused credit forward to offset regular tax in a subsequent year.

- May reduce your overall AMT liability if you are able to exercise the ISOs at a time when you think the market price is close to bottoming out. Since the price is lower and the spread between the fair market value and your exercise price may be negligible, you can exercise more options without incurring an AMT liability, or just having to pay a small liability. Even if the exercise triggers the AMT you'll pay less than you would if you had exercised an equal number of options at a time when the stock price was higher.

Alternatively, on the negative side, exercising early:

- Accelerates the use of funds you need to purchase the shares,
- Can create an AMT liability before you have the proceeds from the sale of the stock to pay an AMT liability, and
- Exposes you to a loss if the value of the shares drops below your exercise cost.

ISO EXERCISED IN PRIOR YEARS

Assume the following: You have held 10,000 shares for more than 12 months from the exercise of an ISO grant in a prior year. Your exercise cost was \$15 per share, and the stock was trading at \$25 per share when you exercised the grant. You were subject to the AMT in the year of the exercise on the full amount of the spread between the fair market value of \$25 and the exercise cost of \$15.

If the current trading price is lower than your exercise price

If you have net capital gains for the year, you can sell the shares and realize a capital loss. As an example, assume the stock is currently trading at \$12 per share. While you would only have a \$3 per share regular tax loss (\$12 less your exercise cost of \$15), your AMT loss would be \$13 per share (\$12 less the \$25 value when you exercised the options). If you are in the AMT this year, your AMT loss on the sale would be \$130,000 (\$13 per share times 10,000 shares), creating a potential total savings of \$27,140 in taxes (\$130,000 times the 20% long-term capital gain rate plus \$30,000 times 3.8% Medicare Contribution Tax on net investment income).

If the current trading price is higher than your exercise price but lower than the trading price at the time you exercised the grant

Assume the stock is currently trading at \$19 per share. If you are not in the AMT for the year, you will realize a gain of \$4 per share (\$19 less exercise cost of \$15), resulting in a tax of \$9,520 (23.8% of 10,000 shares at \$4 gain per share). But you may actually save taxes since you have an AMT credit available to offset your regular tax, if not already utilized. The AMT credit is \$28,000 (28% of 10,000 shares at an AMT spread of \$10 per share). Your tax

savings will be \$18,480 (\$28,000 AMT credit less the \$9,520 regular and Medicare Contribution Tax on the sale, assuming you have sufficient regular tax liability).

The current trading price is higher than both your exercise price and the trading price at the time of the exercise

If you sell the shares, you will have a capital gain for both regular tax and AMT purposes. Assume the current stock price is \$35. If you are not in the AMT, you would pay tax on the gain of \$20 per share (\$35 less your exercise cost of \$15). As discussed above, you may have an AMT credit available to offset the tax on the gain. If you are subject to the AMT this year, your AMT gain would be \$10 per share (\$35 less the price at the time of exercise of \$25). Your tax increase for federal tax purposes would be based on the AMT gain of \$10 rather than the regular tax gain of \$20. However, the additional 3.8% Medicare Contribution Tax on net investment income would be based on the \$20 gain.

tax tip

10

**ELIMINATE THE AMT
IF THE STOCK PRICE
DROPS AFTER AN
EXERCISE**

A falling stock price can result in costly tax consequences if the sale of stock purchased through exercising an incentive stock option is not planned for properly. Take the facts in Tax Tip 9 but assume your exercise of 9,000 shares was earlier this year and the price per share has fallen back to \$20, your exercise price. As Tax Tip 9 demonstrates, your AMT tax on the exercise would be \$25,200 (\$90,000 preference at 28%) if the AMT applies. You will have to pay this tax even though the selling price of your shares is currently equal to the price you paid for them.

What can you do? Sell the shares before the end of the year so that you will have a disqualifying disposition. You would not have a regular tax liability since the selling price of \$20 is now equal to your exercise price. But you will eliminate the \$25,200 AMT that you would pay if you did nothing.

It may make sense to consider selling the shares even if the selling price is greater than your exercise price. Let's say the stock price has dropped to \$23 per share after exercise and you will be in the AMT this year. If you sell the stock before the end of the year, you will realize ordinary income of \$27,000 (9,000 shares at a gain of \$3 per share based on the selling price of \$23 and your cost of \$20 per share). However, the AMT liability on the disqualifying disposition will be \$7,560 (\$27,000 x AMT rate of 28%), which is less than the \$25,200 AMT that you would pay if you held the shares (as computed above). Because the wash sale rule (as discussed in the chapter on capital gains) does not apply to securities sold at a gain (regardless of any AMT benefit you receive), you can then repurchase the shares in the open market, even at a lower price, so that you would still own the same number of shares.

tax tip

11

USE THE AMT TO YOUR ADVANTAGE TO REDUCE TAXES ON THE SALE OF ISOs

Assume you exercised an ISO grant in 2007 and purchased 30,000 shares at the exercise price of \$5 per share when the stock was selling for \$15 per share. Despite the tax preference amount of \$300,000 (30,000 shares times the \$10 per share spread) you did not have an AMT liability that year because you had substantial ordinary income. You sell the shares in 2015 for \$40 per share and you are in the AMT.

	Regular tax	AMT
Long-term capital gain	\$ 1,050,000	\$ 750,000
Tax at 20%	210,000	150,000
Effective tax rate on sale	20%	14.29%

Please note this table does not include impact of the Medicare Contribution Tax on net investment income.

The long-term capital gain for regular tax purposes is \$1,050,000 (proceeds of \$1,200,000 less the \$150,000 you paid to purchase the shares). For AMT purposes, the gain is only \$750,000 since your basis is \$15 per share (fair market value at the time of the exercise, even though you did not pay the AMT in that year). The result of the sale is that you only pay a current federal effective tax rate of 14.29% (\$150,000 tax on the actual gain of \$1,050,000).

ISOs EXERCISED EARLIER IN THE CURRENT YEAR

If you exercised ISOs earlier in the year, you may want to consider selling the shares in a disqualifying disposition if certain conditions exist. Again, let's assume an original exercise price of \$15 per share and a trading price of \$25 per share at the time of exercise.

If the current trading price is less than the price you paid to exercise the option

First, determine if the AMT preference amount of \$10 per share (\$25 trading price at the time of exercise less your cost of \$15 per share) will put you into the AMT or increase an already existing AMT liability. If so, consider selling the stock to eliminate the AMT that you will have to pay even though the stock price has dropped. As Tax Tip 10 illustrates, you could end up with a substantial tax without any funds to pay the tax. Also, you can always buy back the stock as long as you wait 30 days to avoid the wash sale rule discussed in the chapter on capital gains and dividends. If the AMT preference amount does not put you into the AMT, you can choose to continue holding the shares if you believe the stock will appreciate.

If the current trading price is higher than your exercise price but lower than the trading price when you exercised the option

If you sell the shares, you will have a disqualifying disposition and

the excess of the current trading price over your exercise price will be taxable as compensation at ordinary income tax rates as high as 39.6%. But if you expect to be in the AMT this year, the sale of the shares will eliminate the AMT of \$10 per share on phantom appreciation that no longer exists. As an example, let's assume the stock price has dropped to \$18 per share. If you sell the shares, you will have ordinary income of \$3 per share for both regular tax and AMT compared to \$10 of income for AMT purposes had you taken no action.

If the current trading price is higher than both your exercise price and the trading price at the time of the exercise

Once again, if you sell the shares you will have a disqualifying disposition and the excess of the fair market value on the exercise date over your exercise price will be taxable as compensation at ordinary income tax rates. The additional increase on the sale at the date of exercise will be taxed as a short-term capital gain. So if the stock is selling for \$30 per share, a sale of the shares would result in \$15 of income per share sold taxed at potentially 39.6% for regular tax purposes. In addition \$5 per share may be subject to the Medicare Contribution Tax of 3.8%. Thus, if you are not subject to the AMT during the year, it would not make sense to sell the stock during the year. If you would have been in the AMT with or without the ISO preference item it may make sense to sell the shares by year-end. This is because you may never get a benefit for the AMT paid.

NONQUALIFIED STOCK OPTIONS

Unlike ISOs, the exercise of NQSOs creates taxable ordinary income in the year of exercise for both regular tax and AMT purposes. The income is equal to the excess of the stock's fair market value on the date of exercise over the exercise price plus any amount that was paid for the option, where applicable. The granting of an NQSO does not result in taxable income unless the value of the option is readily ascertainable, which generally is not the case. The income recognized upon exercise will be taxed as compensation and will be subject to both Social Security and Medicare taxes.

When you sell the stock after exercising, any appreciation/depreciation in the stock's value will be taxed as capital gains/losses. The holding period for the underlying stock starts when you acquire the shares — it does not include the time you held the options. For long-term capital gain treatment, you must hold the shares for more than one year after the exercise date.

Unlike ISOs, NQSOs are sometimes transferable. However the employee (and not the transferee) will generally recognize income for tax purposes upon the exercise of the options.

You are not allowed to receive in-the-money options without triggering substantial penalties under provisions of the Internal Revenue Code restricting this type of deferred compensation (see below).

Tax Tip 12 illustrates the tax consequences of an exercise and sale of shares received from the exercise of an NQSO grant.

FINANCING TECHNIQUES

Unless you have sufficient available cash, it can be problematic to come up with the funds to exercise your stock options. You can borrow money — sometimes from the company itself — but there are other ways to finance your stock acquisition. Two such techniques are a cashless exercise and a stock swap.

A cashless exercise occurs when a broker lends you the cash needed to exercise the options and then, usually on the same day, helps you sell the stock. The broker recoups the funds you borrowed as well as a small amount of interest and you keep the excess funds. Your cost for the transaction is only the small interest charge.

A stock swap occurs when you use previously acquired company stock to pay for the options' exercise cost. Some companies will even grant you more options called "reloads" if you exercise an option with a stock swap. The number of additional options granted will be equal to the number of shares used to pay the exercise price.

RESTRICTED STOCK

The tax treatment of restricted stock differs considerably from stock options. If you receive compensation in the form of stock subject to a substantial risk of forfeiture, you can defer the recognition of income until the stock is no longer subject to that risk or you sell the stock. But you can elect, under Internal Revenue Code

tax tip

12

NQSO TAX CONSEQUENCES

If the 9,000 shares from exercise of the ISOs in Tax Tip 9 were from the exercise of NQSOs, you will recognize \$90,000 of taxable compensation from the exercise (9,000 shares at \$30 per share fair market value less the \$20 exercise cost). When you sell the stock after holding it for more than one year, from the exercise of NQSOs, you will have a long-term capital gain of \$135,000 (9,000 shares at \$45 less your basis of \$30 per share) at a maximum federal tax cost of \$27,000 (\$135,000 at 20%). Your net cash benefit from the exercise and sale will be:

Proceeds from the sale	\$ 405,000
Cost to exercise the shares (9,000 shares at \$20 per share)	(180,000)
Tax on exercise of options (\$90,000 at 39.6%)	(35,640)
Tax when you sell the shares (\$135,000 at 20%)	(27,000)
Net cash benefit	\$ 162,360

Note: This example does not take into consideration Social Security and Medicare taxes.

Section 83(b), to recognize ordinary income when you receive the stock. You must make this election within 30 days after receiving the stock. However, before making the election, make sure your company's deferred compensation plan with respect to compensation received in the form of stock is in compliance with the requirements discussed in the next section.

A Section 83(b) election can be extremely important if the income taxable to you on the grant date is negligible. Why? Because the election allows you to convert future stock appreciation from ordinary income into long-term capital gain income, which is therefore eligible to be taxed at the much lower long-term capital gain tax rate. If you do not make the election, you will pay tax at ordinary income tax rates on the appreciation when the restrictions lift regardless of whether or not you sell the stock and realize any gain on the sale. See Tax Tip 13.

The disadvantage of making a Section 83(b) election is that you pay tax at ordinary income tax rates in the current year. Plus, taxes paid as a result of the election can't be refunded if you eventually forfeit the stock or the stock's value decreases. You will have a capital loss when you sell the stock, but not if you forfeit it.

DEFERRED COMPENSATION PLANS

The tax treatment of compensation received through a deferred compensation plan depends on rules governing the initial election to defer compensation and the ability to take distributions. The initial election to defer compensation must generally be made in the calendar year prior to the year the income is earned.

Distributions can only be made:

- At scheduled times selected at the time of the deferral, based on either specific dates or the age of the participant.
- At the termination of employment or service.
- On the disability or death of the participant.
- To alleviate an unforeseen emergency.
- Following a change in the ownership or effective control of the employer.

Failure to follow these rules will result in:

- Taxation of the compensation 'deferred' at the time it is deferred or credited to the participant, or at the time it vests, whichever is later.

- An additional tax of 20% on top of the ordinary income tax on the amount treated as compensation.
- An interest assessment based on the IRS underpayment rate plus 1% on the tax liability resulting from the recognition of the compensation.

Note: *ISOs are excluded from these provisions because their exercise price must be equal to their value at the time of the grant.*

ADDITIONAL REPORTING REQUIREMENTS IN 2014 AND BEYOND

Every corporation that transferred to an employee a share of stock related to that person's exercise of an ISO during the current tax year is required to file Form 3921 with the IRS for each transfer made. Form 3921 includes the following information:

- The date the option was granted,
- The date the employee exercised the option,
- The number of shares of stock transferred to the employee,
- The fair-market value of the stock when the option was exercised, and
- The exercise price of the stock.

The forms are not required for an employee who is a nonresident alien. Employees must receive the Forms 3921 by January 31 following the end of the calendar year of reporting. The Form is also required to be filed with the IRS with the corresponding Form 1096 by February 28 following the calendar year reported (March 31 if filing electronically).

There are similar filing requirements for employee stock purchase plans.

tax tip

13

THE BENEFIT OF A SECTION 83(b) ELECTION FOR RESTRICTED STOCK

You receive 10,000 shares of restricted stock with a fair market value of \$3 per share. In anticipation of an initial public offering ("IPO"), a 10 for 1 stock split gives you 100,000 shares. At the time of the IPO, the stock is offered at \$6 per share and the risk of forfeiture is removed. You sell the shares two years later at \$8 per share.

If you make an Internal Revenue Code Section 83(b) election within 30 days after receiving the stock

- You have \$30,000 of compensation in the current year (10,000 shares at \$3 per share) with a maximum federal tax cost of \$11,880 (\$30,000 at 39.6%).
- Your basis in the stock is \$0.30 per share after the split (\$30,000 of realized compensation divided by 100,000 shares).
- Your holding period begins on the day you receive the stock.
- You realize a long-term capital gain of \$770,000 (100,000 shares at \$8 per share less your basis of \$0.30 per share) when you sell the stock, at a maximum federal tax cost of \$154,000 (\$770,000 at 20%).
- You incur a Medicare Contribution Tax on net investment income of \$29,260 (\$770,000 at 3.8%).
- You defer the tax you would have to pay when the company goes public to the time when the stock is sold.

If you don't make the election

- You don't have any compensation income this year.
- You have compensation of \$600,000 (100,000 shares at the IPO price of \$6 per share) when the company goes public (and the substantial risk of forfeiture no longer exists due to a change of control feature) at a maximum federal tax cost of \$237,600 (\$600,000 at 39.6%).
- You have a long-term capital gain of \$200,000 when you sell the stock (100,000 shares at \$8 per share less your basis of \$6 per share) at a maximum federal tax cost of \$47,600 (\$200,000 at 23.8%).

Income Tax Comparison

If you don't make the election	\$ 285,200
If you make the election	195,140
Tax savings by making the election	\$ 90,060

small business stock

Take advantage of preferential tax treatment available for
certain small business stock.

SMALL BUSINESS STOCK TAX BENEFITS

Although usually a more speculative investment, qualified small business (“QSB”) stock can qualify for preferential tax treatment, including:

- Rollovers of gain when the proceeds are used to buy other qualified small business stock,
- Reduced tax rates, or
- Ordinary loss rather than capital loss treatment, even if you have held the property long term.

QSB STOCK ROLLOVER

The gain from the sale of QSB stock is eligible for a rollover which allows you to defer the tax on the gain. QSB stock is defined as stock of a domestic corporation that:

- Originally issued its shares after August 10, 1993,
- Did not have gross assets exceeding \$50 million at any time before or immediately after issuing the stock, and
- Is actively engaged in a qualifying trade or business.

Note: *Businesses in certain industries, such as hospitality, financing, professional services, and mining, do not qualify for this treatment. Also, the rollover provision does not apply to stock of an S corporation.*

To qualify for this rollover, you need to both own the stock for at least six months and reinvest the proceeds within 60 days of sale in other QSB stock. The replacement stock you buy in the rollover then qualifies for a future rollover under the same rules. The basis in the replacement stock is reduced by the deferred gain from the rollover and inherits the holding period of the stock you sold for determining long-term capital gain treatment.

Note: *There is no carryover of holding period for purposes of determining the “more-than-six-months” requirement.*

If the stock is held by a pass-through entity of which you are a partner or shareholder, the entity can buy replacement stock and elect a tax-free rollover of the gain. Or it can notify you of the gain and you can defer tax by buying the replacement stock directly. The 60-day rule still applies, beginning on the day the entity sells the QSB stock — not when they notify you of the sale.

REDUCED TAX RATES

Taxpayers that hold QSB stock for more than five years may exclude the gain on the sale of the QSB stock from gross income; the amount of exclusion is staggered based on purchase dates:

- 100% of the gain if the stock was acquired after September 27, 2010 and before January 1, 2015, resulting from the enactment of TIPA.
- 75% of the gain if the purchase is after February 17, 2009 and before September 28, 2010.
- 50% of the gain if the purchase is before February 18, 2009 or after December 31, 2014.

The tax rate on the included gain is 28% meaning that the exclusion gives you an effective rate of 14% compared to the capital gains tax rate of 20% now in effect.

Note: *Rollovers into new QSB stock are still available as long as the replacement period is observed (see above).*

AMT ADJUSTMENTS

Although excludable for regular tax purposes, a portion of the excluded gain on the sale of QSB stock is an AMT preference item. The preference rates are also based on purchase dates:

- No preference adjustment for stocks purchased after September 27, 2010 and before January 1, 2015.
- 7% of the excluded amount if stock was acquired after February 17, 2009 and before September 28, 2010.
- 7% of the excluded amount for purchase dates that are before February 18, 2009 or after December 31, 2014.

The AMT preference that was originally scheduled to increase from 7% to 42% after 2012 has been permanently extended at 7% by ATRA.

Caution: *If you have net capital losses and take the exclusion, remember to consider that the AMT preference will cause you to utilize your AMT capital losses.*

chart

5

SECTION 1202 TAX RATE SCHEDULE SALES

Year of purchase	Regular net tax rate	AMT effective rate	Capital gain rate	Benefit if in AMT
Pre 2001-02/17/2009	14%	14.98%	20%	5.02%
02/18/2009-09/27/2010	7%	8.47%	20%	11.53%
09/28/2010-12/31/2014	0%	0%	20%	20%
Post 2014	14%	14.98%	20%	5.02%

Planning Tip: *Qualified small business stock held for five years can result in additional savings.*

Caveat: *Also you may have additional tax savings due to the exclusion of gain from the Medicare Contribution Tax of 3.8%.*

CLAIM ORDINARY — NOT CAPITAL — LOSSES

If you sell qualifying small business stock at a loss, you can treat up to \$100,000 (\$50,000 if married filing separately) of the loss as an ordinary loss rather than a capital loss, even if you have held the stock for more than 12 months. This loss is available toward the computation of net operating losses.

To qualify for this treatment you must have bought the stock at original issue and continuously held it until disposition. The issuing corporation must have had an initial capitalization of \$1 million or less at the time the stock was issued and derived not more than 50% of its income from investment activities (such as interest, dividends, royalties, rents, annuities, and sales or property exchanges) during the preceding five years.

passive and real estate activities

If you are an owner of a trade or business in which you do not materially participate, the passive activity rules can limit your ability to deduct losses. And, if you hold rental real estate investments, the losses are passive even if you materially participate, unless you qualify as a real estate professional. For 2014 and beyond, income from passive activities including rental real estate may also be subject to the 3.8% Medicare Contribution Tax on net investment income.

WHAT ARE PASSIVE LOSSES?

A passive loss is a loss from a business activity in which you do not materially participate. The most common ways you are deemed to materially participate in a business activity, and thereby avoid the passive activity limitation rules, are if:

- You participate more than 500 hours in the activity during the year,
- Your participation constitutes substantially all of the participation in the activity,
- You work more than 100 hours per year in the activity and not less than any other person, including non-owners, or
- You work more than 100 hours per year in each of several activities, totaling more than 500 hours per year in all such activities.

Passive activity losses are deductible only to the extent that you have income from other passive activities to offset the losses, or when you completely dispose of the activity. If you have passive losses that you cannot deduct in the current year, you can carry these losses forward to the following year, subject to the same passive loss rules and limitations.

Taxpayers should keep detailed records as to the time they spend on a particular activity, especially when they participate in several activities. Moreover, there are specific rules as to what kind of work qualifies as participation.

CONVERT PASSIVE LOSSES

If you fail the material participation tests and you have passive losses that are subject to a disallowance, there are things that you can do to convert the disallowed losses into tax-saving deductible losses:

Dispose of the activity

Sell any passive activity with current or suspended passive losses through a bona fide sale to an unrelated party. The losses become fully deductible when the activity is sold — including any loss on the disposition (subject to capital loss limitations). Even if you realize a gain on the sale, you can still save taxes as Tax Tip 14 illustrates. But you must also be aware of the phantom income trap discussed in Tax Tip 15.

Increase your participation in loss activities

For an activity that is generating losses, consider increasing your participation to meet one of the tests listed above, if possible, so you will not be subject to a passive loss limitation for the activity in that year.

Increase the hours you participate in real property trades or businesses

If you are engaged in real estate activities, increase your hours to meet the real estate professional test (discussed below). If you are a real estate professional, your real estate losses are no longer treated as passive losses, allowing you to deduct them in full.

tax tip

14

USE PASSIVE ACTIVITY CAPITAL GAINS TO RELEASE SUSPENDED ORDINARY LOSSES

If you have suspended passive activity losses, you may be able to dispose of a passive activity at a gain and not have to pay any taxes. In fact, you may actually reduce your taxes despite the gain.

As an example, assume you have suspended passive losses of \$300,000 from an activity that you have held for more than one year. You dispose of the activity in 2014 and realize a capital gain of \$340,000. You would actually save federal taxes of \$50,800 as well as receiving the proceeds from the sale.

This very favorable result is due to the fact that the suspended losses reduce your ordinary income at a 39.6% rate, whereas the long-term

capital gain from the sale would be taxed at no more than 20%. The suspended loss would therefore reduce your tax by \$118,800 (39.6% of \$300,000) but the capital gain would only increase your tax by \$68,000 (20% of \$340,000). If you have a net capital loss carryover that you might not be able to utilize, your savings would even be greater since the gain could be offset by the carryover loss, giving you the full tax benefit of the loss (but a reduced carryover).

The tax savings would be reduced by the 3.8% Medicare Contribution Tax in the amount of \$1,520 (3.8% of \$40,000, which is the difference between the \$340,000 capital gain and \$300,000 ordinary loss).

UTILIZE YOUR PASSIVE LOSSES

If you have passive losses from activities that you cannot convert into “material participation” activities as discussed above, you should consider taking the following steps to utilize your passive losses:

Decrease your participation in income activities

For an activity in which you materially participate that is generating non-passive income, limit your participation to less than 500 hours, if feasible. Therefore, the activity may become passive and you can use the income to offset your passive losses. However, make sure that you are not still considered active under the other tests. This may result in the additional 3.8% Medicare Contribution Tax to the extent that the income is not fully offset by passive losses. If you or your spouse have been materially participating in the activity for 5 out of the last 10 years, you will be deemed to be materially participating in the current year, even if you do not participate at all in the current year.

Invest in income-producing passive activities

Consider investing in an income-producing trade or business that you will not materially participate in. This creates passive income to you which can be offset until you utilize all of your passive losses from other unrelated passive activities. This may result in the additional 3.8% Medicare Contribution Tax to the extent that the income is not fully offset by passive losses.

tax tip

15

THE PHANTOM INCOME TRAP

Income in excess of your net proceeds can be triggered upon the disposition of real estate. This results from prior deductions based on indebtedness. Therefore, you may have deducted losses and/or received cash distributions in prior years that were greater than your actual investment in the property. This is sometimes referred to as negative capital.

Phantom income to the extent of your negative capital can also occur if you dispose of your interest in the pass-through activity, even if the underlying property remains unsold. However, to the extent your prior year’s passive losses were suspended, you would have an ordinary loss to offset this income. As Tax Tip 14 demonstrates, this can actually be a tax savings opportunity.

IDENTIFY YOUR ACTUAL PASSIVE LOSSES

When identifying your net passive losses, take into account the following:

- Investment and trading partnerships, S corporations and LLCs that only generate portfolio income, such as capital gains, interest and dividends, are not passive activities, even if you do not participate in the activity. Therefore, the investment income cannot offset your passive losses.
- Interest expense on money borrowed to fund your investment in a passive activity is treated as an additional passive activity deduction, subject to the same disallowance rules.
- Portfolio income, such as interest and dividends, from a passive activity cannot offset the passive losses from the activity.

LOSSES FROM LIMITED LIABILITY COMPANIES (“LLCs”) AND LIMITED LIABILITY PARTNERSHIPS (“LLPs”)

Generally, limited partners of an LLP are presumed to not be materially participating in the business, and thus these activities would be considered passive. There is an exception to the presumption of no material participation where an individual holds an interest in a limited partnership as both a limited partner and a general partner. In this case, such person can avoid the passive loss rules with respect to the limited partnership interest.

The courts have addressed whether the rules that apply to limited partnership interests also apply to members of an LLC. Although the IRS does not concur, recent cases have held that such members are not limited partners for purposes of determining their material participation in these activities. Rather, the facts and circumstances must be examined to ascertain the nature and extent of the participation of the member.

PASSIVE ACTIVITY CREDITS

Tax credits from passive activities, such as rehabilitation and low-income housing credits, can reduce your regular tax liability. However, for properties placed into service prior to 2008, these credits are limited to the amount of your regular tax attributable to your net passive income, and cannot be used to reduce your AMT. For post-2007 investments, both the qualified Rehabilitation Tax credit as well as the low-income housing credit can offset both regular tax and AMT to the extent of your tax attributable to passive activity income. If you have a net overall passive loss, the disallowed credits are carried forward and can be used to offset

tax tip

16

DEFER YOUR GAIN USING
THE INSTALLMENT SALE METHOD

In 2014, you sell a nonresidential building for \$2,000,000, net of closing costs, which you bought in 1998 for \$600,000 (including subsequent improvements). At the time of the sale, you had accumulated depreciation of \$400,000. Therefore your taxable capital gain is \$1,800,000 (\$2,000,000 less the cost of \$600,000 plus the accumulated depreciation of \$400,000). You will receive a 20% down payment of \$400,000 before the end of the year and receive a mortgage from the buyer for the balance, with the first payment due in January of 2015. By using the installment sale method, you will defer \$290,000 of federal tax to future years as the mortgage is paid down by the buyer.

	Full payment in current year	Installment sale method
Taxable gain in year of sale	\$ 1,800,000	\$ 360,000
Federal tax cost this year	380,000	90,000
Deferred tax		290,000

The taxable gain using the installment sale method is computed by multiplying the down payment of \$400,000 by the gross profit ratio of 90%. The gross profit ratio is the taxable gain of \$1,800,000 divided by the total proceeds of \$2,000,000.

Caution: You are subject to a tax rate of 25% on the portion of the gain that is attributable to previous non-accelerated depreciation deductions on real property on a “first in first out” (FIFO) method. Also, this method may not be advantageous when the tax rates of future years’ installments are expected to increase.

Note: The 3.8% Medicare Contribution Tax on net investment income, which is not reflected in the above illustration, may apply to the gain and related interest net investment income.

your taxes in future years. If you have net passive income but the credits are limited because of the AMT, you can carry the credits forward to offset your regular tax in future years when you are not in the AMT.

REAL ESTATE ACTIVITIES

Real estate activities are passive by definition, unless you qualify as a real estate professional. Regardless of whether you are a real estate professional or not, there are ways you can defer the tax from the gain on the sale of real estate properties, as discussed below. A separate rule allows you to deduct up to \$25,000 of losses each year if you actively participate in a rental real estate activity. This special allowance is reduced, but not below zero, by 50% of the amount by which the taxpayer’s AGI exceeds \$100,000. It is completely phased out when AGI reaches \$150,000.

REAL ESTATE PROFESSIONAL RULES

If you are a real estate professional, you can deduct rental real estate losses in full since you are not subject to the passive loss limitations. To qualify, you must annually:

- Perform more than 50% of your personal services in real property trades or businesses in which you materially participate, and
- Have more than 750 hours of service in these businesses.

In addition, you must materially participate in the rental real estate activity in order for that activity to be considered nonpassive. For example, a real estate broker who owns one or two apartments for rent might be a real estate professional but might not be considered to materially participate in the rental activity.

In the case of a joint return, the real estate professional requirements are satisfied if, and only if, at least one of the spouses separately satisfies both requirements. In regards to the material participation test though, work performed by a taxpayer’s spouse in a trade or business is treated as work performed by the taxpayer.

Real estate professionals are not subject to the 3.8% Medicare Contribution Tax on net investment income, including capital gains, from rental real estate activities in which they materially participate.

Tax Tip: *If you fail either test and you have real estate losses, try to increase your hours of service to meet the tests. For purposes of the real estate professional test, a taxpayer can elect to aggregate all of their real estate rental activities for purposes of determining material participation. Once the election is made, it continues unless the IRS consents to its revocation.*

INSTALLMENT SALE REPORTING BENEFITS

An installment sale can be a very tax-efficient method to defer a gain on the sale of real estate for future years. If you are contemplating a sale of real estate, consider agreeing to receive one or more payments after the year of the sale so that you are eligible to report the gain on the installment sale method. By doing so, you can defer much of the tax to future years.

The installment method allows you to report gain only as you receive principal payments. By simply deferring one payment until next year, you can defer the tax on that portion of the sales price by a full year (see Tax Tip 16). The gain you report in future years retains the same character as when it was sold. Therefore, if property that is sold had a long-term holding period, the gain reported in future years will also be long-term except for the interest element if interest is not stated on the deferred payments. You may also be entitled to interest payments on seller-financed mortgages or loans. The interest payments are taxable as ordinary income when received. You can use the installment sale method even if you owned the property through an entity in which you hold an interest if the entity does not elect out of the installment method. However, if the face amount of all installment receivables you own at December 31 exceeds \$5 million, an interest charge on the deferred tax (assessed as an additional tax) will apply.

Caution: *Even if no payments are received in the year of sale, any recapture income treated as ordinary income under IRC sections 1245, 1250, or 751 is recognized immediately. Furthermore, when the deferred gain on the sale of real estate is attributable to both unrecaptured section 1250 gain (maximum tax rate of 25%) and regular capital gain (maximum tax rate of 20%), the unrecaptured section 1250 gain is reported first upon the receipt of principal payments.*

LIKE-KIND EXCHANGES

If you exchange investment or business property for property of a like-kind (same nature or character), you do not realize taxable gain at the time of the exchange, except up to the amount of any cash or other boot received (such as unlike property). The like-kind exchange rule gives you the opportunity to defer taxes until you sell the property that you receive in the exchange.

Like-kind exchanges typically are used when selling real estate and can yield substantial tax benefits. Even though the definition of like-kind property allows for a certain amount of flexibility, such as permitting an exchange of land for a building if both are held for investment purposes, specific and complex rules govern like-kind exchanges. These rules include a requirement that you cannot directly receive any cash or other consideration and must identify the replacement property with the qualified intermediary holding the funds within 45 days after the sale.

Caution: *Like-kind exchanges do not apply to the sale of stocks, bonds, other securities and other intangible assets such as a partnership interest. Also, the sale of your principal residence does not qualify for a like-kind exchange.*

Note: *Like-kind exchange reporting is not elective. Consider not engaging in a like-kind exchange if a taxable event is the better approach (e.g., when you have expiring losses, or state tax considerations).*

principal residence sale and rental

A principal residence may be one of the most tax-efficient investments you can own since you can exclude as much as \$500,000 of the gain on its sale.

The sale of your principal residence is eligible for an exclusion that allows up to \$500,000 of the gain to be tax free, if you file as married jointly and meet the tests listed below (other taxpayers can exclude up to \$250,000 of the gain). But any portion of the gain attributable to a home office or rental use is not eligible for the exclusion.

PASS THESE TESTS AND EXCLUDE UP TO \$500,000 OF YOUR GAIN

To qualify for the full amount of the exclusion, you must have all of the following:

- Owned your principal home for at least two years. Your principal residence can be a house, houseboat, mobile home, cooperative apartment or condominium. The two-year rule may consist of twenty-four full months or 730 days. If you are filing a joint return, only one spouse need qualify in order for both spouses to benefit from the exclusion.
- Used the home as your principal residence for at least two years, in the aggregate, during the five-year period ending on the sale end date.
- Not have excluded the gain on a home sale within the last two years.

With regards to principal residence, occupancy of the residence is required. Short temporary absences, such as for vacation or other seasonal absences, even if the property is rented during such temporary absences, will be counted as periods of use.

A pro-rata exclusion is allowed if you fail the above tests as a result of a hardship, which includes a change in employment, health reasons, multiple births from the same pregnancy, divorce or legal separation, or other unforeseen circumstances and natural disasters. The pro-rata exclusion is generally equal to a fraction, the numerator of which is the number of months you used and owned the house as your principal residence within the past two years and the denominator is 24.

A reduction of the exclusion is required to the extent that any depreciation was taken after May 6, 1997 in connection with the rental or business use of the residence, unless there was a separate structure for the rental or business use. Regardless, there will be a taxable gain equal to the amount of depreciation previously deducted and it will be taxed at the special 25% capital gain rate.

DO NOT ASSUME YOU CAN ALWAYS SELL YOUR HOUSE TAX-FREE

Many people mistakenly think that you can defer a gain from the sale of a principal residence if they buy a new home that costs more than the selling price of the old home. That law was repealed many years ago (1997 to be exact). Under current law, you will have to pay taxes to the extent the net gain exceeds the maximum exclusion amount. Here is an example for a married couple, filing jointly:

Net proceeds on sale	\$2,000,000
Tax basis (including capital improvements)	600,000
Net gain on sale of home	1,400,000
Allowable exclusion	(500,000)
Taxable gain	900,000

2014 federal tax at maximum 20% capital gain rate and the 3.8% Medicare

Contribution Tax on net investment income	\$ 214,200
--	-------------------

Notes: This gain may be subject to state income taxes. See the chapter on state tax issues.

The taxable gain will also be subject to the 3.8% Medicare Contribution tax on net investment income. The excludable gain (\$250,000/500,000) is not subject to the tax.

NO EXCLUSION ALLOWED FOR NONQUALIFIED USE OF PROPERTY

Beginning with sales or exchanges of your principal residence after December 31, 2008, you will no longer be able to exclude gain allocated to periods of nonqualified use of the property.

Generally, nonqualified use means any period after 2008 where neither you nor your spouse used the property as a principal residence. To figure the portion of the gain that is allocated to the period of nonqualified use, multiply the gain by the following fraction:

Total nonqualified use during period of ownership after 2008, divided by total period of ownership.

A period of nonqualified use does not include:

- Any portion of the five-year period ending on the date of the sale that is after the last date you (or your spouse) use the property as a principal residence.

- Any period (not to exceed an aggregate period of 10 years) during which you or your spouse are serving on qualified official extended duty as a member of the uniformed services or foreign services of the United States, or as an employee of the intelligence community.
- Any other period of temporary absence (not to exceed an aggregate period of two years) due to change of employment, health conditions, or such other unforeseen circumstances as may be specified by the IRS.

SPECIAL CONSIDERATION FOR THOSE WHO FILE JOINT RETURNS

If you are married filing jointly, things can get a little more complicated if you want to be eligible to exclude the maximum gain of \$500,000. While either you or your spouse can meet the two-year ownership test, the following rules apply to the use and prior two-year exclusion tests:

- Both you and your spouse must meet the two-year use test. If only one spouse meets the test, the exclusion is limited to \$250,000.
- Both you and your spouse must meet the “no exclusion in prior two years” test. This can be an issue if you sell your home, marry a homeowner and then jointly sell that home within two years. If the spouse meeting the test is the homeowner, he or she will still be eligible for the \$250,000 exemption, and the spouse failing the test is not eligible for a pro-rated exemption, unless the hardship rule applies, as discussed above.

SALE BY SURVIVING SPOUSE

A surviving spouse who has not remarried and sells a principal residence within two years from the date his or her spouse died can exclude \$500,000 of gain rather than \$250,000.

KNOW YOUR TAX BASIS

To minimize your taxable gain, you will want to have the highest tax basis possible, and have the documentation to substantiate the basis calculation. So be sure to maintain accurate records, including information on your original cost (including closing costs) and subsequent capital improvements.

Basis must be reduced by any pre-1988 deferrals of gain (i.e., when the law allowed taxpayers to defer tax by buying a new principal residence costing more than the net proceeds of their principal residence).

LOSS ON THE SALE OF YOUR HOME

Based on historical evidence, you would expect your home to appreciate after you purchase it. However, if you only hold it for a short time, or if unusual market conditions prevail, it is possible to lose money on the sale of your principal residence, especially after factoring in closing costs. Since a loss on the sale of a personal residence is not deductible, you do not gain a tax benefit from the loss. But if part of your home was rented or was used for your business, the loss attributable to that portion will be deductible, subject to various limitations, since it is a business loss rather than a personal loss.

RENTAL OF VACATION OR SECOND HOME

You should consider the tax consequences if you are planning to rent out your vacation or second home. Proper planning can help you maximize tax savings.

Tax-free rental income

If you rent your vacation home or principal residence for 14 days or less during the year, the rental income is tax-free, regardless of the amount of rent you receive. Even though you do not have to report this income, you can still deduct the full amount of qualifying mortgage interest and real estate taxes as itemized deductions on your tax return.

Rental expenses deductible in full

If you personally use your vacation home for no more than the greater of 14 days a year or 10% of the total number of days it is actually rented out, the property is considered to be a rental property rather than a personal residence. As rental property, all ordinary and necessary expenses of maintaining the home are deductible against the rental income you receive. However, if your expenses exceed your income, your deductible loss may be limited since the rental activity is considered to be a passive activity. See the chapter on passive activity loss limitations for a more detailed discussion.

Rental expenses limited by personal use

If you personally use your vacation home for more than the greater of 14 days or 10% of the total number of days it is rented (or available for rental, under a Tax Court case), it is considered a personal residence and your deductions may be limited, as follows:

- Qualifying mortgage interest and real estate taxes are deductible as rental expenses based on the number of days rented divided by the total number of days in the year.
- The balance of the real estate taxes and mortgage interest are deductible as itemized deductions.
- Other rental expenses, including depreciation, utilities and repairs, are deductible based on a ratio of the days the property was rented over the total number of days the property was used for rental and personal purposes.
- Expenses directly attributable to the rental activity itself (such as broker commissions on the rental income or advertising costs) are deductible in full.
- Net overall losses from the rental of a personal use residence are not currently allowable but are carried forward and available for use against income from the property in future years, including a gain on the sale.

To the extent that the property qualifies as rental real estate (personal use less than 10% or 14 days) losses may be subject to the passive loss rules. See the chapter on passive and real estate activities for more information.

REPORTING REQUIREMENTS

You would typically report the sale of your principal residence on Schedule D of your personal income tax return. However, you do not have to report the sale of your principal residence on your income tax return unless:

- You have a gain on the sale. You would typically show the entire gain on the Schedule D of your tax return and then reduce your gains by the excludible portion.
- You have a loss and you received Form 1099-S. Since the IRS matches all Forms 1099 to the return, you would want to show the sales proceeds on the return and that there is no gain on the sale. Remember personal losses are not deductible.

charitable contributions

Your ability to control when and how you make charitable contributions can lower your income tax bill, effectively reducing the actual cost of any gift you make, while fulfilling your philanthropic objectives.

BASIC PLANNING IDEAS

You can save substantial taxes by simply:

- Using long-term appreciated property to fund your charitable contributions.
- Timing your contributions so that they are made in a year when your tax bracket will be higher.

More sophisticated planning techniques are discussed in this chapter, including using donor-advised funds, private foundations, and charitable trusts, to help you combine tax planning with your charitable goals.

For 2014, the benefit of the charitable contribution deduction may be reduced due to the itemized deduction limitation ("Pease" provision) that applies when AGI exceeds \$254,200 (\$305,050 for joint filers). For 2015, the thresholds increase to \$258,250 (\$309,900 for joint filers). Your itemized deduction limitation will be the lesser of (a) 3% of AGI above the applicable amount, or (b) 80% of the amount of the itemized deductions. Other limitations also apply (see Chart 6). Therefore, careful planning must be done to determine the true tax benefit of charitable contributions being considered. Multi-year income tax projections should be included as part of the charitable planning process.

USE LONG-TERM APPRECIATED PROPERTY

You should always use appreciated publicly traded securities that you have held for more than one year, rather than cash, to fund

significant charitable contributions. You should also consider using other eligible appreciated property, such as artwork, that you can give to a museum. By doing so, you can get the double tax benefit of receiving a deduction equal to the full fair market value of the security or property (as if you contributed cash) and avoid paying capital gains tax on the appreciation (see Tax Tip 17).

There are limitations on the amount of contributions that you can deduct in a given year based on your AGI, as Chart 6 indicates. While a contribution of long-term appreciated property is generally limited to 30% of your AGI rather than the 50% limit that applies to cash, this is still usually a high ceiling and any disallowed contributions can be carried forward for the next five years.

TIME YOUR CONTRIBUTIONS

Always consider your tax rate for this year and future years before deciding when to make your contributions. Your tax rate may vary significantly in a year of unusual financial events, but more common is the impact that the AMT will have on your contributions. If possible, make your charitable contributions in a year that you are not likely to be in the AMT. In 2014, as a result of ATRA, the difference between the maximum regular tax rate of 39.6% and the AMT rate of 28% is 11.6%.

If you expect your maximum tax rate to be the same next year, prepay your charitable contributions this year (if feasible and desired) to gain the advantage of accelerating the tax deduction.

The year that you can take the deduction is the year the charity actually receives the property. Therefore, make sure that you

tax tip

17

THE BENEFIT OF CONTRIBUTING LONG-TERM APPRECIATED SECURITIES RATHER THAN CASH

A stock that you have owned for many years has appreciated to \$100,000 from its original purchase price of \$60,000. You have decided that it may have very little future growth potential. Instead of selling the stock, you donate it to your favorite charity. Your tax savings by donating the stock rather than cash would be:

	Cash Donation from Proceeds	Stock Donation
Tax savings on contribution (\$100,000 at 39.6% in 2014)	\$ 39,600	\$ 39,600
Capital gains tax if stock was sold (\$40,000 at 23.8%* beginning in 2014)	(9,520)	0
Net federal tax savings	\$ 30,080	\$ 39,600

*Includes 3.8% Medicare Contribution Tax on net investment income.

satisfy the legal transfer requirements for contributions of securities or other property that you make prior to year-end. One way to do this is by having the securities transferred directly from your brokerage account to the charity's brokerage account before year-end, thereby accelerating the process.

CONTRIBUTIONS DEDUCTIBLE ONLY AT COST RATHER THAN FAIR MARKET VALUE

Certain types of property will not avail you of a charitable deduction equal to the appreciated fair market value of the property. So, before contributing property, consider its eligibility and other options available to fund your charitable contributions. These types of property include:

Securities held for 12 months or less

If you contribute securities that you have held for 12 months or less, your charitable deduction is equal to the lesser of the fair market value or your basis in the stock. Therefore, you lose the deduction for any of the appreciation of the security.

Securities with a fair market value less than your cost

Never use these securities to fund your contributions since your deduction will be limited to the lower fair market value of the stock and you will permanently lose the benefit that you would have received had you sold these securities at a capital loss.

Other ordinary income property

The charitable deduction for ordinary income property is limited to the lesser of the fair market value or your basis in the property, even if you have held the property more than 12 months. Ordinary income property includes inventory items and property subject to depreciation recapture.

Tangible personal property

To get the property's full fair market value as a deduction, the appreciated property must qualify for long-term capital gain treatment had it been sold and the charitable organization must use this property in its exempt function (such as a painting given to a museum). Otherwise, your deduction will be limited to the lesser of your basis or the property's fair market value. Furthermore, if the charitable organization disposes of the property within three years, the donor will be required to include as ordinary income for the year of the disposition the difference between the charitable deduction and the donor's basis. However, if the organization certifies to the IRS, in writing, that the property's use was, or was intended to be, related to its exempt purpose or function, this rule would not apply.

Vehicles

If the charitable organization does not use the vehicle in its exempt function, but instead sells the vehicle (for over \$500),

your charitable deduction will be limited to the gross proceeds received from the sale by the charity, not the appraised value.

Fractional interest

A fractional interest contribution consists of a gift of an undivided portion of property to a charity that uses the property in connection with its exempt purposes (e.g., an interest in artwork that is contributed to a museum). In this situation, your initial charitable deduction will be the fair market value of the property multiplied by the fractional interest contributed.

As an example, let's say you donate the use of a painting valued at \$400,000 to a museum for three months and you retain the painting for the remaining nine months. Your charitable deduction would be \$100,000 based on 25% of the value of the painting at the time of the contribution (three months of the year). If you gift the use of the same painting next year for six months (additional three months or additional 25%) and the fair market value of the painting has increased to \$440,000, your contribution would not be \$110,000 based on 25% of additional contribution multiplied by the value of the painting when contributed. Instead, it would be \$100,000 since a subsequent fractional interest donation of the same property is limited to the lesser of the value at the time of the initial fractional contribution or the value on the additional contribution date.

Beware that "recapture" will occur if you make an initial fractional contribution of artwork, then fail to contribute all of your remaining interest in the artwork to the same donee on or before the earlier of the date that's 10 years from the initial fractional contribution or the date of your demise ("specified period"). Recapture consists of an income inclusion in the year in which the specified period falls and is in the amount that was previously deducted plus interest running from the due date of the return for the year of the deduction until paid and a penalty of 10% of the amount of the income inclusion.

Remainder Interest in Real Property

The owner of real estate, such as a vacation home, can have full use of the property throughout his or her life and leave a remainder interest to a charitable organization. You will receive a charitable deduction based on the present value of the remainder interest in the property in the year that the remainder interest is contractually conveyed, not when the charity actually takes title to the property. Therefore, you receive a current deduction even though the charity does not receive the property until the condition of the conveyance occurs (death of the donor).

Conservation Easement

A conservation easement is a contribution of a real property interest to a charitable organization that uses the easement exclusively for conservation purposes. A real property interest for this purpose

includes a perpetual restriction on the use of the real property. The donor does not give up ownership, control, or enjoyment of the land. The easement only restricts what can be done on or to the land. In the typical case, a perpetual conservation easement is given to a qualified conservation organization. The charitable deduction is equal to the difference in the fair market value of the property with and without the easement and requires a qualified appraisal. This type of charitable contribution often gives the IRS cause to scrutinize the valuation on which the deduction is based.

Unreimbursed expenses

Although you cannot get a charitable deduction for services performed on behalf of a charitable organization, you may deduct incidental unreimbursed expenses incurred while performing these services. Travel expenses to and from the place where the services are performed are deductible. You can deduct expenses of operating your car including tolls and parking fees but not expenses connected with maintenance of the car such as depreciation, repairs or car insurance. Alternatively, you can deduct 14¢ per mile. Reasonable expenses for meals and lodging while “away from home” in performing charitable services are deductible as well. Expenses that are considered personal and not specifically incurred in the performance of services on behalf of a charitable organization are not deductible.

IRA DISTRIBUTIONS AS CHARITABLE CONTRIBUTIONS

The provision for qualified charitable distributions, which allows IRA and inherited IRA owners age 70 1/2 or older to transfer portions of their accounts to qualifying charities tax-free while satisfying all or a portion of their required minimum distributions, has been extended through December 31, 2014 as a result of TIPA.

According to the provision, if you are age 70 1/2 or older, you can make tax-free distributions to charity from an IRA of up to \$100,000 per year. These distributions must be made directly to the charity and are neither includible as income nor deductible as an itemized deduction on your tax returns.

In order to qualify, the charitable distribution must be made to a public charity. Payments to a donor-advised fund, supporting organization or private foundation do not qualify.

This technique has additional benefits since, unlike a taxable distribution, the distribution is not included in AGI. This may therefore impact the Medicare Contribution Tax on net investment income, the 3% reduction of itemized deductions, and the limitation of personal exemptions.

HOW TO ACCELERATE THE TAX BENEFIT OF FUTURE CONTRIBUTIONS AND MEET PHILANTHROPIC GOALS

Certain charitable vehicles allow you to accelerate the tax benefit of future contributions into the current year while retaining practical control over when such contributions are actually made to your intended charity. The most common charitable planning vehicles include:

- Donor-Advised Funds
- Private Foundations
- Charitable Trusts

DONOR-ADVISED FUNDS VS. PRIVATE FOUNDATIONS

Contributing to either a donor-advised fund or a private foundation both offer a tax deduction (subject to different limitations), but they have their differences. The donor-advised fund is the simpler and less costly alternative. Using a private foundation requires you to create a legal entity with annual tax filings, subject to an excise tax on net investment income and other potential excise taxes (see the discussion below). Yet, despite these disadvantages, the private foundation can still be a preferable alternative if substantial amounts are involved, so consider the following similarities and differences when evaluating either of these options:

Obtain a large charitable deduction in the current year

Both a donor-advised fund and a private foundation allow you the ability to avoid paying capital gains tax on appreciated marketable securities held more than one year when such property is donated. However, a private foundation is subject to an excise tax of 2% on its net investment income, including capital gains on the appreciated property you contributed. The excise tax can be reduced to 1% depending on the foundation’s level of granting in a given year. An income tax will be assessed on a foundation’s unrelated business income as will an onerous excise tax if the foundation is involved in various acts of self-dealing or other prohibited transactions.

Retain control of the timing, amount, and payment of future charitable contributions

The donor-advised fund permits you to make your contributions to a public charity that will retain them in an account (which can bear your name) for future charitable distributions. Typically, the fund will follow your charitable preferences, though it is not legally obligated to do so. The private foundation generally gives you more direct control, which can sometimes make it easier to achieve

your investment goals and ensure that your charitable objectives are accomplished.

Maintain management control of the private foundation's investments

This can be one of the major advantages of the private foundation. You retain full control over all investment decisions, allowing you to use your investment expertise and resources to maximize the assets in the foundation.

Involve family members

A private foundation can provide intangible benefits by involving family members in a collaborative philanthropic effort. Your family can benefit from having the responsibility of making management decisions and formulating a mission statement to satisfy the family's overall charitable desires. The management responsibilities of the foundation can be passed down from one generation to another, perpetually keeping it in your family's name. It is also possible to give your children the ability to recommend charitable distributions for your donor-advised fund.

Minimum distributions

A private foundation is subject to a rule which requires an annual distribution to charities equal to at least 5% of the average value of its assets. Excise taxes will be assessed on foundations that fail to distribute the required minimum distribution. Typically, although not always, the actual earnings and appreciation of the assets in the foundation are greater than the 5% minimum distribution. Donor-advised funds do not have a minimum grant distributions rule.

CHARITABLE TRUSTS

A charitable trust can provide the following benefits:

- Convert appreciated property into an annuity.
- Diversify your portfolio and defer capital gains tax.
- Obtain a current-year charitable deduction for the present value of a remainder interest left to charities by using a charitable remainder trust. However, with the present low interest rate environment this deduction is lower than in the past.
- Pass appreciation on to your beneficiaries by using a charitable lead trust.

There are two types of charitable trusts — charitable remainder trusts ("CRTs") and charitable lead trusts ("CLTs"). You can set up either as an annuity trust or a unitrust. The annuity trust pays a fixed dollar annuity that is based on a fixed percentage of the initial trust value. The unitrust pays an annuity that will vary since it is based on a fixed percentage of the trust's annual fair market value, which necessitates annual valuations.

CHARITABLE REMAINDER TRUSTS

A CRT can help you diversify your portfolio and increase your annual income stream while satisfying charitable desires (see Tax Tip 18). If you contribute highly appreciated securities to a CRT,

tax tip

18

USE A CRAT TO DIVERSIFY YOUR PORTFOLIO AND PROVIDE YOU WITH AN ANNUITY

As an original shareholder in a company that went public, you now own stock that is worth \$1,000,000 with a tax basis of only \$400,000. You would like to diversify your portfolio but you have been reluctant to do so because of the capital gains tax.

One option you might want to consider is establishing a charitable remainder annuity trust ("CRAT"). By doing so, you can combine your desire to diversify your portfolio with your charitable giving intentions. The trust can sell the stock and pay no tax on the \$600,000 gain at the time of the sale since the trust is a nontaxable entity. The trust can then use the proceeds from the sale to purchase other investments which, in turn, diversifies your overall portfolio allocation since you retain an annuity interest in the trust.

Assuming you choose a 10% payout rate, you will receive an annuity of \$100,000 for the term of the trust, much of which will be eligible for the net long-term capital gains tax rate of 23.8% (inclusive of the Medicare Contribution Tax on net investment income) based on the undistributed gain of \$600,000. You will also receive a current-year charitable contribution for the present value of the remainder interest going to charities. Remember, though, that the family loses the remainder value since it will pass to charities at the end of the trust's term.

such as a concentrated position in low basis stock, the CRT can sell them without incurring a current capital gains tax. You will not only diversify your portfolio and reduce market risk, but you will also receive an annuity based on the securities' fair market value. You will be taxed as you receive annuity payments, as discussed below. The annuity you receive will probably exceed the income you are currently receiving from the contributed securities (but you will be foregoing future appreciation in excess of the annuity).

The CRT's assets grow tax-deferred because it is not subject to tax and you only pay tax on the annuity payouts as you receive them. Therefore, the CRT can immediately sell the appreciated stock that you contributed and spread out the tax on the gain over the life of the annuity (you may never actually pay the full tax). The taxable nature of the annuity is based on the trust's undistributed accumulated income at year-end, subject to the ordering rules. The assets remaining at the end of the trust's term go to your designated charities.

You can choose to have the annuity paid to your beneficiaries instead of yourself, but you must consider gift tax consequences

since you will have made a gift to your beneficiaries equal to the annuity's present value. The gift amount is set at the date of the transfer to the CRT. Typically, this may result in lower overall gift and estate taxes if the IRS tables used for determining the present value of the annuity payouts are at a rate that is lower than the actual growth rate experienced by the CRT. You can also reduce overall family income taxes if the beneficiary's tax rates are lower than your tax rates.

To qualify as a CRT, the trust must satisfy the following rules:

- The term of the trust cannot exceed 20 years and the trust must be irrevocable.
- The annual annuity income payout to the beneficiary must be at least 5%, but not greater than 50% of either the initial amount transferred to an annuity trust or the annual year-end fair market value of the assets for a unitrust.
- The value of the remainder interest to the charity must be at least 10% of the trust's initial fair market value.

chart

6

CHARITABLE CONTRIBUTION LIMITATIONS BASED ON ADJUSTED GROSS INCOME

The maximum deduction you are allowed for your charitable contributions is subject to a limitation based on your AGI, as noted below. However, see the discussion above and notes below for ways to increase some of the limitation amounts. To the extent that your deduction is limited, you can carry the disallowed contributions forward for five years, subject to the same annual percentage limitations.

Contributions Made To	AGI Limitation	
	Cash and Ordinary Property Income	Appreciated Capital Gain Property
Public Charities*	50%	30%
Nonoperating Private Foundations	30%	20%
Private Operating Foundations**	50%	30%

These ceiling amounts can be increased in the following ways:

- If a nonoperating private foundation makes qualifying distributions out of its corpus within 2 1/2 months after the end of its taxable year equal to 100% of the contributions it received during that year, the 30% limitation for cash and ordinary income property increases to 50% and the 20% limitation for appreciated capital gain property increases to 30%.
- The 30% limitation for appreciated capital gain property donated to public charities and private operating foundations can be increased to 50% by electing to reduce your contribution to the property's cost. This is only advisable if your contributions would otherwise be limited and it is unlikely that you will benefit from the carryover in the future.

*Donor-advised funds are treated as public charities.

** Private operating foundations are nonpublicly supported organizations that devote most of their earnings and assets to the conduct of their own tax-exempt purposes.

CHARITABLE LEAD TRUSTS

The CLT is basically the reverse of the CRT. The annuity is paid to the charity and you or your beneficiaries receive the remainder interest at the end of the trust's term. But the income tax implications are complex because you are only allowed a charitable deduction if the CLT is structured as a grantor trust (with you reporting the annual income and charitable deduction). If the trust is set up as a nongrantor trust, you don't receive a charitable deduction but you are also not taxed on the income the trust earns.

Despite these complexities, a CLT can be an effective gift and estate tax planning tool because you are subject to gift tax only on the present value of the remainder interest you are giving away. This allows you to gift a much greater interest in assets, such as stock in an early stage company, and pay little or no gift taxes. If the stock value grows significantly, your beneficiaries will enjoy the excess appreciation since the growth will be greater than the earnings rate in the IRS tables for valuing the present value of the remainder interest, which has recently been very low. However, they will have to wait until the trust term ends in order to receive the remaining assets.

SUBSTANTIATE YOUR CASH CHARITABLE CONTRIBUTIONS

Regardless of the amount of the contribution, cash donations to charitable organizations must be substantiated with a bank record or written communication from the donee organization showing the name of the donee organization, the date the contribution was made, the amount of the contribution and the value of any benefit to you, if any. Therefore, you must make sure to obtain the necessary documentation to support your cash charitable donations. A cancelled check is no longer sufficient substantiation if the contribution is \$250 or more. The written acknowledgement must explicitly state whether any goods or services were received in connection with the donation. This rule eliminates your ability to deduct weekly cash contributions made at religious gatherings unless you can meet the substantiation rules.

NONCASH CONTRIBUTION APPRAISAL REQUIREMENTS AND LIMITATIONS

If you contribute property worth more than \$5,000, you are required to obtain a qualified appraisal. Also, you must complete and attach Form 8283, Noncash Charitable Contributions Appraisal Summary, to your tax return. This form must include the following:

- The qualified appraiser's signature, and
- An authorized person from the charitable organization must complete, sign and date the appropriate section of the form, indicating the date of the contribution and whether the property is being used for the charity's exempt purpose.

A complete copy of the signed appraisal must be attached to your tax return if you contribute any of the following:

- Artwork appraised at \$20,000 or more.
- Any item, or group of similar items, for which you are claiming a charitable deduction greater than \$500,000.
- Easements on buildings in historic districts.

Caution: *A qualified appraisal must meet certain criteria to be acceptable:*

- *The appraisal must be made not earlier than 60 days before the date you contribute the property and before the due date (including extensions) of your tax return on which the deduction is claimed.*
- *The appraiser must be an individual who has either earned an appraisal designation from a recognized professional appraisal organization, has met certain minimum education and experience requirements, regularly prepares appraisals for which he or she is paid, or demonstrates verifiable education and experience in valuing the type of property being appraised.*

Contributions of similar items of property with an aggregate value exceeding \$5,000 are subject to the same requirements. For example, if you contribute clothing valued at \$3,000 to one charity and your spouse contributes clothing valued at \$2,500 to another charity, you would need to obtain qualified appraisals for both contributions. The appraisal requirements do not apply to contributions of cash, publicly traded securities or non-publicly traded stock worth less than \$10,000.

If these requirements are not satisfied, no charitable deduction is allowed, even if the charity received the property and the value is not in dispute.

Medicare Contribution Tax on net investment income

Charitable gifts are not deductible for purpose of calculating 3.8% Medicare Contribution Tax on net investment income of high income taxpayers.

IRS GUIDANCE TO EBOLA-RELATED PHILANTHROPY

On Oct. 29, 2014, the IRS issued two notices responding to the dire need for charitable relief to fight the Ebola outbreaks in the West African nations of Guinea, Liberia and Sierra Leone. The first, Notice 2014-68, offers guidance for leave-based donations. Under this notice, employees may donate their unused vacation, sick, or personal days in exchange for having their employer make a cash payment, equal to the value of the donated leave, to a qualified tax-exempt organization that provides relief for victims of the outbreaks in the aforementioned countries. Under this special relief, any donated leave isn't included in the employee's taxable income or wages. Furthermore, employers will be able to deduct the amount of the cash payment. The second item of guidance, Notice 2014-65, declares the outbreaks in these three countries to be "qualified disasters." This classification offers tax relief to the recipients of qualified relief payments related to these outbreaks. It allows those recipients to exclude any relief payments received from income on their tax returns. Payments that qualify under this Notice, generally, include amounts to cover necessary personal, family, living, or other qualified expenses that weren't covered by insurance.

interest expense

Interest expense may reduce your tax liability, but deductibility depends on how the proceeds from the debt are used.

INTEREST DEDUCTIBILITY

Your ability to deduct interest payments is subject to many rules and limitations. Deductibility of interest expense depends on how you used the debt proceeds. Before incurring any new debt, you should consider the options available to you to get the best tax result from the interest you will pay on the debt. Also, periodically review your debt to determine whether you can replace debt generating nondeductible interest with other debt so that you can lower your taxes.

Once deductible, there are also rules that categorize whether the interest is deductible against your AGI (also known as “above the line” deductions) or as an itemized deduction. Generally, above the line interest deduction will yield a better tax result. This difference can especially be significant in reducing your state and local income tax bill, since many states do not allow itemized deductions (or severely limit them). Chart 7 summarizes the nature of the different types of interest deductions.

QUALIFIED RESIDENCE

Interest paid on mortgage debt used to acquire or improve your home is deductible as qualified residence interest, subject to limitations. The two types of qualified mortgage debt are:

Acquisition debt

This is debt incurred on the acquisition, construction or substantial improvement of your principal residence and your second home (a so-called vacation home if used for personal purposes). The debt must be secured by the residence and is limited in total to \$1 million (\$500,000 if married filing separately). Acquisition debt also includes debt from a refinancing of an existing acquisition debt, but only up to the principal of that debt at the time of the refinancing plus any proceeds used to substantially improve your residence. A home equity loan that is used to substantially improve your residence qualifies as acquisition debt. Qualified residence interest does not include interest paid on loans from individuals, such as your parents, if your home is not security for the debt and the debt is not recorded at the appropriate government agency (often the county clerk’s office).

chart

7

INTEREST EXPENSE DEDUCTION

Nature Of Debt	Nature of Deduction		
	Not Deductible	Itemized Deduction	Above-the-Line Deduction
Qualified residence (including a second home)		■	
Personal or consumer	■		
Taxable investments		■	
Tax-exempt investments	■		
Trading activities			■
Business activities			■
Passive activities			■
Education loans			■

Note: Other rules may limit your ability to deduct the interest expense in full.

Home equity debt

In addition to acquisition debt, you can deduct mortgage interest on a home equity debt up to \$100,000 (\$50,000 if married filing separately) as long as the debt is secured by a qualified principal residence and does not exceed the equity in your house. Combined with acquisition debt, it allows you to deduct interest on qualifying debt up to \$1,100,000. Interest on home equity debt up to \$100,000 is deductible as qualified mortgage interest regardless of how you use the proceeds (except if used to purchase tax-exempt bonds). However, interest on home equity debt not used to substantially improve your residence is not allowable as a deduction against the AMT thereby effectively increasing your interest rate if you are in the AMT.

Points

Points may be fully deductible in the year paid, or they may be deducted over the life of the loan. In order to be deductible in the year paid, the following are some criteria that must be met:

- Your loan is secured by your principal residence.
- You use the loan to buy or build your principal residence.
- The points were stated as a percentage of the indebtedness.
- The amount is clearly shown in closing statement as points.

If the loan is to refinance your principal residence or a second home, points must be deducted over the life of the loan. If the loan is paid off early, you may deduct any points not already deducted in the year in which the loan is paid off.

For 2014, the benefit of the mortgage interest deduction may be reduced due to the itemized deduction limitation that applies when AGI exceeds \$254,200 (\$305,050 for joint filers). Your itemized deduction limitation will be the lesser of (a) 3% of the AGI above the applicable amount, or (b) 80% of the amount of the itemized deductions. The 2015 threshold amounts are \$309,900 for married couples filing jointly, \$284,050 for head of household, \$258,250 for single filers, and \$154,950 for married individuals filing a separate return.

PERSONAL OR CONSUMER DEBT

Interest expense from personal (or consumer) interest expense is nondeductible. This type of debt includes interest paid on debt used to pay personal expenses, buy consumer goods (including cars), or satisfy tax liabilities. The simplest way to convert this nondeductible interest into deductible interest is to take out a home equity loan to pay off your personal debt. Remember, you can use up to \$100,000 of home equity debt for any purpose,

tax tip

19

CONVERT NONDEDUCTIBLE DEBT INTO DEDUCTIBLE MARGIN DEBT

You can reduce or eliminate your personal debt by converting it into deductible margin debt. Rather than using the proceeds from the sale of securities to buy other securities, use the proceeds to pay off your personal debt. You can then use margin debt, to the extent available, to buy new securities. Your total debt and your total stock portfolio remain the same, but you will have converted nondeductible interest into deductible investment interest (assuming no other limitations apply). And the interest rate on margin debt is typically lower than the rate on consumer debt.

Caution: *Keep loan proceeds totally separate from other funds whenever possible. This can avoid reallocation by the IRS, and may save important tax deductions.*

including paying off personal and credit card debt. In addition to making the interest deductible, you'll benefit from the generally lower interest rate on this type of debt. If you have already utilized your home equity line, see Tax Tip 19 for a method to convert personal debt into investment debt.

If you have interest expense arising from a passive activity that is being limited because you have excess passive losses, consider replacing this debt with home equity debt or investment debt in the same manner as discussed in Tax Tip 19.

INVESTMENT INTEREST

Investment interest is interest on debt used to buy assets that are held for investment. Margin debt used to buy securities is the most common example of investment debt. Another typical source of investment debt is your pro rata share of investment debt incurred by a pass-through entity (partnership, LLC, or S corporation). The investment interest expense on this debt is treated in the same manner as if you personally paid the interest.

Interest on debt used to buy securities which generate tax-exempt income, such as municipal bonds, is not tax-deductible. But be careful, since this rule can reach further than you would expect. As Tax Tip 20 illustrates, you are required to allocate interest expense to the tax-exempt income, rendering a portion of the interest expense as non-deductible.

Investment interest expense is only deductible up to the amount of your net investment income. Generally, this includes taxable

interest, non-qualifying dividends (as discussed below) and net short-term capital gains (but not net long-term capital gains). Your investment income is reduced by deductible investment expenses (other than interest) directly connected with the production of investment income (e.g., investment advisory fees) but only to the extent they exceed 2% of your AGI. If you are in the AMT, your net investment income will generally be higher because it does not get reduced by investment expenses since you did not receive a tax benefit for these deductions. As a result, your deductible investment interest can be greater for AMT purposes. Any disallowed interest for the regular tax or AMT is carried forward and can be deducted in a later year, to the extent that there is adequate net investment income.

For 2014, qualified dividend income that is eligible for the 15% (20% if AGI exceeds \$406,750 for single filers, \$228,800 for married filed separately, and \$457,600 for married filed jointly) preferential tax rate is not treated as investment income for purposes of the investment interest expense limitation. However, dividends not qualifying for this rate, including dividends received from money market mutual funds and bonds funds, are subject to ordinary income tax rates and therefore qualify as investment income.

If you have an investment interest expense limitation, an election is available to allow you to treat any portion of your net long-term capital gains and qualifying dividend income as investment income. Generally, this election should only be used if you do not expect to be able to utilize any of the investment interest carryover in the near future. This election can increase the amount of investment interest expense that you can deduct in the current year. By making this election, you lose the favorable lower capital gains and qualified dividend tax rate of 15% or 20%, but you get to reduce your taxable income by the increased investment interest expense you deduct at the higher ordinary income tax rates.

As an example, assume in 2014 you are subject to the maximum tax rate of 39.6% and you have \$100,000 of investment interest expense in excess of your net investment income. You also have net long-term capital gains of \$500,000. By electing to treat \$100,000 of the \$500,000 long-term capital gains as ordinary income, you pay an extra \$19,600 of tax on the capital gains (\$100,000 of elected gains taxed at 39.6% rather than 20%). However, you save \$39,600 of tax since your taxable income is lower by the additional investment interest expense (\$100,000 at 39.6%). Therefore, your net tax drops by \$20,000. Plus, you will save state taxes if your state of residency allows you to reduce your income by all, or some, of your itemized deductions.

Additionally, the investment interest expense deduction can help reduce the 3.8% Medicare Contribution Tax on net investment income.

ABOVE-THE-LINE DEDUCTIONS

Interest expense deductible “above-the-line” against your AGI gives you a greater tax benefit than interest treated as an itemized deduction. This is because the interest expense reduces your AGI, which in turn reduces the 2% phase-out of your miscellaneous itemized deductions, and, if applicable, the limitation on deductible medical expenses, charitable deductions and other items affected by AGI. For 2014 and beyond, it will also impact the overall limitation on your itemized deductions and personal exemptions. But even more beneficial for most taxpayers is that the interest will be deductible against your state income, rather than nondeductible if you live in a state that does not allow itemized deductions (such as Connecticut, Pennsylvania and New Jersey), or limited in a state that disallows a portion of your itemized deductions (such as New York and California).

Interest expense eligible for this favorable treatment includes:

Trading interest

This is interest incurred on borrowings against taxable securities if you are actively engaged in the business of trading personal property (securities), rather than simply as an investor. This interest commonly passes through a trading partnership or LLC. The interest will be classified as trading interest to you even if you have no involvement in the management of the entity, so long as the entity meets the tests for actively engaging in the business of trading personal property. However, in such a case, the trading interest is still subject to the investment interest expense limitation discussed above.

tax tip

20

**INDIRECT TAX-EXEMPT
DEBT CAN LIMIT YOUR
DEDUCTIBLE INTEREST**

It is common to have one investment account that holds mostly tax-exempt municipal bonds and a separate account that holds mostly taxable investments (such as stock in publicly traded companies). Assume that you want to use your available margin in the account holding taxable investments to purchase additional stock. Even though you are not using margin in your tax-exempt account, your interest deduction will be limited because of an IRS ruling that requires you to allocate a portion of the debt to your tax-exempt holdings based on the ratio of your tax-exempt investments to your total investments. This ruling was designed to prevent a taxpayer from reaping a double tax benefit, and thus treats your accounts as one account and deems you to have indirectly borrowed some of the debt to maintain your tax-exempt account. Therefore, before you borrow against your securities, consider the real after-tax cost of the interest you will be paying.

Business interest

This is interest on debt traced to your business expenditures, including debt used to finance the capital requirements of a partnership, S corporation, or LLC involved in a trade or business in which you materially participate. This also includes items that you purchase for your business (as an owner) using your credit card. These purchases are treated as additional loans to the business, subject to tracing rules that allow you to deduct the portion of the finance charges that relate to the business items purchased.

Interest on education loans

A qualified education loan is any debt incurred solely to pay the qualified higher education expenses of the taxpayer, the taxpayer's spouse, or an individual who was the taxpayer's dependent at the time the debt was incurred.

For 2014, the maximum deductible amount for educational loan interest is \$2,500. The student loan interest begins to phase-out for taxpayers whose MAGI exceeds \$65,000 (\$130,000 for joint returns) and is completely eliminated when MAGI is \$80,000 (\$160,000 for joint returns).

Passive activity interest expense

Passive interest expense is interest on debt incurred to fund passive activity expenditures, whether paid by you directly or indirectly through the capital requirements of a pass-through business entity. The interest is an additional deduction against the income or loss of the activity, thereby deductible against AGI. However, since the interest expense becomes part of your overall passive activity income or loss, it is subject to the passive activity loss limitations. See the chapter on passive and real estate activities.

retirement plans

Contributing to retirement plans can provide you with financial security as well as reducing and/or deferring your taxes. However, there are complex rules that govern the type of plans available to you, the amount you can contribute, whether contributions need to benefit your employees, and the requirements for taking funds out of the plan. Failure to adhere to these rules can have severe adverse tax consequences.

RETIREMENT PLAN BENEFITS

Retirement plans (other than Roth IRAs and plans offering Roth 401(k) plans) offer these tax saving advantages:

- Your contributions grow tax-deferred until withdrawn.
- Your contributions are tax deductible, thereby reducing your current year's taxes.

Roth IRAs and Roth 401(k) plans offer different tax savings opportunities by providing for tax-free growth and withdrawals in the future, but there is no current-year tax deduction for your contributions.

chart

8

RETIREMENT PLANS

Retirement plans available to self-employed individuals include:

- Simplified Employee Pension (SEP) Plans
- SIMPLE IRA or SIMPLE 401(k) Plans
- Defined Contribution Plans including 401(k)
- Defined Benefit Plans

Employer-sponsored salary deferral plans available to employees include:

- 401(k) Plans
- 403(b) Plans for Employees of Public Schools or Tax-Exempt Educational, Charitable and Religious Organizations
- 457(b) Plans for Employees of Government Organizations
- SIMPLE Plans for Companies with 100 or Fewer Employees

Individual Retirement Accounts (IRAs) available to all individuals, subject to income limitations:

- Roth
- Traditional
- Education

AVAILABLE RETIREMENT PLANS

There are many different types of retirement plans available with different contribution and distribution rules. The specific plan(s) you can contribute to depends on a variety of factors, including your income, whether you are an employee or self-employed, and whether or not you contribute to or participate in other retirement plans.

Self-employed individuals have more flexibility to choose plans to maximize contributions. Employees are more limited since they will have to make contributions based on the type of plan their employer offers, but may gain the advantage of having their employer match some or all of their contributions. Employees may also be eligible to make contributions to other plans in addition to the ones offered by their employer, if they have earned income from a self-employment activity (such as consulting or directors' fees). Whether owners or employees, individuals and their spouses may also be eligible to contribute to a traditional or Roth IRA.

Chart 8 shows the different types of retirement plans that you may be eligible to participate in. Chart 9 shows the maximum annual contributions that you can make for 2014 and 2015.

Special Note — IRS Uniform Policy Regarding Same-Sex Spouses — Impact on Retirement Plans

The IRS issued Revenue Ruling 2013-17 on August 29, 2013 in response to the Supreme Court decision striking down section 3 of the Defense of Marriage Act ("DOMA"). The ruling establishes a uniform policy for the recognition of same-sex spouses for federal tax purposes, which includes qualified retirement plans.

Under the ruling, same-sex couples are lawfully married for federal tax purposes when the couple was married in a state or foreign jurisdiction whose laws authorize the marriage of two individuals of the same sex even if the couple currently or subsequently resides in a state or foreign jurisdiction that does not recognize the validity of same-sex marriages.

Impact on Qualified Retirement Plans

Effective September 16, 2013, qualified retirement plans must comply with the following rules:

1. A qualified plan must treat a same-sex spouse as a spouse for all purposes of satisfying federal tax law relating to qualified retirement plans if a same-sex marriage was validly entered into in a jurisdiction whose laws authorize the marriage even if the married couple lives in a domestic or foreign jurisdiction that does not recognize the validity of same-sex marriages.

2. A person who is in a registered domestic partnership or civil union is not considered to be a spouse for purposes of applying the federal tax law requirements relating to qualified retirement plans, regardless of whether that person's partner is of the same or opposite sex.

Examples

The following examples of the application of this policy were provided by the IRS:

1. Plan A, a qualified defined benefit plan, is maintained by Employer X, which operates only in a state that does not recognize same-sex marriages. Nonetheless, Plan A must treat a participant who is legally married to a spouse of the same sex under the laws of a different jurisdiction as married for purposes of applying the qualification requirements related to spouses.
2. Plan B is a qualified defined contribution plan (401(k), profit sharing, 403(b), etc.) and provides that the participant's account must be paid to the participant's spouse upon the

participant's death unless the spouse consents to a different beneficiary. Plan B does not provide for annuity forms of distribution. Plan B must pay this death benefit to the same-sex surviving spouse of any deceased participant. Plan B is not required to provide this death benefit to a deceased participant's surviving registered domestic partner. However, Plan B is allowed to make a participant's registered domestic partner the default beneficiary who will receive the death benefit unless the participant chooses a different beneficiary.

Note: *The consent of the domestic registered partner is not required in this case in order for the participant to choose a different beneficiary.*

Impact on other Retirement Arrangements

Revenue Ruling 2013-17 does not explicitly state that these rules also apply to SEPs, SIMPLE IRAs, etc. However, in Q&A 19 of the frequently asked questions provided by IRS along with the ruling, the IRS indicated that it "intends to issue further guidance on how qualified retirement plans and other tax-favored retirement arrangements must comply with *Windsor* and Revenue Ruling

chart

9

RETIREMENT PLAN MAXIMUM ANNUAL CONTRIBUTION LIMITS

Type of Plan	Maximum Annual Contribution	
	2014	2015
401(k), 403(b), salary deferrals	\$ 17,500	\$ 18,000
Defined-contribution plan including salary deferral amounts above	52,000	53,000
Defined-benefit plan*	210,000	210,000
Traditional and Roth IRAs	5,500	5,500
SEP Plans	52,000	53,000
457(b) salary deferrals to state and local government and tax-exempt organization plans	17,500	18,000
SIMPLE plans (Savings incentive match plan for employees)	12,000	12,500
Catch-up contributions for individuals age 50 or older		
■ 401(k), 403(b) and 457(b) plans	5,500	6,000
■ Traditional and Roth IRAs	1,000	1,000
■ SIMPLEs	2,500	3,000

* This is the maximum annual benefit that can be provided for by the plan, based on actuarial computations.

2013-17.” We expect that these rules may be applied to all these types of plans given that they are tax-favored to the participants, the employer, or both.

SIMPLIFIED EMPLOYEE PENSION PLAN

A SEP plan allows you, in your capacity as employer, to make contributions to your own IRA and to eligible employees’ IRAs. If you do not have employees, the plan is a single participant plan for your benefit. If you have eligible employees, you must also make contributions on their behalf. The maximum allowable annual contribution to a SEP is \$52,000 for 2014 (\$53,000 in 2015). However, the contribution on behalf of a self-employed individual cannot exceed 25% of his or her eligible compensation (net of the deduction for the contribution). The contribution limit for common law employees covered by a SEP is the lesser of 100% of their eligible compensation or \$52,000 for 2014 (\$53,000 in 2015).

There are several advantages of a SEP compared to a qualified defined contribution plan (e.g., a profit-sharing plan). Unlike a defined contribution plan, which must be established by December 31, a SEP plan can be set up any time prior to the due date of the tax return for the current year of the sponsoring entity (including extensions as late as October 15) and you can still deduct contributions on your prior year’s tax return, even though made in the next year. Another advantage is that SEPs do not require the same documentation as defined contribution plans, nor is IRS Form 5500 required to be filed annually.

QUALIFIED DEFINED CONTRIBUTION AND BENEFIT PLANS

A qualified defined contribution plan can be a profit-sharing plan, a money purchase pension plan, or a target benefit pension plan.

The maximum contribution to a defined contribution plan for each employee is the lesser of \$52,000 in 2014 (\$53,000 in 2015) or 100% of his or her compensation. For self-employed individuals, the maximum contribution will generally be limited in the same manner as for SEPs unless 401(k) provisions are included in the plan.

A qualified defined benefit plan sets a future annual pension benefit and then actuarially calculates the contributions needed to attain that benefit. Because the plan is actuarially driven, the annual contribution may exceed those allowable for other types of plans, and is based on the employee’s age, average annual income and annual desired benefit (limited to the maximum allowable annual benefit). The maximum allowable annual benefit is the lesser of \$210,000 in 2014 (\$210,000 in 2015) or 100% of earned income.

chart

10

UNIFORM LIFE TABLE

If you are either unmarried, or married, but your spouse is either not the sole beneficiary or is not more than 10 years younger than yourself, you can compute your required minimum distribution by using this table. Assuming you are 73 years old and your qualified retirement plans, in the aggregate, were valued at \$2,000,000 at the end of 2014, you would be required to take a minimum distribution of \$80,972 in 2015 (\$2,000,000 divided by a distribution period of 24.7).

Age	Distribution Period	Age	Distribution Period
70	27.4	85	14.8
71	26.5	86	14.1
72	25.6	87	13.4
73	24.7	88	12.7
74	23.8	89	12.0
75	22.9	90	11.4
76	22.0	91	10.8
77	21.2	92	10.2
78	20.3	93	9.6
79	19.5	94	9.1
80	18.7	95	8.6
81	17.9	96	8.1
82	17.1	97	7.6
83	16.3	98	7.1
84	15.5	99	6.7

Whether you choose a defined contribution or a defined benefit plan, your plan must be in place by December 31 of the year for which you want to make tax deductible contributions to the plan. As long as the plan is in existence on that date, you can make tax deductible plan contributions to a defined contribution plan as late as the due date of that year's income tax return, including extensions (as late as October 15, or September 15 for sole proprietors, partnerships, LLCs or corporations). For calendar year-defined benefit plans, contributions must be made by September 15, regardless of an extension to file until October 15.

In-Plan Roth conversions

The Small Business Jobs Tax Relief Act of 2010 included two retirement plan provisions. The first provides a special Roth conversion opportunity that a plan sponsor may (but is not required to) offer to plan participants under its 401(k) or 403(b) plan. The second provision allows governmental 457(b) plans to offer a Roth feature and the Roth conversion feature.

Employees can elect under certain conditions to convert some or all of certain amounts that were contributed to a plan on a pre-tax basis into a Roth after-tax account inside of the plan. This is known as an "in-plan" Roth conversion. Both 401(k) plans and 403(b) plans may permit such a conversion, but the plan documents must provide for the in-plan conversion.

ATRA further expanded this provision by lifting conditions which essentially allow an in-plan conversion for all plan participants.

There is no recharacterization option for an in-plan Roth conversion, so once a conversion is made it is irrevocable.

Application to plans and participants

Any current or former plan participant who has an account balance in the plan and who is eligible to receive an eligible rollover distribution ("ERD") can make the Roth conversion election. The election is available to surviving spouses, but not non-spouse beneficiaries. There is no income limit or filing status restriction for this election. The conversion may be applied to any type of vested contributions (and earnings thereon) that are currently distributable and would be treated as an ERD. Contribution types that would be eligible for conversion are: pre-tax 401(k), 403(b), and 457(b) deferrals, matching contributions, and profit sharing contributions. In addition, certain after-tax contributions may be rolled over to an in-plan Roth account.

SALARY DEFERRAL PLANS (401(k), 403(b) AND 457(b) PLANS)

A 401(k) plan is a profit sharing plan that allows participants to elect to have a portion of their compensation contributed to the plan. The maximum employee elective contribution that can be made for 2014 is \$17,500 and for 2015 is \$18,000, (\$23,000 and \$23,500 respectively for taxpayers age 50 and over). This annual limit applies to your total contributions even if you have more than one employer or salary deferral plan.

Similar provisions apply for 403(b) and 457(b) plans.

SIMPLE PLANS

An employer that had no more than 100 employees who earned \$5,000 or more of compensation in the preceding year, can establish a SIMPLE plan as long as the employer doesn't maintain any other employer-sponsored retirement plan. A SIMPLE plan can take the form of an IRA or a 401(k) plan. Both plans allow employees to contribute up to \$12,000 for 2014 and \$12,500 for 2015 (\$14,500 and \$15,500 respectively for taxpayers age 50 and over) with the employer generally required to match employee contributions at a maximum of 3% of the employee's compensation. For a SIMPLE IRA, the employer may choose to reduce the matching contribution to less than 3% but no less than 1% in two out of every five years.

Caveat: *The benefit of a SIMPLE plan is that it is not subject to non-discrimination and other qualification rules, including the top-heavy rules, which are generally applicable to qualified plans. The downside is that you cannot contribute to any other employer-sponsored retirement plan and the elective contribution limit is lower than for other types of plans. For the employee, the mandatory employer matching requirement can be attractive, though limited. For the employer, the contributions are not discretionary.*

INDIVIDUAL RETIREMENT ACCOUNTS (IRAs)

The two most common types of IRAs are Roth IRAs and traditional IRAs. While there are significant differences between these IRAs, there are also common rules that apply to both of them. You can contribute up to \$5,500 for 2014 and 2015 (\$6,500 if at least age 50 in 2014 or 2015) to either IRA account, or both combined. To be deductible as a contribution for a traditional IRA (Roth contributions are not tax deductible) in the current year, you must make the contribution on or before April 15 of the following year. An extension to file your tax return does not extend this date. To be eligible to contribute to either IRA, you must have earned income equal to or greater than the IRA contribution amount. Taxable alimony is considered earned income for IRA purposes.

TRADITIONAL IRA: CURRENT TAX DEDUCTION

A traditional IRA allows a current tax deduction for your contributions and the earnings grow tax-deferred. The contributions lower your current year's taxes, but future distributions will be fully taxable as ordinary income, subject to ordinary income tax rates at the time of distribution. Also, once you reach age 70 1/2, you can no longer make contributions in that year or future years. You can only make tax deductible contributions to a traditional IRA if you (or your spouse, if married) do not actively participate in an employer-sponsored retirement plan for any part of the year. However, you can still make contributions to an employer-sponsored plan and deduct your own IRA contributions if you meet one of these exceptions:

- You are single and your MAGI doesn't exceed \$60,000 in 2014 (\$61,000 in 2015). A partially deductible IRA contribution is allowed until your MAGI reaches \$70,000 in 2014 (\$71,000 in 2015).
- You are married, but only one of you actively participates in an employer-sponsored plan and your combined MAGI doesn't exceed \$181,000 in 2014 (\$183,000 in 2015). Only the non-active participant can make a deductible IRA contribution. A partially deductible contribution can be made until the combined MAGI reaches \$191,000 in 2014 (\$193,000 in 2015).
- Both you and your spouse (if filing jointly) participate in employer-sponsored plans, but your combined MAGI does not exceed \$96,000 in 2014 (\$98,000 in 2015). You can make a partially deductible IRA contribution until your MAGI reaches \$116,000 in 2014 (\$118,000 in 2015).
- You can always make a nondeductible contribution irrespective of the income limitations or participation in an employer-sponsored plan up until the year you attain age 70 1/2.

ROTH IRA: NO TAXES ON DISTRIBUTIONS

A Roth IRA differs from a traditional IRA primarily because your contributions are made on an after-tax basis, but your withdrawals are generally tax free. A Roth IRA offers these advantages over a traditional IRA:

- You never pay any income tax on the earnings if you take only qualified distributions. To qualify as a tax-free distribution, the Roth IRA must have been opened more than five years ago and the distribution must be made after age 59 1/2 (with a few exceptions).

- Distributions before reaching age 59 1/2 (and other nonqualified distributions) are first treated as a nontaxable return of your contributions. To the extent these distributions do not exceed your contributions, they are not taxed. This gives you more flexibility to withdraw funds to cover financial emergencies. However, amounts that exceed your accumulated contributions are subject to regular income tax, plus an additional 10% penalty as nonqualified distributions.
- Original account owners and their spouses who are designated beneficiaries are not required to take distributions beginning at age 70 1/2 — or ever.
- Your contributions can continue to be made to the plan after you reach age 70 1/2, as long as you have sufficient earned income and/or alimony.
- Contributions to a Roth IRA can be made even if your MAGI is too high for a traditional IRA or you are covered by an employer-sponsored plan. The AGI limits for making Roth IRA contributions are \$181,000 in 2014 (\$183,000 in 2015) if you are married filing jointly, or \$114,000 in 2014 (\$116,000 in 2015) if you are single or head of household (with partial contributions permitted until your AGI reaches \$191,000 in 2014 (\$193,000 in 2015), if married filing jointly and \$129,000 in 2014 (\$131,000 in 2015) if single or head of household).

If you already have a traditional IRA in place, you may want to consider rolling part or all of the balance into a Roth IRA. The advantage of this rollover is that you convert tax-deferred future growth into tax-free growth. The disadvantage is that the amount of the rollover from the traditional IRA is taxable, as if you received the distribution. Before you roll over anything, evaluate the potential benefit of the tax-free growth compared to the lost earnings on the tax you pay because of the rollover.

- **Who should make a conversion to a Roth IRA?** Those individuals who have many years to go before retirement and who should be able to recover the tax dollars lost on the conversion may benefit from a conversion. Others who may benefit are those who anticipate being in a higher tax bracket in the future and those able to pay the tax on the conversion from non-retirement account assets.
- **What are some planning ideas for high-income taxpayers?** High-income individuals can make nondeductible contributions to a traditional IRA this year and in future years so that the amounts can be converted to Roth IRAs.

REQUIRED MINIMUM DISTRIBUTION (“RMD”) RULES

Special Note: *If a decedent did not take an RMD in 2009 as permitted under the Worker, Retiree, and Employer Recovery Act of 2008, then for beneficiaries who are otherwise required to take RMDs using the five-year rule, the five-year period under that rule is determined without regard to calendar year 2009. Thus, for example, for an account with respect to an individual who died in 2009, the five-year period ends in 2015, instead of 2014. The five-year rule, generally, will apply to non-spouse beneficiaries of a qualified retirement plan account who either elect or are required by the terms of the plan document to take a complete distribution of the decedent’s account before the end of the calendar year that contains the fifth anniversary of the decedent’s death. In certain circumstances, this rule also applies to IRAs that are inherited by a spouse as sole beneficiary. See the following section on non-spouse distribution rules.*

You must generally start taking RMDs from your qualified retirement plan or traditional IRA by April 1 of the year following the year in which you reach age 70 ½. For each year thereafter, the RMD amount must be taken by December 31 of that year. If you are a participant in a qualified retirement plan of your current employer, you should refer to the plan document or consult with your employer regarding when you must begin receiving RMDs from the plan as some plans do not require you to take RMDs until you terminate your employment even if you have already reached age 70 ½ before leaving your employer. For example, if you own 5% or less of the employer and are still employed by the employer at 70 ½, the plan document may allow you to defer taking distributions from the plan until you actually retire. This exception does not apply to SEPs or SIMPLE IRAs.

Generally, if you fail to take an RMD from your qualified retirement plan or traditional IRA after you reach 70 ½, you are subject to a 50% penalty on the shortfall. If you are subject to the penalty, you do not have to take a catch-up distribution since the penalty effectively covers the income tax that you would have had to pay on the distribution, as well as a penalty.

If you turned or will turn 70 ½ during the year, you can either take a distribution in that year or defer the distribution until the following year. If you elect to defer, you must take two distributions the following year (the first by April 1 and the second by December 31).

The RMD is computed by taking the aggregate value of all your qualified retirement plans at December 31 of the prior year and dividing that sum by a distribution period determined by the IRS. There are two tables for determining the distribution period. One is called the Uniform Lifetime Table and is used by unmarried individuals, or a married individual if the individual’s spouse is either not the sole beneficiary or is not more than ten years younger than

the individual. The other table is the Joint Life and Last Survivor Expectancy Table and is used when the spouse is the sole beneficiary and is more than ten years younger than the individual. The Uniform Lifetime Table, the more commonly used table, is reproduced in Chart 10 with an example of how to compute your RMD.

AVOID EARLY WITHDRAWAL PENALTIES

Generally, withdrawals from employer-sponsored qualified plans and IRA accounts are taxed at your ordinary income tax rate. If taken before reaching age 59 ½, you are also subject to a 10% early withdrawal penalty unless you meet one of the following exceptions:

- You take distributions because of job separation (such as early retirement) and you are at least 55 years old at the time you terminate your employment with the employer.

Note: *This exception does not apply to IRA accounts.*

- You receive distributions under a qualified domestic relations order (pertaining to a court-ordered separation or divorce).
- You have a qualifying disability.
- You are the beneficiary on the account of a deceased participant.
- You use distributions for medical expenses, limited to the amount not otherwise deductible.
- You take distributions in the form of substantially equal periodic or annuity payments for a period of at least five years and the last payment is received in a year after you reach age 59 ½.
- You use the distribution to make a first-time home purchase (limited to \$10,000).
- You use the distribution to pay for qualified higher education expenses for you, your spouse, your children or your grandchildren.

DISTRIBUTIONS BETWEEN AGE 59 ½ AND 70 ½

Even though you are not required to take distributions between the ages of 59 ½ and 70 ½, you may need to take them to meet expenses or you may want to take them if your tax bracket is low. Though you are not subject to the early withdrawal penalties, the distributions are taxable in the year withdrawn. If you take distributions to take advantage of a low tax bracket, make sure you

compare the benefit of the reduced rate against the loss of the tax-deferred growth had the funds been left in the retirement account.

LUMP-SUM (OR OTHER ELIGIBLE) DISTRIBUTIONS

Amounts distributed from a qualified retirement plan can be rolled over tax-free into an IRA or another qualified plan as long as the transfer is done directly from trustee to trustee. If you personally receive the funds, 20% of the distribution is required to be withheld for federal income taxes (some states also require state income tax withholding). If you fail to roll over the full amount of the distribution (before any withholding tax) within 60 days to another IRA or qualified retirement plan, you will also be subject to income tax and possibly early withdrawal penalties on the distribution if you are under age 59 1/2.

Special Planning Note: *Distributions from qualified plans that are not made from a designated Roth account may be rolled over directly to a Roth IRA. Under these rules, you will be required to pay income taxes in the year of the distribution, but will not be subject to the mandatory 20% tax withholding or the 10% early distribution penalty if you are younger than age 59 1/2. Previously, only distributions from designated Roth accounts of qualified plans could be directly rolled over to a Roth IRA without being subject to the income limitation.*

SURVIVING SPOUSE DISTRIBUTION RULES

Upon the death of a participant/owner of a qualified retirement plan or IRA, a surviving spouse can make an eligible rollover distribution into his or her own plan or IRA. Distributions from the surviving spouse's plan or IRA would not be required until he or she reached age 70 1/2. At that time, the RMD rules discussed above would apply.

NONSPOUSE BENEFICIARIES

If allowed under the terms of the plan document, distributions from a deceased participant's qualified retirement plan are permitted to be rolled over into an IRA for a beneficiary who is not the decedent's spouse, such as a child of the deceased. The rollover must be in the form of a direct trustee-to-trustee transfer to an IRA for the benefit of the beneficiary. The IRA is treated as an inherited IRA so the beneficiary will not have the ability to roll over the IRA to another IRA in the future. However, the beneficiary will now be allowed to take funds out of the inherited IRA over his or her life expectancy, beginning in the year after the decedent's death, rather than fully within five years (as noted below).

If the plan document governing your plan does not provide for non-spouse rollovers to an inherited IRA, then non-spouse beneficiaries such as children of the deceased are not eligible to roll over a decedent's qualified plan balance into their own plan or IRA. They must take distributions based on the minimum distribution method used by the decedent if he or she had already reached 70 1/2, or within five years after the decedent's death if the decedent had not yet begun taking required minimum distributions.

A non-spouse beneficiary of a decedent's IRA will have to commence taking RMDs beginning in the year following the year of the IRA account holder's death based on the life expectancy of the oldest beneficiary (if more than one primary beneficiary is named). This is true whether the IRA account holder was already taking RMDs or died before his or her required beginning date. Alternatively, if the IRA account holder died before his or her required beginning date, the beneficiary(ies) have the option of still using the five-year rule, which does not require any distributions from the account until the year containing the fifth anniversary of the IRA account holder's death. However, in that year, the entire account must be distributed.

estate and gift tax planning

On January 1, 2013, Congress enacted ATRA. This law created certainty and provides for planning opportunities to reduce tax cost of transferring your assets to your beneficiaries.

The 2013 Supreme Court ruling on DOMA in *United States v. Windsor* led to the reduction of the estate and gift tax burden for legally married same-sex couples. Based on this ruling, the Internal Revenue Service issued guidance that, effective September 16, 2013, same-sex married couples are treated as married for all federal tax purposes, regardless of where they live.

ESTATE, GIFT AND GENERATION-SKIPPING TAXES

Background

The Economic Growth and Tax Relief Reconciliation Act of 2001 ("EGTRRA") provided, among other provisions, a phased reduction in the maximum rate of estate and generation-skipping taxes during the years 2002 through 2009, elimination of these taxes for 2010, and a reinstatement of these taxes after 2010 at the tax rates (and with the exclusions) in effect in 2001. Almost everybody believed that Congress would act to either permanently repeal the estate and generation-skipping taxes or, more likely, enact a modified regime for these taxes to begin in 2010 (or earlier).

In December 2010, Congress enacted the 2010 Tax Relief Act — a temporary, two-year reprieve from the sunset provisions of EGTRRA. This Act extended and modified the federal estate, gift, and generation-skipping tax provisions through December 31, 2012. These provisions allowed estates of married couples whose assets were \$10 million or less to avoid federal transfer taxes in 2011. For 2012, an inflation adjustment made this \$5.12 million per person (\$10.24 million for a married couple).

On January 1, 2013, the final compromise was reached and ATRA permanently extended and modified federal estate, gift, and generation-skipping tax provisions. For 2013 and 2014, due to inflation adjustment, the exclusion amount increased to \$5.25 million per person (or \$10.5 million per couple), and \$5.34 million (or \$10.68 million per couple), respectively. For 2015, the exclusion has been increased to \$5.43 million per person or \$10.86 million per couple.

As a result of ATRA, the \$5 million exclusion, adjusted for inflation, has been made permanent with a maximum tax rate of 40%. This rate was a compromise between 35% and 55% marginal tax rates of previously enacted estate and gift tax provisions.

For estates in excess of exclusion amounts, there are still opportunities to decrease tax cost of transferring assets to beneficiaries.

Where do you begin?

Estate planning will help you to maximize the wealth that can be transferred to your beneficiaries.

Here are some effective strategies that you should consider to reduce the eventual estate tax on your assets:

chart

11

MAXIMUM GIFT, ESTATE, AND GST TAX RATES AND EXEMPTIONS

The following chart shows the rates and exemptions for the tax years 2010 through 2015 and thereafter:

Year	Maximum Rates	Exemptions (Cumulative Tax-Free Transfers)			State Tax Credit
	Gift, Estate and GST Tax	Gift	Estate	GST	
2010*	35%	\$1,000,000	\$5,000,000	\$5,000,000	NO
2011	35%	\$5,000,000	\$5,000,000	\$5,000,000	NO
2012	35%	\$5,120,000	\$5,120,000	\$5,120,000	NO
2013	40%	\$5,250,000	\$5,250,000	\$5,250,000	NO
2014	40%	\$5,340,000	\$5,340,000	\$5,340,000	NO
2015 and thereafter**	40%	\$5,430,000	\$5,430,000	\$5,430,000	NO

*Unless carryover basis and no estate tax is chosen.

**Adjusted for inflation for later years.

Make annual gifts

For 2014, the annual gift exclusion allows you to make tax-free gifts up to \$14,000 per individual (or \$28,000 if you are married). The annual gift exclusion remains at \$14,000 for 2015. By making gifts annually to any number of your relatives or friends, you could end up transferring substantial amounts out of your estate without using any of your lifetime gift tax exclusion.

Use your lifetime exclusion

Also consider utilizing your lifetime gift tax exclusion of \$5 million (adjusted each year for inflation and for any exclusion previously utilized). If married, this gives you and your spouse the ability to transfer up to \$10 million (adjusted annually for inflation) tax-free during your lifetimes. This is in addition to your annual gift exclusions mentioned previously. See Chart 11 for the rates and exemptions for 2010 through 2015. Also, see Tax Tip 21.

Consider portability of the lifetime exclusion

Prior to the 2010 Tax Relief Act, married couples had to do careful planning and maintain separately owned assets in order to exclude \$7 million (each had a \$3.5 million estate tax exclusion) of their assets from federal transfer taxes imposed on their estates after both died. Commencing in 2011, married couples can easily exclude \$10 million (\$10.68 million for 2014 and 10.86 million for 2015) of their assets from federal transfer taxes. This is accomplished by a concept known as “portability.”

The executors of estates of decedents dying on or after January 1, 2011 may elect to transfer any unused exclusion to the surviving spouse. The amount received by the surviving spouse is called the Deceased Spousal Unused Exclusion (“DSUE”) amount. If the executor of the decedent’s estate elects transfer, or portability, of the DSUE amount, the surviving spouse can apply the DSUE amount received from the estate of his or her last-deceased spouse against any tax liability arising from subsequent lifetime gifts and transfers at death.

As an example, assume that one spouse dies in calendar year 2015 with a taxable estate of \$8 million and leaves it all outright to the surviving spouse (who has \$4 million of his or her own assets). No federal estate tax would be due from the estate of the first to die because the surviving spouse receives all of the assets and there is an unlimited marital deduction, and none of the deceased spouse’s \$5.43 million exclusion would be used. If the deceased spouse’s executor elects to transfer the unused \$5.43 million to the surviving spouse, his or her estate will have a \$10.86 million exclusion (disregarding the inflation indexing) from federal transfer taxes. If the surviving spouse has \$12 million of assets on his or her death, only \$1.14 million will be subject to the federal estate tax (assuming the surviving spouse dies prior to January 1, 2016). As a result of ATRA, portability has been made permanent.

tax tip

21

USE YOUR LIFETIME GIFT TAX EXCLUSION NOW

You should consider using your lifetime gift tax exclusion immediately if you haven’t already done so. Otherwise, the transferred assets may remain in your estate with all future income and appreciation thereon subject to estate tax, either at your death, or, if married, typically at your surviving spouse’s death. As a result of ATRA, if you and your spouse have not yet used your exclusions, you can make gifts of \$10.68 million in 2014 or \$10.86 million in 2015 (in addition to the annual exclusion gifts of \$14,000 to each donee from each of you).

The benefit of utilizing your lifetime gift tax exclusion is as follows (assuming a 5% compounded annually after-tax growth rate):

If you transfer \$10.86 million in 2015, the \$10.86 million will grow to \$28,811,054 in 20 years, which will be available to your beneficiaries free of gift and estate taxes. If the appreciated assets pass to your beneficiaries through your estates, assuming you and your spouse will have a combined estate in excess of the estate tax exclusion at the time of your surviving spouse’s death, the estate tax on the assets that you did not transfer during your lifetime may be as high as \$7,180,422 (\$28,811,054 less the \$10.86 million exclusion still available at an assumed tax rate of 40%). Your beneficiaries will receive the net balance of \$21,630,632, rather than the \$28,811,054 had you transferred the assets now.

Although portability of the exclusion simplifies estate tax planning for many couples, there are still significant advantages to using the exclusion in the estate of the first spouse to die, which often necessitates the creation of a “bypass trust.” These include:

- Removal of future income and appreciation from transfer taxes.
- Protection of the assets from potential creditors.
- Preservation of the assets for children and grandchildren (e.g., in a situation where the surviving spouse remarries).

Make taxable gifts

Although there is a reluctance to pay gift taxes, for those people who have used up their available exclusion and can afford to transfer additional assets, paying gift taxes will often increase the amount available for your beneficiaries. For example, assume that you have previously used your available exclusion amount and you have another \$5 million that you wish to gift. If you have a large estate, assuming the 40% estate tax rate effective for 2015, your

beneficiaries will only receive \$3,000,000. However, if you make a net gift of \$3,571,429, which is the \$5 million amount less gift taxes of \$1,428,571 (at the 40% rate) and survive for three years, your beneficiaries will receive an extra \$571,429 (\$3,571,429 less \$3,000,000). (This example ignores the time value of money.) This difference arises because the estate tax is “tax inclusive,” which means that the tax is on the amount of total assets and not the amount actually going to the heirs. Furthermore, if the grantor survives three years, the taxes are removed from his or her estate.

Gifts to minors

One of the common methods of making gifts to children and grandchildren under the age of 21 is to arrange for ownership of the assets to be held by an individual as custodian for the minor under a state’s Uniform Transfers to Minors Act (“UTMA”). This type of ownership was previously under the Uniform Gifts to Minors Act (“UGMA”). Under the UTMA, the custodian is required to transfer the property to the minor upon the minor attaining age 21, or to the minor’s estate upon the minor’s death before age 21. However, it is possible for the custodianship to terminate at age 18 if the designation of ownership contains, in substance, the phrase “until age eighteen.”

It is important to make sure that the person who gifts the property does not serve as a custodian under the UTMA for the minor with respect to that property. If the donor is serving as a custodian and dies before the UTMA status terminates (e.g., before the minor reaches the age of 21), the property held under the UTMA will be included in the donor’s taxable estate for estate tax purposes. Fortunately, this result can be avoided with proper advance planning. For example, if a spouse transfers his or her property for the benefit of his or her child and his or her spouse serves as custodian under the UTMA, the property would not be included in the deceased spouse’s taxable estate should he or she die before the UTMA status terminates.

Other methods for transferring assets to minors (or for their benefit of) include:

- Section 529 college savings accounts,
- Section 2503(c) trusts for the benefit of persons under 21 years of age,
- Life insurance trusts,

tax tip

22

TRANSFER APPRECIATION WITH A GRAT FREE OF GIFT TAXES

You transfer securities in a company that has great potential to a three-year grantor retained annuity trust (“GRAT”). The securities are currently valued at \$1,000,000 (200,000 shares at \$5 per share). As an example, based on a 2.0% IRS rate (for December 2014) you could set the annuity at 34.81045% to zero out the remainder interest and pay no gift tax on the transfer. You would receive an annuity payment of \$348,105 per year (\$1,000,000 times 34.81045%), totaling \$1,044,315. Assume the stock appreciates to \$8 per share at the end of the first year, \$9 at the end of the second year, and \$10 at the end of the third year. Since the GRAT does not hold any liquid assets, you will need to use the stock to pay your annuity, as follows:

Shares transferred to GRAT	200,000
Shares used to pay annuities:	
Year 1 (\$348,105 divided by \$8 per share)	(43,513)
Year 2 (\$348,105 divided by \$9 per share)	(38,678)
Year 3 (\$348,105 divided by \$10 per share)	(34,811)
Shares remaining at the end of the GRAT’s term	82,998
Value of shares transferred to beneficiaries (\$10 per share)	\$ 829,980

- Discretionary trusts,
- Direct payment of educational and medical expenses to the qualified educational institution or the medical provider, and
- Totten trust (pay-on-death) bank/securities accounts.

Pay medical and education costs

You can directly pay unlimited tuition and medical expenses for any person free of gift taxes. This exclusion is in addition to the annual gift exclusion. Payments can include health insurance premiums and tuition for elementary school through graduate school. You must make these payments directly to the qualifying educational organization or medical provider.

Use loans rather than gifts

Lending money to your beneficiaries is a viable option to avoid current gift taxes or the use of your lifetime gift exclusion. You can then use your annual gift tax exclusion to enable your beneficiary to pay the interest due and/or part of the debt principal each year.

For the month of December 2014, the minimum interest rates required by the Internal Revenue Service to be charged on loans with interest to be compounded annually, referred to as applicable federal rates (AFR), are:

- 0.34% if the term of the loan is three years or less (short-term).
- 1.72% if the term is more than three years and less than nine years (mid-term).
- 2.74% if the term is nine years or longer (long-term).

These rates are low by historical standards and provide an excellent opportunity to use loans to your beneficiaries as a technique for transferring wealth free of gift and estate taxes. However, you need to make sure that the loan is bona fide (i.e., you intend for it to be repaid) and properly documented.

Note: *Connecticut is the only state which imposes gift taxes.*

Use trusts and other family entities

Entities and trusts that should be considered for transferring future appreciation out of your estate at minimal or no gift tax include:

- **GRAT:** A GRAT pays you an annuity at a fixed rate in exchange for the assets transferred to the GRAT. If the transferred assets appreciate in excess of the interest rate used by the IRS (2.0% in December 2014), the excess appreciation will pass tax-free to your beneficiaries. With the IRS rates relatively low, the GRAT is an attractive option (see Tax Tip 22).
- **Family limited partnerships and LLCs:** Family limited partnerships ("FLPs") and family limited liability companies ("FLLCs") can be very effective gift and estate tax planning vehicles (though not without some complications and risks). These entities allow you to transfer assets to your beneficiaries, typically at a discounted value, while you retain control of investment decision and the timing and amount of distributions to the partners (typically family members) (see Tax Tip 23).
- **Personal residence trust:** This is a form of a GRIT (which is a grantor retained interest trust) that uses your principal residence as the asset contributed to the trust with your right to live in the house for a period of time as the annuity payment.

tax tip

23

THE ADVANTAGES OF AN FLP OR FLLC

Let's assume in 2015 you and your spouse have not yet used any of your lifetime gift exclusions of \$10.86 million (\$5.43 million each). You can transfer assets valued at \$15,514,286 to an FLP or FLLC, in addition to your annual exclusion gifts, free of gift taxes (based on the assumption that you can sustain a 30% minority and marketability discount on the value of the limited interests).

How much will your beneficiaries receive? The value of their limited partnership interests could grow, free of gift or estate taxes, to \$41,158,649 in 20 years from the initial amount of \$15,514,286 using a 5% after-tax growth rate. By comparison, if the assets were left to accumulate in your estate, the estate tax could be as high as \$12,119,460 (net of the \$10.86 million exclusion assuming a maximum rate of 40%), leaving \$9,039,189 to your beneficiaries. Thus, there is a potential savings of \$12,119,460.

- **Irrevocable life insurance trust ("ILIT"):** An ILIT can remove life insurance proceeds from your estate, thereby transferring substantial wealth to your beneficiaries. However, payment of premiums and gift taxes may reduce the benefits and are subject to gift taxes.
- **Charitable trust:** A charitable trust can help you diversify your portfolio and combine estate planning with your charitable desires. See the chapter on charitable contributions for a more detailed discussion.
- **Bypass trust:** This trust can help you divide your assets properly, so that the future income and appreciation on the assets in the bypass trust escape estate tax when the second spouse dies. However, in states that only allow an exclusion that is less than the federal exclusion, it may be appropriate to limit the amount going into a bypass trust.

Utilize your generation-skipping transfer tax exemption

If you transfer assets directly to your children and they eventually pass the assets down to their children, two levels of estate tax will be paid (assuming both estates are in excess of the exemption amounts). If you make transfers directly to your grandchildren, or for their eventual benefit, through a trust or other entity, or to other "skip persons" (individuals two or more generations lower than you), you will be subject to the GST tax (at a 40% estate tax rate under current law) in addition to gift or estate taxes.

The GST exemption allows you to transfer up to \$5.34 million free of the GST tax in 2014 (increasing to \$5.43 million in 2015). If you have not yet used the full amount of your gift tax exemption, consider making gifts to your grandchildren (or to a trust for their benefit) up to the amount of your remaining GST tax exemptions, if you can afford to do so. There is no portability between spouses for the GST exemption.

GRANTOR RETAINED ANNUITY TRUST

When you create a GRAT, you (as a grantor) have made a gift equal to the fair market value of the assets transferred to the GRAT less the present value of the annuity payments you will receive from the trust during the trust's term. The annuity payments are calculated at the IRS prescribed rate so there is no gift tax on transfer to the GRAT ("zero-out" GRAT) and theoretically no assets should be left at the end of the trust term.

The success of the GRAT depends on the amount of income earned by the GRAT and appreciation of the assets transferred into the trust. Income and asset appreciation in excess of the IRS rate (for example 2.0% used for December 2014 transfers) will

cover annuity payments during the term of the trust and remaining assets will pass to your beneficiaries gift tax-free (see Tax Tip 22).

All income earned by the GRAT is taxable to you, so the trust's assets are not depleted by income taxes.

Note: *If you should die before the expiration of the GRAT's term, the assets would be brought back into your taxable estate, subject to certain limitations.*

FAMILY LIMITED PARTNERSHIPS AND LIMITED LIABILITY COMPANIES

As Tax Tip 23 illustrates, FLPs or LLCs can be very beneficial estate planning tools. You can contribute assets to such an entity in exchange for general partnership and limited partnership interests (or member interest if an LLC). You and/or your spouse typically keep the general partner interest (or remain the managing member of a limited liability company). This interest allows you to retain management control of the investment and distribution decisions (though this control must be set up carefully). You would typically gift only the limited partnership interests, but not in excess of your available annual and lifetime exclusions, thereby avoiding gift tax. Because the limited interests are minority interests subject to lack of marketability and lack of control, the value of the gift can be discounted and the corresponding tax-free amount of the gift can be increased. You should obtain an appraisal to substantiate the discounted value. Care must be exercised to be sure that the control does not result in the FLP's entire assets being included in the grantor's estate.

An even more effective way to use an FLP or LLC is to create trusts to hold the limited partnership interests for your beneficiaries. These trusts can be grantor trusts for tax purposes, requiring you, as grantor, to include all of the income of the trust on your tax return. You pay all the taxes on the income earned by the FLP or LLC, allowing the trust to grow tax-free. In effect, you are making an additional tax-free gift. Before doing this, you should make sure your financial position will allow you to continue paying all the income taxes even though you cannot take any cash distributions from the FLP or LLC.

Rather than gifting the limited partnership interests, another way to transfer the interests to your beneficiaries is to sell the interests to a grantor trust for their benefit. Since such a trust usually has limited funds to purchase the interests, the sale would be done on an installment basis (subject to a rule requiring the trust to be adequately capitalized). The installment payments that you are required to receive would come from distributions to the trust from the partnership, typically from the annual income. By using

this grantor trust method, the trust can receive the income free of taxes, thereby increasing the annual cash to fund payment of the installment note.

While FLPs and FLLCs can be effective estate planning vehicles, they must be carefully structured, fully implemented substantially before death occurs, and have a bona fide, nontax purpose. In addition, the proper tax and accounting records should be maintained, income and gift tax returns should be carefully prepared and all transactions should conform to the legal documents. Unless these precautions are taken, the arrangement may not be upheld in the event of a challenge by the Internal Revenue Service.

QUALIFIED PERSONAL RESIDENCE TRUST

A qualified personal residence trust ("QPRT") is a form of a GRIT that allows you to transfer your personal residence to a trust (typically for your children's benefit) even though you continue to live in the home during the trust's term (e.g., ten years). You hold an income interest in the home based on the present value of your right to live there during the term of the trust. Gift tax applies to the fair market value of the house reduced by the retained income interest (as actuarially computed using IRS interest rates). If there is a decrease in real estate values, this remainder value may be relatively small.

The value of the house at the end of the QPRT's term will go to your beneficiaries free of additional gift or estate taxes. When the

QPRT term expires, your children (or a trust for their benefit) will own the residence. They must charge you a fair market value rent to allow you to continue using the residence, and the rent you pay will decrease your taxable estate. If you do not intend to live in the home and your beneficiaries do not want to live there, the trust can sell the house and reinvest the funds in other investments. In either case, there is no additional gift tax when the QPRT terminates. However, the benefits are lost if you die before the QPRT term ends.

LIFE INSURANCE

Life insurance can serve an important function in your estate plan because it can provide your beneficiaries liquidity to pay estate taxes, especially if the value of your business (or other non-liquid assets) represents a significant portion of your estate. Life insurance can also provide immediate funds to help your family maintain their standard of living and for other purposes. But if the proceeds are left in your taxable estate, the federal estate tax could reduce the proceeds by as much as 40% for 2014 and beyond. To avoid this tax, you must ensure that the proceeds of your life insurance policies are not payable to either your or your spouse's estate, and that neither of you possess any incidence of ownership in the policy at death.

A properly structured irrevocable life insurance trust (ILIT) can remove life insurance proceeds from your estate, if the trust is both the policy's owner and beneficiary. The trust can also provide income to your surviving spouse and principal to your children (or

chart

12

2014 STATE ESTATE TAX RATES AND EXEMPTIONS

State	Maximum Estate Tax Rate	Maximum Gift Tax Rate	Exemption
New York	16%	None	\$1,000,000 / \$2,062,500*
New Jersey	16%	None	\$675,000
Connecticut	12%	12%	\$2,000,000
Pennsylvania	(a)	None	None

(a) An inheritance tax of 4.5% is imposed on transfers to direct descendants and lineal heirs, 12% on transfers to siblings and 15% on other taxable transfers.

*The exemption amount changed on April 1, 2014

Note: California has no estate tax.

other beneficiaries) upon your spouse's death. In addition, the trustee can properly manage and invest the insurance proceeds for future growth.

If you use any of the following funding methods, you can make the trust the owner of the insurance policy without being deemed to have any incidence of ownership:

- Gift sufficient funds to the trust so it can buy the insurance policy and pay all current and future premiums.
- Assign a current policy to the trust and gift future premiums. However, the transfer must be completed at least three years before your death to avoid inclusion in your taxable estate.
- Gift to the trust the annual premiums on a policy owned by the trust either by paying them directly or first depositing them in a trust account.
- Sale of the policy to the trust.

Be careful of gift tax issues to the extent you gift funds to purchase the policy, pay premiums or transfer an existing policy that has value. You will only incur a gift tax if the amount exceeds the available annual exclusion and any remaining lifetime gift tax exemption. The government's position is that the annual exclusion is only available if the trust document includes a withdrawal (Crummey) power and the beneficiaries are notified in writing of their right of withdrawal. It is important to properly comply with this administrative requirement.

There are some disadvantages to life insurance trusts, but they can be minimized with proper planning. There will be some additional costs: You will incur legal fees since a carefully drafted trust instrument is needed to satisfy specific rules, and there may be trustee commissions. Also, income tax returns may be required if the trust has assets generating taxable income. These are almost always grantor trusts. However, if the trust only holds the life insurance policy and you pay the annual premiums through gifts, income tax returns will generally not be required.

If you have a life insurance policy that has been in force for at least three years, it may prove beneficial to review the policy to see if premiums can be lowered and/or the death benefit can be increased. It is sometimes possible to find a more favorable policy and obtain it in exchange for your old policy on a tax-free basis.

STATE ESTATE TAX CONSIDERATIONS

You should keep in mind that many states also impose an estate or inheritance tax on persons who are domiciled in the state or have property located in the state. Some of these states continue to impose their estate or inheritance tax even if there is no federal estate tax. Others (e.g., Florida) impose no such tax when there is no federal estate tax credit for taxes paid to a state.

Changes to estate taxes in New York

On April 1, 2014, New York State passed new legislation known as the Budget Legislation with the new estate tax rates and estate exclusion amounts. The new estate tax provisions are in effect for decedents dying on or after April 1, 2014.

Prior to this new legislation, New York estates above \$1 million in assets were subject to New York estate taxes. Under the Budget Legislation, the estate exclusion amount will be gradually increased and by April 1, 2017 it will reach the 2013 federal estate tax exclusion of \$5.25 million. After January 1, 2019 the basic exclusion amount will equal the federal exclusion amount and will be indexed for inflation in the same manner as the federal exclusion. Below are the basic exclusion amounts ("BEAs") for decedents dying on or after the following dates:

- April 1, 2014 and before April 1, 2015: \$2,062,500.
- April 1, 2015 and before April 1, 2016: \$3,125,000.
- April 1, 2016 and before April 1, 2017: \$4,187,500.
- April 1, 2017 and before Jan. 1, 2019: \$5,250,000.
- January 1, 2019 and beyond: federal exclusion amount indexed for inflation.

Unfortunately, the above basic exclusion amounts start to phase out once the estate's taxable value exceeds the BEA in effect at that time. Furthermore, the estate's exclusion amount is fully phased out once the estate's taxable amount is over 105% of the current BEA.

The new legislation also provides for inclusion of taxable gifts "not otherwise included" in the federal gross estate if the gift was made after March 31, 2014 and before January 1, 2019 and the gift was made within 3 years of the donor's death. Annual exclusion gifts do not get pulled back into the New York taxable estate.

NONTAX CONSIDERATIONS

There are many non-tax reasons to review your estate plan and the related documents.

It is advisable to periodically review your estate plan to make sure it is in conformity with your current wishes and the current state of the law. This review should include nontax considerations, such as:

- Who are your executors and trustees?
- Do you have a power-of-attorney and is it current?
- Is your health care proxy and/or living will current?
- Have you provided for long-term care for your spouse and yourself?
- Are the beneficiaries on your qualified plans and life insurance policies in accordance with your present desires?
- Does your estate plan include new children, grandchildren, etc.?
- Have you named appropriate guardians for your minor children should both parents be deceased while the children remain minors?
- Has anyone mentioned in your will died?
- Will your assets be preserved for your family in the case of a divorce?
- Do you have adequate creditor protections included in your planning?
- At what age do you want your children, grandchildren or other beneficiaries to have full access to your assets?
- Do you have a beneficiary with special needs that you want to provide for?
- Do you wish to leave a legacy to a charitable or educational organization?
- If there is a family business, are you satisfied with the beneficiaries who will receive that interest? Has a succession plan for the business been put into place? Do you need to equalize amongst your children where only children working in the business are receiving interests in the business?

tax credits

There are many credits available to reduce your federal tax liability, but all are subject to complex limitations based on income and whether or not you are subject to the alternative minimum tax.

TAX CREDIT OVERVIEW

The following is a discussion of the credits that impact most taxpayers:

Foreign Tax Credit

The U.S. taxes its residents on their worldwide income including foreign-sourced income which may be also subject to tax in foreign jurisdictions. To avoid double taxation, subject to certain limitations, the U.S. allows its residents either a credit or deduction for taxes imposed by foreign countries and possessions of the U.S. In general, a credit is more advantageous as it is a dollar-for-dollar offset to the taxpayer's U.S. income tax liability, whereas a deduction is a reduction to income subject to tax. There are limits on the amount of foreign tax credits an individual may be able to take in a particular year. There is a separate calculation of foreign tax credits allowed each year which could result in a difference between your regular and AMT foreign tax credit allowed. Any foreign tax credits not fully utilized in the current year due to limitations may be carried back one year and forward ten years. The most common forms of income that result in the payment of foreign taxes include dividends paid by foreign corporations and business income earned by foreign pass-through entities. It is very common to incur foreign taxes through securities that are held in your investment accounts or from an underlying ownership interest in a partnership or other pass-through entity that has an investment in a foreign entity.

Child Tax Credit

A nonrefundable child tax credit of \$1,000 per qualifying child is available to offset your tax liability.

Qualifying children are defined as:

- A son, daughter, stepson, stepdaughter, or a descendant of such child; a brother, sister, stepbrother, stepsister, or a descendant of such relative.
- A child who has not attained the age of 17 by the end of the tax year and who is either a U.S. citizen or national, or a resident of the U.S.

However, the child tax credit is not available to many taxpayers since it begins to phase out when MAGI reaches \$110,000 for joint filers, \$55,000 for married filing separately and \$75,000 for unmarried individuals, head of household and qualifying widowers. The credit is reduced by \$50 for every \$1,000, or fraction thereof, of MAGI above the threshold amount.

Should the credit be disallowed, an additional child tax credit may be allowed. Individuals are eligible for a refundable child tax credit equal to 15% of their earned income in excess of \$3,000.

The earned income limitation is set at \$3,000 through 2017. For taxpayers with three or more qualifying children, the refundable credit will be equal to the lesser of the credit that would have been allowed without the tax limit and the excess of the taxpayer's social security taxes for the year over the taxpayer's earned income credit for the year. The credit is allowed up to the \$1,000 per child credit amount, if the allowable child tax credit exceeds the total tax liability, taking into account the AMT.

Child and Dependent Care Credit

If you pay someone to take care of your children or other qualifying persons so that you and your spouse can work or go to school, then you qualify to take the credit for child and dependent care expenses. Qualifying expenses include expenses paid for household services and for the care of a qualifying individual. A qualifying individual can include a dependent who was under age 13 at the close of the tax year or a dependent who was physically or mentally incapable of self-care and who had lived with you for more than half of the year.

The maximum amount of dependent care expense on which you can calculate the credit is \$3,000 for one qualifying individual or \$6,000 for two or more qualifying individuals. The amount of the dependent care expenses eligible for a credit must be reduced by any payments received through an employer-provided dependent care assistance program. The amount of the allowable credit is based on your AGI, with the applicable credit percentage ranging from 20% to 35%. The 35% credit is for lower income taxpayers. Once your AGI exceeds \$43,000, the maximum rate allowed is 20%. These percentages entitle you to a credit of \$600/\$1,200 and \$1,050/\$2,100, respectively, based on the number of qualifying individuals.

American Opportunity and Lifetime Learning Credits

There are two education-related credits: the American Opportunity Credit ("AOC"), which is a modified Hope Credit, (scheduled to expire on December 31, 2017) and the Lifetime Learning Credit. These credits are available to individuals who incurred tuition expenses pursuing college or graduate degrees or vocational training. The AOC allows taxpayers a maximum credit per eligible student of \$2,500 for 2014. The Lifetime Learning Credit allows a taxpayer to take a maximum credit of \$2,000 per taxpayer. A more detailed discussion of these credits can be found in the chapter on education incentives.

Adoption Credit

For 2014, a nonrefundable credit of up to \$13,190 may be claimed for qualified adoption expenses. The credit is phased out ratably for taxpayers with an MAGI over \$197,880 and no credit is allowed for taxpayers with an MAGI over \$237,880 or higher. Qualified adoption expenses include reasonable and necessary adoption fees, court costs, attorney fees and other expenses which are directly

related to the legal adoption of an eligible child. An eligible child is an individual who has not attained the age of 18 at the time of the adoption or who is physically or mentally incapable of caring for himself or herself. A credit for the adoption of a special needs child is allowed regardless of the actual qualified expenses.

For U.S. adoptions, you may be able to claim the credit before the adoption is finalized and if you adopt a special needs child you may qualify for the full amount of the credit.

For 2015, the credit allowed is \$13,400 and phased out ratably for taxpayers with MAGI over \$201,010 and completely phased out at \$241,010.

Residential Energy Property Credit

The tax credit allowed for the cost of qualifying improvements that meet certain energy efficient standards has been extended through December 31, 2014, as a result of TIPA.

A tax credit is allowed for the cost of qualifying improvements that meet certain energy efficient standards. The credit is equal to the sum of:

- 10% of amounts paid or incurred for energy efficient building envelope components plus
- Specified dollar amounts for the purchase of residential energy property.

The credit is limited to \$500 (\$200 for windows) minus the credits claimed in previous years. Qualifying energy efficient improvements include residential exterior doors and windows, insulation, heat pumps, furnaces, central air conditioners and water heaters.

Residential Energy Efficient Property Credit

A tax credit is allowed up to the lesser of 30% of the cost of qualified energy property and \$500 for each half kilowatt of capacity of fuel cell property installed before 2017. This credit applies to expenditures for the following qualified energy equipment:

- Solar electric property expenditure, such as for photovoltaic cells,
- Solar water heaters,
- Small wind energy property,
- Geothermal heat pump property, and
- Fuel cell property.

Qualified Plug-In Electric Drive Motor Vehicle Credit

A credit for the purchase of a plug-in vehicle expired as of December 31, 2013. This credit was not reinstated as part of TIPA. Generally, for individuals who purchased plug-in electric vehicles, the maximum credit available was \$7,500, and if the vehicle did not have battery capacity of at least 5 kilowatt hours, the minimum credit of \$2,500 applied.

Qualified Research Credit

A credit for expenditures paid or incurred for research that was technological in nature and whose application was for use in developing a new or improved business component has been extended to December 31, 2014, as a result of TIPA. Generally, the credit is equal to 14% of the qualified research expenditures incurred that exceeds 50% of the average qualified research expenses for the three prior years.

AMT Credit

If you pay the AMT in one year, you may be entitled to a tax credit against your regular tax in a subsequent year. You qualify for an AMT credit if any of your AMT liability is derived from "deferral items" such as depreciation adjustments and the tax preference on the exercise of ISOs. See the chapter on the AMT for a more detailed discussion.

Work Opportunity Credit

The work opportunity tax credit allowed for those who hired a member of a targeted group has been extended through December 31, 2014, as a result of TIPA. Members of a targeted group included veterans, certain food stamp recipients and qualified summer youth (ages 16-17). The credit is based on qualified wages paid to the employee for the first year of employment. Generally, qualified wages are capped at \$6,000. The credit is 25% of the qualified first-year wages for those employed at least 120 hours but fewer than 400 hours and 40% for those employed 400 hours or more.

education incentives

Tuition funding programs, tax credits and education expense deductions are available to help many families fund the cost of college and certain other educational expenses.

EDUCATION INCENTIVES AVAILABLE

There are education incentives that provide tax benefits to assist you in funding the cost of a college education for your family members, but some of them are subject to phase outs based on AGI, thereby limiting the incentives that may be available to you. See the state tax issues chapter for additional incentives.

The tax credits and deductions available to help pay college costs include:

- Section 529 plans.
- American Opportunity credit and Lifetime Learning credit.
- Education deductions, including student loan interest.

529 PLANS

Probably the most popular tax incentive college funding method is a Section 529 plan (qualified tuition program) since it is available to all taxpayers, regardless of their income. These plans offer the following benefits:

- Distributions are tax-free if used to pay qualified education expenses at any accredited college, university, or graduate school and most community colleges and certified technical training schools in the United States as well as many schools abroad.
- Distributions can be used to pay for a computer, computer software and even internet expenses, so long as the computer is used for college work. Allowable computer software must be predominantly educational in nature, so software designed for games, sports or hobbies is excluded.
- Control of the funds remains in the hands of the account owner (not the beneficiary), even after the beneficiary reaches legal age, permitting you to change beneficiaries at any time and for any reason. You might need to change the beneficiary to another child if the original beneficiary does not go to college, or excess funds remain in one child's account after college. You can also change the beneficiary to yourself if a financial emergency requires you to have access to the funds. However, any distributions representing income earned within the plan will be taxable if not used for qualified education purposes.
- Age and income restrictions do not apply to the account owner or beneficiary, unlike other tax incentive education plans.

- You are not limited to just the plans offered by the state you live in. In addition, you can change your choice of plan every 12 months and roll over plan funds to a new plan. This gives you more investment options and possibly higher contribution ceilings.

Funds deposited into a Section 529 plan for the benefit of another person are considered a gift for gift tax purposes. Although the plan's assets are excluded from your estate, there are gift tax considerations. For 2014 and 2015, you can use up to five years of annual gift exclusions up front, allowing you to gift as much as \$70,000 per beneficiary (\$140,000 if married) without using any of your lifetime gift tax exclusion or incurring a gift tax. However, to the extent you used your annual gift exclusion to fund a 529 plan, you will have to reduce other tax-free gifts to stay within the annual exclusion amount of \$14,000 per donee. Also, if your state of residence allows a deduction for the contributions to the plan, you will generally only be allowed to take the deduction in the initial year that you fund the plan for one year's amount.

Private institutions can offer a prepaid tuition program if they satisfy Section 529 requirements. Distributions from these private plans used for qualified education expenses will also be tax free.

Section 529 plans also have their disadvantages. Contributions to the plans are not deductible for federal income tax purposes. In addition, you lose some control of future investment decisions although you do retain investment option flexibility within the plan's choices. Also, even though you can withdraw funds for uses other than qualified higher education expenses, you'll have to pay a 10% penalty on the earnings, similar to a premature distribution from a retirement account.

Observation: *The recently enacted TIPA included the Achieving a Better Life Experience ("ABLE") Act. This new law allows states to establish and operate an ABLE program under which severely-disabled individuals (under age 26) would be able to open a section 529 savings account and make annual contributions up to the gift tax exclusion limit of \$14,000 for 2014, adjusted annually for inflation.*

AMERICAN OPPORTUNITY AND LIFETIME LEARNING CREDITS

The American Opportunity credit ("AOC") and Lifetime Learning credit are available if you pay qualified tuition and related education expenses, which includes course materials such as books, supplies and equipment. Room and board expenses do not qualify for either credit.

However, these credits have income limitations which phase out

the available credits. The AOC is phased out ratably with MAGI between \$80,000 and \$90,000 if single or head of household and \$160,000 to \$180,000 if married filing jointly. The Lifetime Learning credit is phased out ratably with MAGI between \$54,000 and \$64,000 for 2014 (\$55,000 to \$65,000 for 2015) if single or head of household and \$108,000 to \$128,000 for 2014 (\$110,000 to \$130,000 for 2015) if married filing jointly.

- **American Opportunity credit.** A \$2,500 annual credit per student is available for the first four years of post-secondary education with enrollment on at least a half-time basis in a program leading to a degree. Generally, you can receive up to \$1,000 as a refundable credit even if you owe no taxes. However, the refundable credit will not be allowed to an individual if he or she is subject to the kiddie tax and other limitations.
- **Lifetime Learning credit.** A \$2,000 annual credit per taxpayer is available for an unlimited number of years of post-secondary, graduate, or certain other courses to acquire or improve your job skills. The credit is equal to 20% of the first \$10,000 of qualified expenses, up to the maximum amount of \$2,000.

EMPLOYER-PROVIDED EDUCATIONAL ASSISTANCE

Under a qualified educational assistance plan, up to \$5,250 of the benefits will not be included in the gross income of the employee. There is no requirement that educational assistance be job-related. Educational expenses include tuition, fees and similar payments, books, supplies and equipment. However employer-provided tools or supplies that the employee may retain after completing a course of instruction are includible in gross income.

INTEREST ON EDUCATION LOAN

Certain education expenses are deductible in computing against your federal AGI, subject to income limitations, including interest on education loans. You can take the above-the-line deduction of up to \$2,500 of interest paid on qualified education loans annually, subject to a phaseout that eliminates the deduction. The maximum deduction is reduced when your MAGI reaches \$130,000 if married filing jointly and \$65,000 for other taxpayers. The deduction is completely phased out when MAGI is \$160,000 if married filing jointly and \$80,000 for other taxpayers. For more on this topic please see the chapter on interest expense.

24

AGI TOO HIGH TO CLAIM A CREDIT? HAVE YOUR CHILD TAKE IT

If you pay qualified expenses for your children but income limitations prevent you from taking the American Opportunity credit or Lifetime Learning credit, have your children claim the credit on their tax returns instead. However, you must forego the dependency exemption that you are entitled to. The maximum federal tax benefit you will lose in 2014 is \$1,383 (\$3,950 exemption times the maximum rate of 35%^{*}). If your child can claim the full amount of the Lifetime Learning credit to reduce his or her own tax liability, you will save a maximum of \$617 of taxes, or \$1,117 claiming the American Opportunity credit. This savings could increase up to \$2,000 or \$2,500, respectively if you are in the AMT, as no personal exemption is allowed in computing your AMT. Or if you are not in the AMT and your AGI is above certain threshold amounts, your personal exemption deduction may also be disallowed. This benefit may be reduced when considering the state income tax impact.

**Although the maximum federal income tax rate is at 39.6%, the maximum rate that can be applied for the education credits is at 35%, because that is the rate where the personal exemptions are fully phased out.*

planning for same-sex couples

The Supreme Court decision holding that Section 3 of DOMA is unconstitutional provides that same-sex married couples are to be treated as married for federal purposes.

OVERVIEW

The Supreme Court has held that Section 3 of DOMA — which provided a federal definition of marriage that limited its scope for purposes of federal law to a legal union between a man and a woman, and a spouse as only a person of the opposite sex who is a husband or wife — is unconstitutional.

It did not address Section 2 which provides that a state is not required to give effect to any public act, record, or judicial proceeding of another state respecting a relationship between members of the same-sex that is treated as a marriage under the laws of another state.

It appears that for the time being, states that do not permit same-sex marriages are not required to permit them or recognize them. However, since this ruling, as of the time of this writing, 36 states have legalized same-sex marriages either legislatively or through the courts. See the chapter on state tax issues for specific rules pertaining to the states of California, Connecticut, New Jersey, New York and Pennsylvania.

In addition, on January 16, 2015, the U.S. Supreme Court decided it will tackle the issue of whether same-sex couples have a constitutional right to marry or whether states are allowed to ban same-sex marriages.

PLACE OF CEREMONY

On August 29, 2013, the IRS issued Revenue Ruling 2013-17, which applied the place of ceremony rule for married same-sex couples retroactively for all open tax years. This means as long as the marriage was legal in the state where the marriage occurred, it will be considered a marriage regardless of the state in which the couple resides.

The rule noted that the term “marriage” does not apply to registered domestic partnerships, civil unions or “other similar formal relationships.”

ADVANTAGES OF THE REPEAL OF DOMA

The right/requirement to file a joint federal tax return

Married filing separately is the other option. Returns using the single filing status are no longer an option for married same-sex couples.

Cost of health insurance premiums

An employee’s premiums paid by the employer for coverage of a same-sex spouse can now be excluded from income. The spouse

can pay health coverage premiums for the same-sex spouse on a pre-tax basis.

Continuation of health coverage for same-sex spouses can be obtained under COBRA if a qualifying event occurs.

Same-sex spouses now have the rights of married spouses in retirement plans

Surviving spouses can rollover inherited IRAs and delay taking distributions until they are age 70 1/2. This can be particularly helpful if there are significant age differences between the spouses.

The beneficiary designation is presumed to be the spouse. A spousal consent is needed if there is a non-spouse beneficiary.

Please see the chapter on retirement plans for more information.

Social Security spousal benefits

One-earner couples can receive a benefit of an extra 50% of the working spouse’s retirement benefit. For two-earner couples, the lower earning spouse can receive his benefit plus a spousal benefit to bring his total benefit up to 50% of his husband’s total benefit.

TAX PLANNING FOR MARRIED SAME-SEX COUPLES

2014 and beyond

Married same-sex couples are required to file as married-filing-joint or married-filing-separately. The single filing status is no longer an option!

Because the combined income of both parties is considered, there can be significant tax consequences and opportunities for a couple who is now required to file a joint return (or married filing separately). The consequences are a result of the changes due to limitations, phase-outs and increased tax brackets that are based on the total taxable income. The following are a few examples of income tax provisions that should be considered when preparing to file a joint tax return:

- Filing status, tax rate schedules and brackets.
- Dependent care credit, elderly and disabled credit, adoption expense credit.
- Earned income credit.
- AMT exemption and brackets.
- Standard deduction.

- Level at which itemized deductions begin to phase out.
- Social Security inclusion.
- Amounts received from health plans and contributions made to a health plan.
- Exclusion of gain from sale of principal residence.
- Dependent care programs.
- Statutory fringe benefits.
- Exclusion from certain savings bonds used for education.
- Charitable contributions.
- Medical expense deduction.
- Deductions for contributions to an IRA.
- Various provisions of retirement plans, including survivor annuities.
- Definition of dependent.
- Attribution of participation in connection with passive activities.
- Limitation on capital losses.
- Gains on sales of depreciable property to a related taxpayer.
- Persons required to file income tax returns.
- Failure to pay estimated tax

OPPORTUNITY TO CLAIM REFUNDS

There may be an opportunity to file amended returns claiming joint (or married filing separately) status for the last 3 years as a means to receive a refund of taxes. Amended returns must be filed within 3 years after the original due date, or if extended, within 3 years after the date the return was filed. Keep in mind that amendment of prior year returns by spouses now permitted to file jointly may result in a “marriage bonus” for some couples, but others may incur a “marriage penalty,” depending upon the couple’s specific situation.

Spouses with relatively equal income could end up paying more in taxes when they file jointly instead of each filing their returns using the single status. This is because the combined income could

push spouses above the threshold for higher tax rates, including the higher tax rates for long-term capital gains and qualified dividends (20%) and the Medicare Contribution Tax on net investment income (3.8%).

Spouses with very large differences in income may pay less tax when they file jointly. This is because the tax system “averages” the total income and a lower rate may be applied. However, spouses with large income differences may be at a disadvantage if filing jointly in community property states, such as California.

If a couple decides to amend a tax return for a previous year, they can choose to amend 1 year, 2 years or all open years. They can cherry pick which returns they wish to amend.

GIFT TAX CONSIDERATIONS

Before the repeal of DOMA, the excludable amount was \$14,000 for 2014. Any additional gifts to a same-sex spouse would utilize the transferor’s available lifetime exemption. Since the repeal of DOMA, same-sex married couples are entitled to the unlimited marital deduction. This means they can make tax-free transfers to their same-sex spouse without any gift tax consequences.

Transfers to non-U.S. citizen same-sex spouses do not qualify for the unlimited marital deduction. However, such transfers are eligible for an increased annual exclusion amount (\$145,000 for 2014 and \$147,000 for 2015).

GIFT SPLITTING

Gift splitting allows a married couple to split all gifts made by one spouse and treat the total as if the gift was made one-half by each spouse. Under DOMA, same-sex couples could not split gifts to take advantage of the double annual exclusion (\$14,000 per person, per donee or \$28,000 per married couple, per donee for 2014). The overturning of section 3 of DOMA means that same-sex married couples can split a gift and treat as if half was made by each spouse.

There may be an opportunity to file amended gift tax returns for the prior 3 years in order to increase the amount of life-time gift tax exemption available for future years. In order to file an amended gift tax return, Form 843 should be filed with the IRS. This should be considered for any open years where a gift tax return was filed and gifts between married parties were treated as taxable gifts.

ESTATE TAX CONSIDERATIONS

The estate tax exemption increased from \$5,340,000 for 2014 to \$5,430,000 for 2015.

An estate will not incur an estate tax for any assets passing outright or in trust for the benefit of a surviving spouse. This defers the payment of any estate tax on these assets until the death of surviving spouse. The surviving spouse must be a U.S. citizen.

Under DOMA, the assets in excess of the estate tax exemption left to a same-sex spouse were includible in the first estate. This unfairly “double taxed” the assets, as they would be taxed again if the surviving spouse’s estate were in excess of the estate tax exemption.

This basically outlines the case of *United States v. Windsor*, which addressed the “differential treatment compared to other similarly situated couples without justification.” The U.S. Supreme Court held that Section 3 of DOMA was unconstitutional in requiring this differential treatment and same-sex couples can now leave assets to their spouse without incurring a federal estate tax liability.

There is an opportunity to file refund claims and get back any excess estate taxes. The IRS has stated that amended estate tax returns can be filed using Form 843.

PORTABILITY

ATRA permanently extended the concept of portability for 2011 and beyond. This provision is now available to same-sex couples.

Portability allows a decedent who does not use all of his/her estate tax exemption (\$5,430,000 for 2015) at their death to transfer the unused portion of their estate tax exemption to the surviving spouse so that the unused exemption amount can be added to the second spouse’s estate tax exemption.

Portability applies to the unused exclusion amount of the LAST pre-deceased spouse only.

Example: *In 2015, a decedent has \$3.43 million of assets at his/her death. Since the estate tax exemption is \$5.43 million for 2015, there is \$2 million of unused estate tax exemption. This amount can be transferred to the spouse, leaving the survivor with \$7.43 million (\$2 million plus the 2015 applicable exclusion of \$5.43 million).*

For more information on estate and gift tax planning techniques, please see the chapter on gift and estate tax overview.

CONCLUSION

There are many factors that should be considered by same-sex couples when deciding if amended returns are necessary. In addition, tax planning is very important for a newly married couple, as their tax liability could be significantly higher than prior years, when single returns were filed. Same-sex couples should have their income and estate tax plans reviewed as well as their overall financial situation so as to maximize savings.

international tax planning and reporting requirements

Foreign income exclusions and foreign tax credits can significantly reduce the U.S. taxes you pay on foreign-sourced income and help you avoid double taxation. Complex reporting is required for U.S. persons owning foreign assets including bank and other financial investments.

FOREIGN TAX ISSUES

Multinational clients with cross-border income from employment and investments are in today's mainstream. Many taxpayers are discovering that they are subject to taxation and/or reporting in both U.S. and foreign jurisdictions. Not all U.S. citizens and resident aliens are aware of their obligation to report their worldwide income to the Internal Revenue Service. As a result, the United States continues to pursue U.S. persons who fail to report income and file certain tax forms. These complex issues not only impact you if you are on an overseas assignment or retired abroad, but have broad-reaching implications even if you have never left the United States. For instance, these issues arise if you invest in hedge funds, private equity funds, and other entities that own interests in foreign operating businesses or invest in foreign securities or have foreign retirement plans.

This chapter is intended to provide an overview of the income exclusions, foreign tax credits, reporting requirements, and elections involving foreign employment and investments.

Significant legislation enacted in 2010 (the "HIRE Act") imposed a new U.S. withholding regime for U.S. income earned by non-U.S. persons and tightened the reporting requirements for offshore accounts and entities set up in foreign jurisdictions. This provision

of the HIRE act is the Foreign Account Tax Compliance Act, also known as FATCA. FATCA requires that certain foreign financial institutions play a key role in providing U.S. tax authorities greater access into U.S. taxpayers' foreign financial account information. See FATCA section below.

Through the creation of the FATCA regime the U.S. has inspired a movement towards greater global tax transparency; similar to the FATCA compliance regime, banks and other investment institutions of foreign nations will have significant additional reporting responsibilities. The Organization for Economic Co-operation and Development ("OECD") released the Common Reporting Standard ("CRS") this year with more than 50 foreign jurisdictions signing multilateral competent authority agreements to automatically exchange information.

FOREIGN EARNED INCOME EXCLUSION AND FOREIGN HOUSING EXCLUSION/DEDUCTION

In general, the worldwide income of a U.S. citizen or resident who is working abroad is subject to the same income tax and return filing requirements that apply to U.S. citizens or residents living in the United States. However, if you are working abroad, you may qualify for one or more special tax benefits:

tax tip

25

TAX BENEFITS OF THE FOREIGN EARNED INCOME AND HOUSING EXCLUSIONS

Your company sent you to work in Dubai in 2014 for several years, so you qualify as a bona fide resident of the UAE in 2014. Assume you earn \$500,000 per year and your company reimburses you for \$125,000 of housing costs which are taxable to you. You would be able to exclude the following income from your U.S. income tax return:

- \$99,200 of your salary.
- \$41,302 of the housing expense reimbursements.

The maximum 2014 foreign earned income exclusion is \$99,200, regardless of which foreign country you are working in. The housing exclusion is based on which country and city you are living in (see Chart 13 for some of the more common foreign cities).

Dubai is considered to be an expensive city to live in, so the annual housing exclusion amount is \$57,174. Of this amount, you are not eligible to exclude \$43,485 per day, or \$15,872 for a full year. Therefore, your 2014 housing exclusion will be \$41,302 (\$57,174 - \$15,872). When added to your foreign earned income exclusion of \$99,200, you can exclude a total of \$140,502.

Therefore, you will be taxed in the United States on \$484,498 related to your employment in Dubai (\$500,000 compensation plus \$125,000 housing cost reimbursements less the exclusions of \$140,502).

Note: Although, the UAE does not impose an income tax, in this example, if you paid income tax to a country that imposes a tax, you may also be eligible to receive a foreign tax credit against the U.S. tax imposed on the remaining income. However, only 77.52% of these taxes will be allowable as a foreign tax credit that can offset your U.S. income tax (i.e., only \$484,498 of the total \$625,000 of income will be subject to tax: \$484,498 divided by \$625,000 is 77.52%).

As you can see in Tax Tip 25, your foreign housing exclusion might be limited depending on where you live. In order to see the differences in limits for housing deductions in 2014, see Chart 13 on the next page.

chart

13

FOREIGN HOUSING EXCLUSIONS

The amount of foreign housing exclusions costs that you can exclude from your 2014 U.S. income tax return depends on both the country and city you are living in. Below are listed the maximum amounts you can exclude for some common foreign cities, before the adjustment for the daily living cost of \$43.485 per day, or \$15,872 for a full year.

Country	City	Maximum Annual Housing Exclusion
Canada	Toronto	\$ 52,400
China	Hong Kong Beijing	114,300 71,200
France	Paris	86,000
Germany	Berlin	51,500
India	New Delhi	56,124
Italy	Rome	57,300
Japan	Tokyo	96,000
Russia	Moscow	108,000
Switzerland	Zurich	39,219
United Arab Emirates	Dubai	57,174
United Kingdom	London	88,700

- Exclude up to \$99,200 in 2014 and \$100,800 in 2015 of foreign earned income.
- Exclude part, or all, of any housing income reimbursements you receive or deduct part, or all, of any housing costs paid (i.e., for taxpayers having salary or self-employment earnings).
- Claim a foreign tax credit against your U.S. tax liability for income taxes you pay or accrue to a foreign country, or if more beneficial, take an itemized deduction for the taxes paid.
- Reduce your overall tax liability under tax treaties that the U.S. has with foreign countries.
- Take an exemption (in certain cases) from paying Social Security tax in the foreign country based on a Totalization Agreement the U.S. has with some foreign countries to eliminate dual coverage for the same work. You will be required to pay U.S. Social Security and Medicare tax on such income.

To qualify for the foreign earned income and the foreign housing exclusions, you must establish a tax home in a foreign country and meet either the bona fide residence or physical presence test, defined below:

Bona fide residence test

To qualify under this test, you must establish residency in a foreign country for an uninterrupted period that includes an entire calendar

year. Brief trips outside the foreign country will not risk your status as a bona fide resident, as long as the trips are brief, and there is intent to return to the foreign country.

Physical presence test

This test requires you to be physically present in a foreign country for at least 330 full days in a consecutive 12-month period, but not necessarily a calendar-year period.

Planning Tip: *In certain circumstances, it may be more beneficial to forego the exclusion in favor of claiming only a foreign tax credit. If you pay no foreign tax or the effective tax rate in the foreign jurisdiction is lower than the U.S. tax rate, claiming the exclusion will generally lower the U.S. income tax liability. On the other hand, if the foreign jurisdiction imposes tax at a higher effective rate than the U.S., it is likely that the U.S. tax on the foreign earned income will be completely offset by the foreign tax credit regardless of whether the exclusion is claimed. You should consider whether foregoing the exclusion may result in a lower utilization of foreign tax credits in the current year so that a larger amount of foreign tax credits can be carried back or forward for utilization in other years. You should also consider whether the foreign earned income exclusion and housing exclusion election will mitigate your state tax burden to the extent that you have ceased to be a state resident and you remain taxable on worldwide income in the state of residency.*

Claiming the exclusion is a binding election. Once you have claimed the benefit of the exclusion in a tax year, you will be required to continue to claim it in all future years. You will be able to revoke the election, but having done so, you will not be allowed to claim the exclusion again until the sixth tax year after the year of revocation unless you receive permission from the IRS. If you have claimed the exclusion in the past, the benefit of revoking the exclusion must be weighed against the possible ramifications of being unable to re-elect the exclusion for five years. There is no downside of forgoing the exclusion if you have never claimed it in the past.

Note: *For Americans residing overseas, the foreign earned income exclusion will not be taken into consideration when calculating the applicable thresholds for the 3.8% Medicare Contribution Tax on net investment income in computing the applicable threshold for this tax surcharge.*

FOREIGN TAX CREDIT

A foreign tax credit may be claimed by U.S. citizens, resident aliens, and in certain cases by nonresident aliens. Typically states do not allow foreign taxes to offset state income tax liability. An exception to this includes New York State, which allows a credit for certain Canadian provincial income taxes. Unlike the exclusions discussed

above, you do not need to live or work in a foreign country in order to claim the foreign tax credit. You may be eligible for the credit if you paid or accrued foreign taxes in some tax year. Common examples of foreign-sourced income that may generate foreign tax credits include dividends paid by foreign corporations, including those paid on your behalf through a mutual fund, and foreign business income earned by a flow-through entity.

You are entitled to claim either a tax credit or an itemized deduction for taxes paid to foreign countries. Though not always the case, the tax credit is more beneficial since it reduces your U.S. federal tax liability on a dollar-for-dollar basis.

Generally, only foreign income taxes qualify for the foreign tax credit. Other taxes, such as foreign real and personal property taxes, do not qualify. However, these other taxes may still be deductible as itemized deductions on your U.S. income tax return. There are other situations which may prevent you from taking a foreign tax credit:

- Taxes paid on income excluded from U.S. gross income (e.g., foreign earned income exclusion).
- Taxes paid to international boycott operations countries.
- Taxes of U.S. persons controlling foreign corporations and partnerships if certain annual international returns are not filed.
- Certain taxes paid on foreign oil-related, mineral, and oil and gas extraction income.

Your ability to claim a credit for the full amount of foreign taxes paid or accrued is limited based on a ratio of your foreign-sourced taxable income to your total taxable income. This ratio is applied to your actual tax (excluding the 3.8% Medicare Contribution Tax on net investment income) before the credit to determine the maximum amount of the credit that you can claim. If you are not able to claim the full amount of the credit in the current year, you can carry the excess back to the immediately preceding tax year, or forward for the next 10 tax years, subject to a similar limitation in those years.

The credit is calculated for each separate type of foreign-sourced income. In other words, foreign taxes paid on dividends are subject to a separate limitation than foreign taxes paid on income from an active trade or business. Foreign-sourced income is generally classified into two different baskets for determining the allowable credit:

- **Passive income:** This category includes dividends, interest, rents, royalties, and annuities.

- **General limitation income:** This category includes income from foreign sources which does not fall into the passive separate limitation category and generally is income earned from salary, pensions or an active trade or business.

You are required to maintain a separate foreign tax credit limitation basket for each country in which income is resourced under an income tax treaty. This provision will apply to income classified as U.S.-sourced income under U.S. tax law, but treated as foreign-sourced under an income tax treaty. Many treaties resource income (e.g., income under the U.S. tax treaty with the United Kingdom).

EXPATRIATION EXIT TAX

If you plan on giving up your U.S. citizenship or relinquishing your U.S. legal permanent residency status ("green card") and are considered a "covered expatriate," you will pay an income tax at the capital gains rate as though you have sold all of your assets at their fair market value on the day before the expatriation date. The 3.8% additional Medicare Contribution Tax on net investment income may apply in the case of a "covered expatriate" who is subject to the exit tax. Any gain on the deemed sale in excess of a floor of \$680,000 for 2014 (\$690,000 for 2015), is immediately taxed ("mark-to-market tax"). Losses are taken into account and the wash sale rules do not apply. An election can be made to defer the tax on the deemed sale until the asset is actually sold (or the taxpayer's death, if sooner) provided a bond or other security is given to the IRS. Deferred compensation items and interests in non-grantor trusts are not subject to the tax but are generally subject to a 30% withholding tax on distributions to the expatriate. Individual Retirement Accounts and certain other tax-deferred accounts are treated as if they were completely distributed on the day before the expatriation date with no early distribution penalties to be applied.

Former U.S. citizens and former long-term residents who hold a U.S. green card for anytime during eight out of the last 15 years are subject to the expatriation regime if they:

- Had average annual net income tax liability for the five years ending before the date of expatriation or termination of residency in excess of an annual ceiling, which is \$157,000 for 2014 and \$160,000 for 2015;
- Had a net worth of \$2 million or more when citizenship or residency ended; or
- Failed to certify compliance under penalties of perjury on Form 8854, Initial and Annual Expatriation Statement, with all U.S. federal tax obligations for the five tax years preceding the date of expatriation.

A U.S. citizen or resident will have to pay tax on a gift or bequest received from an individual who had expatriated after June 17, 2008. The tax does not apply to the extent that the gift or bequest during the year is within the annual gift tax exclusion of \$14,000. The tax does not apply if the transfer is reported on a timely filed gift tax return or estate tax return or to transfers that qualify for the marital or charitable deductions. The value of a transfer not covered by an exception is taxable to the recipient at the highest rate on taxable gifts, which is currently 45%.

U.S. INCOME TAXATION OF NONRESIDENT INDIVIDUALS

Residents and nonresidents are taxed differently for U.S. tax purposes. Resident aliens are taxed on worldwide income at graduated tax rates much the same as a U.S. citizen. A nonresident alien, however, is taxed at graduated rates only on income that is effectively connected with a U.S. trade or business or at a 30% rate on U.S.-sourced income that is not effectively connected with a U.S. trade or business (unless a lower income tax treaty rate applies). Nonresident taxpayers are specifically exempt from the 3.8% Medicare Contribution Tax on net investment income.

A foreign national is generally deemed a resident alien of the U.S. if one of the two following tests is met:

- Lawful permanent residence (green card test); or
- Substantial presence test.

If you are physically present in the U.S. for at least 31 days during 2015 and have spent 183 days during the period of 2015, 2014, and 2013 counting all of the days of physical presence in 2015, but only $\frac{1}{3}$ of the days of presence in 2014, and only $\frac{1}{6}$ of the number of days in 2013, you will be deemed a resident for U.S. tax purposes.

You are treated as being present in the U.S. on any day that you are physically present in the country at any time during the day, though time spent in the U.S. for the following circumstances do not count:

1. Days you regularly commute to work in the U.S. from a residence in Canada or Mexico.
2. Days you were in the U.S. for less than 24 hours when you were traveling between two places outside the U.S.
3. Days you were temporarily in the U.S. as a regular crew member of a foreign vessel engaged in transportation between the United States and a foreign country or a possession of the U.S. unless you otherwise engaged in trade or business on such a day.

4. Days you were unable to leave the U.S. because of a medical condition or medical problem that arose while you were in the U.S.

5. Days you were an exempt individual (e.g., foreign government-related individual, teacher or trainee, student or a professional athlete competing in a charitable sporting event).

Note: *If you qualify to exclude days of presence in the U.S. because you were an exempt individual (other than a foreign government-related individual) or because of a medical condition or medical problem, you must file Form 8843, Statement for Exempt Individuals and Individuals with a Medical Condition. In addition, there are certain elections available to nonresidents who move to the U.S. that could minimize global taxation.*

Even though you would otherwise meet the substantial presence test, you will not be treated as a U.S. resident for 2015 if:

- You were present in the U.S. for fewer than 183 days during the calendar year in question,
- You establish that during the calendar year, you had a tax home in a foreign country, and
- You establish that during the calendar year, you had a closer connection to one foreign country in which you had a tax home than to the U.S., unless you had a closer connection to two foreign countries.

You will be considered to have a closer connection to a foreign country other than to the U.S. if you or the IRS establishes that you have maintained more significant contacts with the foreign country than with the U.S.

IRS Form 8840, Closer Connection Exception Statement for Aliens, will need to be submitted with your U.S. nonresident income tax return for the year in which you meet the substantial presence test and you are exempt from it because you also meet the closer connection test.

Alternatively, you may be considered a nonresident if you also would qualify as a resident of your home jurisdiction under the tie breaker clause of an income tax treaty with the U.S.

U.S. REPORTING REQUIREMENTS FOR NONRESIDENT ALIENS

Form 1040NR/1040NR-EZ

This tax form is used by nonresidents of the U.S. to annually report U.S.-sourced income and the payments of U.S. tax, made either through withholding by the payor or through estimated tax payments. The U.S. tax liability for the year is computed and any tax due in excess of payments made during the year is remitted to the U.S. Treasury. A U.S. nonresident may also be subject to state income tax on the income earned in one or more states.

Foreign nationals, nonresident aliens and other taxpayers who have filing or payment obligations under U.S. law and are not eligible for a social security number are required to obtain an Individual Taxpayer Identification Number or ITIN. The IRS will only issue ITINs when applications include original documentation (e.g., passports and birth certificates) or copies of these documents that have been certified by the issuing agency. There are certain exceptions for families of military personnel and for persons who have certain types of income subject to withholding (e.g., pensions). ITINs issued after 2012 may have a five-year expiration period.

Note: *When reporting as a U.S. nonresident, residents of another country under the provision of a treaty will be required to file Form 1040NR/1040NR-EZ (see below) and include with income tax returns certain forms to report interests in foreign entities, e.g., Forms 8621, 5471, and 8865. Refer to foreign reporting requirements for U.S. citizens and residents, below.*

Form 1042-S

If you are a nonresident of the U.S. and receive income from U.S. sources, you will receive Form 1042-S. This is the annual information return prepared by the payor to report to you and the IRS each recipient's name, address, amount and type of income paid and taxes withheld, if any. This form is normally distributed no later than March 15 of the following year. If the recipient of the income is a U.S. person, a Form 1099 would be issued instead; Forms 1099 are due to be received by U.S. persons no later than January 31 of the following year. Information on Form 1042-S may also be reported to the tax authorities in the recipients' country of residence.

Form W-8 BEN

This form is provided by a nonresident alien to a payor to certify the recipient's residency status as beneficial owner of the income. If applicable, this form should also be completed to claim the benefits of an income tax treaty.

Form W-8 BEN-E

This form is provided by a foreign entity to document its foreign status to a payor to certify the recipient's status as beneficial

owner of the income. If applicable, this form should also be completed to claim the benefits of an income tax treaty.

FOREIGN REPORTING REQUIREMENTS FOR U.S. CITIZENS AND RESIDENTS

There are many IRS tax forms that must be completed and attached to your tax return to disclose foreign holdings and to make elections that could prove valuable to you in the future. As more and more of your investments include foreign holdings, whether held directly by you or through a pass-through entity such as an investment partnership or hedge fund, your reporting requirements increase. These requirements place an additional burden on the amount of information that you must include with your income tax return. Failure to do so could result in substantial penalties and the loss of beneficial tax elections. Some of the most common of these forms are:

- Form 114 (the former TDF 90-22.1), Report of Foreign Bank and Financial Accounts.
- Form 8621, Return by a Shareholder of a Passive Foreign Investment Company (PFIC) or Qualified Electing Fund (QEF).
- Form 926, Return by a U.S. Transferor of Property to a Foreign Corporation.
- Form 8865, Return of U.S. Persons With Respect to Certain Foreign Partnerships.
- Form 5471, Information Return of U.S. Persons With Respect To Certain Foreign Corporations.
- Form 3520, Annual Return To Report Transactions With Foreign Trusts and Receipt of Certain Foreign Gifts.
- Form 3520-A, Annual Information Return of Foreign Trust With a U.S. Owner.
- Form 8891, U.S. Information Return for Beneficiaries of Certain Canadian Registered Retirement Plans.
- Form 8938, Statement of Foreign Financial Assets.

FORM 114 (FORMERLY TDF 90-22.1), FBAR — REPORT OF FOREIGN BANK AND FINANCIAL ACCOUNTS

If you are a U.S. person (including a corporation, partnership, exempt organization, trust or estate) and have a financial interest in

or signature authority over a foreign financial account, you may be subject to a reporting requirement on Form 114, Report of Foreign Bank and Financial Accounts ("FBAR").

The FBAR must be filed on an annual basis if you have a financial interest in or signature authority over one or more financial accounts in a foreign country with an aggregate value exceeding \$10,000 at any time during the year. The report is due on June 30 of the succeeding year. There are no extensions available for filing the form and it must be filed electronically. This is the requirement for submission of both new and amended filings for all years. CPAs can file FBAR forms on behalf of their clients as long as they have a document granting them that authority.

Financial accounts include bank, securities, derivatives, foreign mutual funds or other financial accounts (including any savings, demand, checking, deposit, annuity, or life insurance contract or other account maintained with a financial institution). The IRS continues to suspend the reporting of offshore commingled funds, such as hedge funds and private equity funds.

A financial interest in an account includes being the owner of record or having legal title, even if acting as an agent, nominee, or in some other capacity on behalf of a U.S. person. A financial interest also includes an account held by a corporation in which you own, directly or indirectly, more than 50% of the total voting power or value of shares; a partnership in which you own an interest of more than 50% in the capital or profits; or a trust as to which you or any other U.S. person has a present beneficial interest in more than 50% of the assets or receives more than 50% of the current income.

In the case of a non-willful failure to file the FBAR, the IRS may impose a maximum penalty of \$10,000 per account. The maximum penalty imposed where there is willfulness is the greater of \$100,000 or 50% of the highest balance in the account during the year. Criminal penalties could also be assessed for willful violations.

OFFSHORE VOLUNTARY DISCLOSURE PROGRAMS

Since 2009 the IRS has offered various programs designed for taxpayers to voluntarily disclose previously unreported foreign income or assets. Two of the programs which focus on disclosure of foreign assets are the Offshore Voluntary Disclosure Program ("OVDP") and the Streamlined Filing Compliance Procedure ("SFCP"). Both programs provide an opportunity for taxpayers to come forward and disclose unreported foreign income and file informational returns while paying a reduced penalty or no penalty at all. In the case of the OVDP, the individual may also avoid criminal prosecution. In 2014 the IRS announced important changes to both

programs. Specifically, the IRS imposed stricter requirements and potentially higher penalties for taxpayers participating in the OVDP, and expanded the original SFCP program to include taxpayers residing both in the U.S. and in other countries; in general it eased the requirements for participation in the latter program.

Note: *There is no set application deadline for these programs and the IRS can change the terms, increase penalties or decide to end them altogether at any time. Thus, taxpayers who can benefit from participating in these programs should act promptly.*

FORM 8621, RETURN BY A SHAREHOLDER OF A PASSIVE FOREIGN INVESTMENT COMPANY OR QUALIFIED ELECTING FUND

U.S. persons who invest in a foreign corporation which is a PFIC must pay tax on gains from the sale of the investment or on certain distributions from the PFIC ("triggering event"), unless a qualified electing fund ("QEF") election or mark-to-market ("MTM") election is made. If neither of these two elections is made, the PFIC rules require a ratable allocation of any gain over the years during which the shares were held and that gain is taxed at the highest rate on ordinary income in effect for each of the years involved, rather than the beneficial long-term capital gains rate in the year of disposition. An interest charge is also imposed on the tax, and begins running from the period to which such gain is allocated. In certain situations, this tax can exceed 100% of the gain.

Classification as a PFIC occurs when 75% or more of the corporation's income is passive or when more than 50% of the corporation's assets generate passive income. Passive income includes, but is not limited to, interest, dividends, and capital gains.

A U.S. shareholder who makes the QEF election on Form 8621 is required to annually include in income the pro rata share of the ordinary earnings and net capital gains of the corporation, whether or not distributed, but can avoid the onerous PFIC tax. Alternatively, a shareholder of a PFIC may make a mark-to-market election on Form 8621 for marketable PFIC stock. If the election is made, the shareholder includes in income each year an amount equal to the excess, if any, of the fair market value of the PFIC stock as of the close of the tax year over the shareholder's adjusted basis in the stock or deducts the excess of the PFIC stock's adjusted basis over its fair market value at the close of the tax year (the deduction is limited to prior cumulative income pickups). If the election is made, the PFIC rules above do not apply. Amounts included in income or deducted under the mark-to-market election, as well as gain or loss on the actual sale or other disposition of the PFIC stock, are treated as ordinary income or loss.

U.S. persons (i.e., individuals, corporations, partnerships, trusts, and estates) owning PFICs are required to file Form 8621 regardless of whether a triggering event has occurred or an election has been made. This applies to U.S. shareholders who own shares directly and indirectly who are at the lowest tier of a chain of companies. Ownership of PFIC stock through another U.S. person will also trigger reporting in certain instances. U.S. persons who are required to include an amount in income under the QEF or MTM regimes for PFIC stock held through another U.S. person are not required to file if another shareholder through which the U.S. person holds the PFIC stock timely files. The filing applies to domestic estates, non-grantor trusts and U.S. owners of domestic or foreign grantor trusts that own PFIC stock. U.S. persons who are beneficiaries of foreign estates and foreign nongrantor trusts that have made QEF or MTM elections are required to file, while those beneficiaries of domestic estates or trusts are only required to file if the estate or trust fails to file the form. U.S. beneficiaries are required to report in any case in which the beneficiary receives an excess distribution or recognizes gains treated as excess distributions. A limited filing exception applies for certain shareholders with respect to an interest owned in a PFIC for which the shareholder is subject to PFIC tax where no QEF or MTM election is in effect. The exception applies only if the shareholder is not subject to PFIC tax with respect to any excess distributions or gains treated as excess distributions and either the (A) the aggregate value of all PFIC stock owned by the shareholder at the end of the tax year of the shareholder does not exceed \$25,000 (\$50,000 for joint filers), or (B) the PFIC stock is owned by the shareholder through another PFIC, and the value of the shareholder's proportionate share of the upper-tier PFIC interest in the lower-tier PFIC does not exceed \$5,000.

FORM 926, RETURN BY A U.S. TRANSFEROR OF PROPERTY TO A FOREIGN CORPORATION

Form 926 is used to report certain transfers of tangible or intangible property to a foreign corporation. While there are certain exceptions to the filing, generally the following special rules apply to reportable transfers:

- If the transferor is a partnership, the U.S. partners of the partnership, not the partnership itself, are required to report the transfer on Form 926 based on the partner's proportionate share of the transferred property.
- If the transfer includes cash, the transfer is reportable on Form 926 if immediately after the transfer the person holds, directly or indirectly, at least 10% of the total voting power or the total value of the foreign corporation, or the amount of cash transferred by the person to the foreign corporation during the 12-month period ending on the date of the transfer exceeds \$100,000.

The penalty for failure to comply with the reporting requirements is equal to 10% of the fair market value of the property at the time of the transfer, limited to \$100,000 unless the failure to comply was due to intentional disregard.

FORM 8865, RETURN OF U.S. PERSONS WITH RESPECT TO CERTAIN FOREIGN PARTNERSHIPS

Form 8865 is required to report information with respect to controlled foreign partnerships, transfers to foreign partnerships, or acquisitions, dispositions, and changes in foreign partnership ownership. A separate Form 8865, along with the applicable schedules, is required for each foreign partnership.

There are four categories which define who is required to file the form and how much information must be provided. The categories are:

- **Category 1:** A U.S. person who owned more than a 50% interest in a foreign partnership at any time during the partnership's tax year.
- **Category 2:** A U.S. person who at any time during the tax year of the foreign partnership owned a 10% or greater interest in the partnership while the partnership was controlled by U.S. persons each owing at least 10% interests. However, if there was a Category 1 filer at any time during that tax year, no person will be considered a Category 2 filer.
- **Category 3:** A U.S. person, including a related person, who contributed property during that person's tax year to a foreign partnership in exchange for an interest in the partnership, if that person either owned directly or indirectly at least a 10% interest in the foreign partnership immediately after the contribution, or the value of the property contributed by such person or related person exceeds \$100,000. If a domestic partnership contributes property to a foreign partnership, the partners are considered to have transferred a proportionate share of the contributed property to the foreign partnership. However, if the domestic partnership files Form 8865 and properly reports all the required information with respect to the contribution, its partners will generally not be required to report the transfer.
- **Category 4:** A U.S. person who had acquired or disposed of or had a change in proportional interest may be required to report under this category if certain requirements are met.

A penalty of \$10,000 can be assessed for failure to furnish the required information within the time prescribed. This penalty is applied for each tax year of each foreign partnership. Furthermore, once the IRS has sent out a notification of the failure to report the

information, an additional \$10,000 penalty can be assessed for each 30-day period that the failure continues, up to a maximum of \$50,000 for each failure.

FORM 5471, INFORMATION RETURN OF U.S. PERSONS WITH RESPECT TO CERTAIN FOREIGN CORPORATIONS

Form 5471 is used to satisfy the reporting requirement for U.S. persons who are officers, directors, or shareholders in certain foreign corporations. You will be required to file this form if you meet one of the following tests (Category 1 has been repealed):

- **Category 2:** You are a U.S. person who is an officer or director of a foreign corporation in which a U.S. person has acquired stock that makes him or her a 10% owner with respect to the foreign corporation, or acquired an additional 10% or more of the outstanding stock of the foreign corporation.
- **Category 3:** You are a U.S. person who acquires stock in a foreign corporation which, when added to any stock owned on the date of acquisition or without regard to stock already owned, meets the 10% stock ownership requirement with respect to the foreign corporation, or
 1. You are a person who becomes a U.S. person while meeting the 10% stock ownership requirement with respect to the foreign corporation.
 2. You are a U.S. person who disposes of sufficient stock in the foreign corporation to reduce your interest to less than the 10% stock ownership requirement.
- **Category 4:** You are a U.S. shareholder who owns more than 50% of the total combined voting power of all classes of stock entitled to vote or more than 50% of the total value of the stock in a foreign corporation for an uninterrupted period of 30 days or more during any tax year of the foreign corporation.
- **Category 5:** You are a U.S. shareholder who owns stock in a controlled foreign corporation ("CFC") for an uninterrupted period of 30 days or more and who owns the stock on the last day of that year. A CFC is defined as a foreign corporation that has U.S. shareholders (counting only those with at least a 10% interest) that own on any day of the tax year of the foreign corporation more than 50% of the total combined voting power of all classes of its voting stock, or the total value of the stock of the corporation.

Note: Certain constructive ownership rules apply in determining stock ownership for these purposes.

The same penalties that apply for failure to file Form 8865 also apply to Form 5471 (see the discussion in the previous section). The information required to properly complete the Form 5471 can be extensive and difficult to obtain.

One of the issues faced by U.S. multinationals is that profits earned by foreign subsidiaries can often be subjected to U.S. federal income tax, even if the cash that represents those earnings is not repatriated. This is the result of the wide variety of anti-deferral rules introduced by Congress over the years. Most notably, Subpart F was designed to currently tax the types of income that could be easily moved into low tax jurisdictions, such as dividends, interest, rents and royalties. The anti-deferral rules aim to subject such income to federal tax in the year in which the subsidiary earns it. The CFC look-through rule provides that certain dividends, interest, rents and royalties paid between related parties are excluded from the calculation of Subpart F. Accordingly the look-through rule operates to reduce the global effective tax rate for many multinational companies.

Observation: *As a result of the recently enacted TIPA, the look-through rule for related CFCs has been extended through December 31, 2014.*

FORM 3520, ANNUAL RETURN TO REPORT TRANSACTIONS WITH FOREIGN TRUSTS AND RECEIPT OF CERTAIN FOREIGN GIFTS AND FORM 3520-A, ANNUAL INFORMATION RETURN OF FOREIGN TRUST WITH A U.S. OWNER

U.S. persons who either create a foreign trust, receive distributions from a foreign trust, or receive gifts or bequests from foreign persons are required to file Form 3520.

A foreign trust is defined as a trust in which either a court outside of the U.S. is able to exercise primary supervision over the administration of the trust or one or more non-U.S. persons have the authority to control all substantial decisions of the trust.

The information return must be filed in connection with the formation of a foreign trust, the transfer of cash or other assets by the settlor or grantor to a foreign trust, and the receipt of any distributions by a U.S. beneficiary from a foreign trust. Any uncompensated use of foreign trust property (e.g., real estate or personal property) by a U.S. grantor, U.S. beneficiary, or any related person is treated as a distribution to the grantor or beneficiary equal to the fair market value of the use of the property and must be reported. The use or loan of trust property will not be considered a distribution to the extent the loan is repaid with a market rate interest or the user makes a payment equal to the fair market value of such use within a reasonable time frame.

Gifts or bequests that you receive in the form of money or property from a foreigner (including a foreign estate) that is valued in the aggregate at more than \$100,000 annually is required to be reported. You must also disclose any gifts in 2014 in excess of \$15,358 (\$15,601 for 2015) from a foreign corporation or foreign partnership that you treat as a gift.

Form 3520 must be filed by the due date of your individual income tax return, including extensions. The failure to do so may subject you to a penalty of 35% of the gross value of any property transferred to the trust, 35% of the gross value of the distributions received from the trust, or 5% of the amount of certain foreign gifts for each month for which the gift goes unreported (not to exceed 25% of the gift).

In addition to the filing requirements of Form 3520, there is also a requirement to file Form 3520-A, Annual Information Return of Foreign Trust With a U.S. Owner, which is an annual information return of a foreign trust with at least one U.S. owner and which is considered a grantor trust. If you are a U.S. person who directly or indirectly transfers property to a foreign trust, the trust is presumed to have a U.S. beneficiary and is considered a grantor trust unless you can demonstrate that under the terms of the agreement, no income or corpus of the trust can be paid or accumulated for the benefit of a U.S. person. As the U.S. owner, you are responsible for ensuring that the foreign trust annually furnishes certain information to the IRS and the other owners and beneficiaries of the trust.

Form 3520-A must be filed by March 15 after the foreign trust's tax year, in the case of a calendar-year trust. A six-month extension can be requested on IRS Form 7004.

FORM 8891, U.S. INFORMATION RETURN FOR BENEFICIARIES OF CERTAIN CANADIAN REGISTERED RETIREMENT PLANS

For years prior to 2014, U.S. citizens or resident beneficiaries of certain Canadian retirement plans (e.g., RRSPs and RRIFs) were subject to U.S. income taxation on income accrued in the plan annually even though the income was not currently distributed to the beneficiary. Canada does not tax the accrued income, like the United States does, until distributions are made out of the plan. To deal with this potential mismatch and avoid double taxation, the United States-Canada income tax treaty provides relief. Prior to October 2014, an election had to be made annually on Form 8891 to defer taxation.

In October 2014, the IRS made it easier for taxpayers who hold interests in certain Canadian retirement plans to get favorable U.S. tax treatment and took additional steps to simplify procedures for U.S. taxpayers with these plans.

Eligible U.S. citizens and residents with interests in these retirement plans will now be treated as automatically making a retroactive election, under the provision of the United States-Canada income tax treaty, to defer U.S. income tax on income accruing in their Canadian retirement plans until a distribution is made. The annual filing of the Form 8891 is eliminated.

U.S. citizens and resident aliens qualify for this special treatment as long as they filed and continue to file U.S. returns for any year they held an interest in an RRSP or RRIF and include any distributions as income on their U.S. returns.

Taxpayers who have previously reported on their U.S. federal income tax returns undistributed accrued income in a Canadian retirement plan during a tax year are not eligible individuals under the 2014 procedure and will remain currently taxable on the undistributed income. These taxpayers, if they now want to make an election with respect to a Canadian retirement plan, must seek the consent of the IRS.

FORM 8938, STATEMENT OF FOREIGN FINANCIAL ASSETS

U.S. citizens or resident aliens filing joint returns who hold, at the end of the year, an aggregate of more than \$100,000 (or \$50,000 for single taxpayers) in certain foreign assets (e.g., a foreign financial account, an interest in a foreign entity, or any financial instrument or contract held for investment that is held and issued by a foreigner) will be required to report information about those assets on Form 8938, Statement of Foreign Financial Assets. Those taxpayers filing jointly who hold \$150,000 (or \$75,000 for singles) in foreign assets at any time during the year also have a filing obligation regardless of whether the end of year threshold is met. This requirement is in addition to the FBAR reporting. Form 8938 is part of the annual income tax return, whereas the FBAR is filed separately.

Other thresholds apply to individuals residing outside of the U.S. Also, individuals not required to file a U.S. income tax return for the tax year are not required to file Form 8938 even if the aggregate value of the specified foreign financial assets is more than the appropriate reporting threshold and there is a reporting exception for foreign financial assets reported on certain information returns.

Noncompliance with these rules for any tax year will result in a minimum failure to file penalty of \$10,000 and continuing failure to file penalties up to a maximum of \$50,000. In addition, a 40% understatement penalty for underpayment of tax as a result of a transaction involving an undisclosed specified foreign financial asset can be assessed, and criminal penalties may also apply.

For tax returns filed after March 18, 2010, the statute of limitations for assessing tax with regard to cross-border transactions or for certain foreign assets will be extended for 3 years from the date certain informational reporting is submitted related to the transaction or the asset if the failure to report was due to reasonable cause and not willful omission. If an omission is in excess of \$5,000 related to a foreign financial asset, the statute of limitations will be extended from 3 years to 6 years and would not begin to run until the taxpayer files the return disclosing the reportable foreign asset.

Observation: *The definition of a reportable foreign asset is much broader than under the FBAR rules and includes interests in offshore hedge funds, private equity funds, and real estate holding companies.*

FOREIGN ACCOUNT TAX COMPLIANCE ACT — FATCA

Under the FATCA regime, beginning July 1, 2014, foreign financial institutions are required to report directly to the IRS certain information about financial accounts held by U.S. taxpayers, or by foreign entities in which U.S. taxpayers hold a substantial ownership interest. To properly comply, a foreign financial institution will have to have entered into a special agreement with the IRS by June 30, 2014. A participating institution will be required to implement certain account opening procedures, identify U.S. accounts opened on or after the effective date of the agreement, and have certain procedures for pre-existing private banking accounts. The U.S. account holder will need to provide the institution Form W-9 to identify the status as a U.S. account holder and the institution will report the information to the IRS. Those institutions that do not participate and account owners unwilling to provide information will be subject to a 30% withholding tax on certain U.S. source payments including interest, dividends and proceeds from the sale of securities.

state tax issues

New York, New Jersey, Connecticut, Pennsylvania, and California tax most of the income subject to federal income tax, but all five states either limit or exclude the itemized deductions you claimed on your federal return.

INTRODUCTION

You do not get a complete picture of your personal tax situation until you consider the impact of income taxes in the state or states where you work or live, or from which you derive certain types of income. Each state has specific tax laws so the impact can be very different depending on the state jurisdictions in which you are subject to tax. This chapter is devoted to providing a summary of the state income taxes that may impact you if you work or live in the states of New York, New Jersey, Connecticut, Pennsylvania and California.

But before we discuss the factors that distinguish these states from each other, we should point out the rules relating to income exclusions, which are quite similar:

INCOME EXCLUSIONS

New York, New Jersey, Connecticut, Pennsylvania and California do not tax the following items of income:

- Interest on obligations of:
 1. The United States and its possessions, such as Puerto Rico (e.g., U.S. Treasury bills and bonds),
 2. Governmental agencies and municipalities within your state of residence, and
 3. Port Authority of New York and New Jersey for residents of New York and New Jersey, including such interest earned through bond funds.

Caution: *New York, New Jersey, Connecticut, Pennsylvania and California tax the interest income from municipal bonds issued by any other state. A mutual fund needs to have at least 50% of its assets invested in tax-exempt U.S. obligations and/or in California or its municipal obligations in order for any “exempt-interest dividends” to be exempt from California tax. The amount of income that can be excluded from California is based on the percentage of assets so invested.*

A mutual fund needs to have at least 80% of its assets in tax-exempt U.S. obligations and/or in New Jersey or its municipal obligations in order for “exempt-interest dividends” to be exempt from New Jersey tax. The amount of income that can be excluded from New Jersey is based upon the percentage of assets so invested. However, distributions from mutual funds attributable to interest from federal obligations are exempt from New Jersey tax irrespective of whether the 80% test is met.

- State and local income tax refunds (since they do not allow a deduction for payments of state and local income taxes).

chart

2014-2015 MAXIMUM NEW YORK TAX RATES

14

State or City	Maximum Tax Rates
New York State	8.82%
New York City	3.876%

For 2012-2017, the maximum NYS tax rate is applicable for married filing joint taxpayers with income over \$2 million. For income under \$2 million, the top rate is 6.85%.

- Social Security benefits.
- Certain pension and retirement benefits, subject to various limitations, including the payor of the pension, the age of the recipient, and which state is being considered.

NEW YORK

TAX RATES

Chart 14 shows the maximum tax rates imposed by New York State and New York City. These rates apply to all types of income since New York does not have lower tax rates for net long-term capital gains or qualifying dividend income.

DEDUCTION ADJUSTMENTS

Your allowable federal itemized deductions are reduced if your New York adjusted gross income (“NYAGI”) exceeds \$200,000 (\$100,000 for single or married filing separately filers). The reduction starts at 25% and increases to 50% if your NYAGI exceeds \$525,000 and is below \$1 million. New York completely eliminates itemized deductions, except for 50% of charitable contributions, for taxpayers with more than \$1 million of NYAGI. This reduction is in addition to the disallowance of state and local income and sales taxes. For tax years beginning before 2016, the charitable contribution deduction for taxpayers with a NYAGI of more than \$10 million is reduced to 25% of the corresponding federal deduction. For tax years beginning in or after 2016, all taxpayers with more than \$1 million of NYAGI are subject to the 50% reduction of the federal charitable contribution deduction.

New York State allows a deduction of \$1,000 for each dependent. In addition, New York State allows a deduction for some qualified education expenses, subject to certain limitations.

BONUS DEPRECIATION

New York State does not conform to federal rules regarding bonus depreciation which allows you to deduct 50% of the cost of qualifying property placed in service.

The exception to this rule is that federal bonus depreciation is allowed in limited areas of Lower Manhattan — the “Liberty Zone,” south of Canal Street to the East River; and the “Resurgence Zone,” south of Houston Street and north of Canal Street.

To the extent you take advantage of bonus depreciation on your federal return, either directly or from a pass-through entity, you will need to recompute your New York depreciation without applying the bonus depreciation rules. New York State does conform to the federal rules regarding Internal Revenue Code (“IRC”) Section 179 depreciation expense, as discussed in the business owner issues and depreciation deductions chapter.

NEW YORK LONG-TERM CARE INSURANCE CREDIT

New York State allows a credit equal to 20% of the premiums paid during the tax year for the purchase or continuing coverage under a qualifying long-term care insurance policy.

FAMILY TAX RELIEF AND “CIRCUIT BREAKER” TAX CREDITS

For tax years 2014 through 2016, there is a new refundable credit of \$350 available for New York residents with NYAGI of at least \$40,000 but not more than \$300,000 who claimed one or more dependent children under the age of 17 on the last day of the tax year and had a tax liability that was equal to or greater than zero.

Qualifying New York City residents can claim a credit against property taxes paid when property tax exceeds a percentage, varying from 4 to 6%, of their income. Both homeowners and renters are eligible, and the amount of property tax deemed paid by renters is set at 15.75% of adjusted rent paid in the taxable year.

NEW TAX TREATMENT OF CERTAIN TRUSTS

Starting in 2014, the tax treatment of certain trusts has changed.

A trust that is established and funded by a New York resident but that has no New York trustees, New York assets, or New York-sourced income is a New York Resident Exempt Trust. Prior to 2014, these trusts were not subject to tax. Starting in 2014, New York beneficiaries of such trusts will be taxed on distributions of accumulated and untaxed trust income from prior years. Exceptions exist for income accumulated before January 1, 2014, before the beneficiary became a New York resident, before the beneficiary's 21st birthday, or when the trust was subject to New York income tax. Income from these trusts will be taxed at the rate in effect in the year that the income is paid out to the beneficiary. Distributions made before June 1, 2014 need not be included in NYAGI.

Additionally, an Incomplete Gift, Nongrantor Trust (“ING”) that is created by a New York resident after January 1, 2014 will be treated and taxed as a grantor trust for New York purposes, even though it is still a separate taxpayer for federal income tax purposes. ING's liquidated on or before June 1, 2014 are not subject to this rule. These changes apply at both the state and New York City levels.

NEW YORK CITY UBT

Self-employed persons working in New York City are subject to a 4% Unincorporated Business Tax (“UBT”) if their total unincorporated business gross income exceeds \$85,000 (after the maximum allowance for taxpayer's services of \$10,000 (limited to 20% of UBT income) and a \$5,000 exemption).

New York City residents can claim a credit against their NYC personal income tax for a portion of the UBT paid by them, including their share of the UBT tax paid by a partnership. The credit is 100% of the UBT paid if your taxable income is \$42,000 or less, gradually declining as your income reaches \$142,000, at which point the credit is limited to 23% of the UBT paid.

Beginning in 2009, single sales factor is being phased in over 10 years. For 2014, the allocation formula was 73% receipts, 13.5% payroll, 13.5% property. For 2015, the allocation is 80%, 10%, 10% and for 2016 it is 87%, 6.5%, 6.5%. (This apportionment weighting also applies to the General Corporation Tax.)

METROPOLITAN COMMUTER TRANSPORTATION MOBILITY TAX ("MCTMT")

Beginning in 2009, a tax was imposed on employers and self-employed individuals engaged in business within the five boroughs of New York City, and the counties of Nassau, Rockland, Orange, Putnam, Suffolk, Dutchess and Westchester. A graduated tax rate between 0.11% and 0.34% applies to employers based upon the amount of quarterly payroll. For quarters beginning on or after April 1, 2012, payroll must be greater than \$312,500 in a calendar quarter before the employer tax applies. The tax also applies to self-employed individuals, including partners in partnerships and members of limited liability companies that are treated as partnerships based on their net earnings from self-employment allocated to the MCTD. The tax does not apply if the allocated net earnings from self-employment is \$50,000 or less for the year.

Prior to 2015, the MCTMT required the filing of separate tax forms and estimated tax payments on specified dates that are not the same as for other taxes. Beginning in 2015, MCTMT due dates for self-employed individuals and partners are the same as personal income tax due dates. Self-employed individuals and partners who are residents or part-year residents of New York State must report MCTMT information on their personal income tax returns. Payments due on or after April 15, 2015 must be combined with personal income tax payments. Employment of a domestic household employee does not subject you to the MCTMT. In addition, these employees are not subject to the MCTMT on their earnings since they are not self-employed. A partnership that has received approval to file a group return on behalf of its nonresident partners must include the MCTMT on that return.

COLLEGE SAVINGS PROGRAM, CREDITS AND EXPENSES

New York State has a program that allows you to make contributions to Section 529 plans as discussed in detail in the chapter on education incentives. New York State allows a deduction up to \$5,000 (\$10,000 if married filing jointly) if paid to a New York Section 529 plan.

In addition, a credit or itemized deduction may be available if total qualified college tuition expenses for all eligible students are \$5,000 or more. The credit is 4% of qualified expenses, up to \$10,000 per eligible student. Accordingly, the credit is limited to \$400 for each eligible student. If qualified expenses are less than \$5,000, the credit is equal to the lesser of total qualified expenses or \$200. In lieu of claiming the credit, a New York college tuition itemized deduction can be claimed if you itemize deductions on your federal return.

NEW JERSEY

TAX RATES

The maximum tax rate imposed by New Jersey is 8.97%. This rate applies to all types of income since New Jersey does not have lower tax rates for net long-term capital gains or qualifying dividend income.

Note: For New Jersey, the marginal tax rate for single taxpayers with taxable income in excess of \$75,000 but less than \$500,000 is 6.37%. Married/civil union partner taxpayers filing jointly are subject to the 6.37% rate on income in excess of \$150,000 but less than \$500,000. Single and married/civil union partner taxpayers filing jointly with incomes over \$500,000 are subject to a top marginal rate of 8.97%.

DEDUCTION ADJUSTMENTS

Except as noted below, no deduction is allowed for itemized deductions since New Jersey is a "gross income" state. In addition to the income exclusions noted above, New Jersey allows the following deductions to reduce your taxable income:

- Personal exemptions of \$1,000 each for you, your spouse (or domestic partner). New Jersey allows a \$1,500 personal exemption for each dependent child or other dependent (who qualifies as your dependent for federal income tax purposes). Taxpayers 65 years of age or over at the close of the taxable year, blind, or disabled, and dependents attending colleges are allowed an additional \$1,000 exemption.
- Alimony, separate maintenance, or spousal support payments to the extent they are includible in the gross income of the recipient (regardless of where the recipient lives).
- Medical expenses in excess of 2% of New Jersey gross income.
- The 50% portion of business travel and entertainment expenses that is disallowed on your federal return for self-employed individuals, business owners, and partners in a partnership.
- Property taxes up to a maximum of \$10,000 paid on a personal residence.
- Tenants are allowed a property tax deduction based on 18% of the rent paid during the year.

If you are considered a self-employed individual for federal income tax purposes or you received wages from an S corporation in which you were a more than 2% shareholder, you may deduct the amount you paid during the year for health insurance for yourself, your

spouse/civil-union partner/domestic partner, and your dependents. The amount of the deduction may not exceed the amount of your earned income, as defined for federal income tax purposes, derived from the business under which the insurance plan was established. You may not deduct any amounts paid for health insurance coverage for any month during the year in which you were eligible to participate in any subsidized plan maintained by your (or your spouse's/civil-union partner's/domestic partner's) employer. Note that for federal tax purposes, you may be able to deduct amounts paid for health insurance for any child of yours who is under the age of 27 at the end of 2014. However, for New Jersey purposes, you may deduct such amounts only if the child was your dependent.

NEW JERSEY BUSINESS INCOME

New Jersey requires taxpayers to report gross income by category. Prior to 2012, a loss within one category of income could only be applied against other income within that same category. Thus, a net loss in one category of income could not be applied against income or gains in another (e.g., net profits from business). As outlined below, there have been significant changes to the New Jersey business tax regime for years after 2011.

In 2011, legislation established an alternative business calculation under the gross income tax as a mechanism that permits taxpayers who generate income from different types of business entities to offset gains from one type of business with losses from another, and permits taxpayers to carry forward business-related losses for a period of up to 20 taxable years.

The law specifically permits taxpayers to net gains and losses derived from one or more of the following business-related categories of gross income: net profits from business; net gains or net income from rents, royalties, patents, and copyrights; distributive share of partnership income; and net pro rata share of S corporation income. The new law specifies that a taxpayer who sustains a loss from a sole proprietorship may apply that loss against income derived from a partnership, subchapter S corporation, or rents and royalties, but is prohibited from applying losses from these categories to income that is not related to the taxpayer's conduct of the taxpayer's own business, including salaries and wages, the disposition of property, and interest and dividends.

The law provides that net losses from business-related categories of income may be carried forward and applied against income in future taxable years. The law limits the application of net losses which are carried forward to gains and losses from the same business-related categories of income from which the net loss is derived, and allows the losses to be carried forward for a period of up to 20 taxable years following the year the net loss occurs.

The law also phases in the tax savings equally over five years beginning with tax year 2012. Once fully implemented, the maximum savings will be equal to 50% of the savings that would accrue from unlimited netting between these income categories and the net loss carry forward.

In 2012, New Jersey repealed the "regular place of business" rule and the "throw-out" rule for corporations. With the repeal of the "regular place of business" rule, businesses in New Jersey are now able to apportion income outside of the state even if they do not maintain an office outside New Jersey. Repeal of the "throw-out" rule eliminates the requirement to throw sales out of the denominator of the gross receipts factor for sales to jurisdictions that do not impose certain business taxes.

Commencing in 2012, there is a three-year phase-out of the property and payroll factors for apportioning income to New Jersey. This law modifies the Corporation Business Tax formula used to determine the portion of the income of a corporation subject to tax by New Jersey from a three-factor formula to a single sales factor formula. This change only applies to apportionment of income for C corporations and S corporations and not entities taxed as partnerships or sole proprietorships.

For 2013, the apportionment formula was 90% receipts, 5% payroll, and 5% property. Beginning in 2014, the apportionment formula will be fully phased in using the receipts factor at 100%.

Note: *New Jersey withholding tax calculations for nonresident partners will continue to be based on the corporate apportionment formulas as modified by the laws above. This could result in a significant disparity between income subject to tax by New Jersey for nonresident partners and the amount of nonresident withholding tax on the same income.*

BONUS DEPRECIATION

New Jersey has not conformed to federal rules regarding bonus depreciation which allow you to deduct 50% of the cost of qualifying property placed in service for 2014. The federal rule on bonus depreciation has been extended through December 31, 2014. See the chapter on business owner issues and depreciation deductions.

IRC SECTION 179 EXPENSE

New Jersey permits a limited IRC Section 179 deduction of up to a maximum of \$25,000. If you have more than one business, farm or profession, you may not deduct more than a total of \$25,000 of IRC Section 179 costs for all activities. To the extent higher IRC Section 179 deductions were taken for federal purposes, you will also need to recompute your New Jersey deduction.

COLLEGE SAVINGS PROGRAM

New Jersey does not provide for a college savings credit or deduction.

NEW JERSEY HOMESTEAD BENEFIT AND SENIOR FREEZE (PROPERTY TAX REIMBURSEMENT) PROGRAMS

These programs provide property tax relief for amounts paid on a principal residence.

SENIOR FREEZE PROGRAM

The Senior Freeze Program provides for a reimbursement of the difference between the amount of property taxes paid for the base year and the amount for which you are applying for a reimbursement. Applicants must meet the following conditions to be eligible for a Senior Freeze property tax reimbursement:

- Have been age 65 or older OR receiving federal Social Security disability benefits;
- Have lived in New Jersey for at least 10 years as either a homeowner or a renter;
- Have owned and lived in your home for at least three years;
- Have paid the full amount of the property taxes due on the home for the base year and each succeeding year up to and including the year in which you are claiming the reimbursement; and
- Have met the income limits for the base year and for each succeeding year up to and including the year for which you are claiming the reimbursement. These limits apply regardless of marital/civil-union status. However, applicants who are married or in a civil-union must report combined income of both spouses/civil-union partners.

Note: Under the terms of the State Budget for FY 2015, only those applicants whose income for 2012 did not exceed \$82,880 and whose income for 2013 did not exceed \$70,000 (the original limit was \$84,289) will be eligible to receive reimbursements for 2013 provided they met all the other program requirements. Residents whose 2013 income was over \$70,000 but not over \$84,289 will not receive reimbursements for 2013, even if they met all the other program requirements. The Division of Taxation will send notices to these applicants advising them that they are not eligible to receive reimbursement payments for 2013. However, by having filed an application by the September 15, 2014 due date,

these residents established their eligibility for benefits in future years and ensure that they will be mailed an application for 2014.

The program is expected to continue in 2015 for property taxes paid in 2014.

Homestead benefit program

The requirements for the Homestead benefit are slightly different, have different filings deadlines and are not age-based. It is possible to be eligible for both the Homestead Benefit Program and the Senior Freeze (Property Tax Reimbursement) program, but the amount of benefits received cannot exceed the amount of property taxes paid on their principal residence.

CONNECTICUT

TAX RATES

The maximum tax rate imposed by Connecticut is 6.7%. This rate applies to all types of income since Connecticut does not have lower tax rates for net long-term capital gains or qualifying dividend income.

Note: The maximum tax rate for Connecticut is 6.7% for the following individuals:

- Filing status is Single or Married filing separately with Connecticut taxable income of more than \$250,000.
- Filing status is Head of Household with Connecticut taxable income of more than \$400,000.
- Filing status is Joint or Qualifying Widow(er) with Connecticut taxable income of more than \$500,000

If your taxable income is less than these amounts, the maximum tax rate is 6.5%.

RECAPTURE TAX AMOUNT FOR TAXPAYERS IN HIGHER INCOME BRACKETS

A taxpayer whose Connecticut AGI exceeds the income thresholds specified below, after computing his or her Connecticut income tax liability using the applicable tax rates, and after applying the 3% phase-out provision, is required to add the recapture amount of tax as indicated below. The result of the recapture tax is essentially that the entire AGI is taxed at the highest income tax rate, without the benefit of graduated rates.

tax tip

26

RESIDENCY CAUTION

Your principal residence is in Connecticut but you work in New York City and maintain an apartment there. During the year you were present in New York for more than 183 days. You are a statutory resident of both New York State and New York City for tax purposes. As a result, Connecticut, New York State, and New York City would tax all of your income. A partial credit is available to offset some of this additional tax.

You can eliminate this tax by being present in New York State for 183 days or less or by eliminating the New York City apartment. By statute, a partial day in New York is considered a full day spent in New York with minor exceptions. Also, a day working at your home in Connecticut will be considered by New York to be a day working in New York, while Connecticut will consider it a day working in Connecticut. Therefore, income allocated to these days will be taxed by both New York State and Connecticut with no offsetting credit. Be sure to maintain substantiation to support the days in and out of New York.

- **Filing status is "Single" or "Married filing separately:"** If Connecticut AGI is more than \$200,000, add \$75 for each \$5,000, or fraction of \$5,000, by which the taxpayer's Connecticut AGI exceeds \$200,000. The maximum recapture amount is \$2,250.
- **Filing Status is "Head of household:"** If Connecticut AGI is more than \$320,000, add \$120 for each \$8,000, or fraction of \$8,000, by which Connecticut AGI exceeds \$320,000. The maximum recapture amount is \$3,600.
- **Filing status is "Joint" or "Qualifying widow(er):"** If Connecticut AGI is more than \$400,000, add \$150 for each \$10,000, or fraction of \$10,000, by which the taxpayer's Connecticut AGI exceeds \$400,000. The maximum recapture amount is \$4,500.

DEDUCTION ADJUSTMENTS

No deductions are allowed for itemized deductions, as Connecticut is a "gross income" state, as modified by the income exclusions noted above.

Connecticut allows resident individual taxpayers' income tax credits for real estate and personal property taxes paid to Connecticut political subdivisions on their primary residences or privately owned or leased motor vehicles. The maximum credit amount cannot exceed your personal tax liability. These credits are phased out for higher income persons.

chart

2013-2014 MAXIMUM
PENNSYLVANIA TAX RATES

15

State or City	Maximum Tax Rates
Pennsylvania	3.07%
Philadelphia	3.928%

See chart 16 for Philadelphia rate of tax withheld on Form W-2.

BONUS DEPRECIATION

Connecticut had conformed to federal rules regarding bonus depreciation. The federal rule allowing a deduction of 50% of the cost of qualifying properly placed in service is in effect through December 31, 2014. Connecticut does not allow bonus depreciation for C corporations. See the chapter on business owner issues and depreciation deductions.

IRS SECTION 179 EXPENSE

Connecticut does conform to the federal rules regarding IRC Section 179 depreciation expense as discussed in the business owner's issues and depreciation deductions chapter.

chart

16

PHILADELPHIA RATE OF TAX WITHHELD ON FORM W-2 FOR WAGES

Period	Resident	Nonresident
Through June 30, 2013	3.928%	3.4985%
July 1, 2013 - June 30, 2014	3.924%	3.495%
July 1, 2014 and subsequent years	3.92%	3.4915%

COLLEGE SAVINGS PROGRAM

Connecticut taxpayers may deduct contributions to the Connecticut Higher Education Trust from federal AGI, up to \$5,000 for individual filers and \$10,000 for joint filers. Amounts in excess of the maximum allowable contributions may be carried forward for five years after the initial contribution was made.

The “CHET Baby Scholars” program provides up to \$250 toward a newborn’s future college costs. For children born or adopted on or after January 1, 2014, CHET Baby Scholars will deposit \$100 into a CHET account. A second deposit of \$150 will be made if family and friends add at least \$150 to the child’s enrolled CHET account within four years. The deadline to participate is 12 months after the child’s birth or adoption and there are no income limitations.

PENNSYLVANIA

TAX RATES

Pennsylvania imposes a flat tax on all income at a rate of 3.07% (see Chart 15). Pennsylvania has eight categories (buckets) of income, and income/loss from one bucket may not be used to offset income/loss from another. The single flat tax rate of 3.07% applies to all types of income since Pennsylvania does not have lower tax rates for net long-term capital gains or qualifying dividend income.

Income from a business is subject to allocation and apportionment to the extent the business is “doing business” both within and outside of Pennsylvania. The default method is specific allocation if the taxpayer has books and records to substantiate the

allocation. However, most taxpayers apportion their business income. The apportionment formula for Pennsylvania Personal Income Tax purposes is an equal-weighted three-factor method, and the sales factor utilizes a cost of performance method.

Note: *The three-factor apportionment method, based upon cost of performance, differs from the corporate tax apportionment method of a single sales factor based upon market sourcing.*

Philadelphia imposes a Wage Tax on compensation earned by residents of the City and on nonresidents who work within the City. The tax rate for compensation paid after July 1, 2014 is 3.92% for residents and 3.9415% for nonresidents. However, nonresidents may apportion their income based upon duty days spent working within the City of Philadelphia.

Philadelphia imposes an unearned income tax, known as the “School Income Tax,” upon all residents of the City. The tax rate is 3.924%, and typically matches the Wage Tax rate. Some examples of taxable unearned income are dividends, certain rents and royalties, S corporation distributable income, and short-term (held for six months or less) capital gains. Earned income that is otherwise subject to the Philadelphia Business Income and Receipt Tax (“BIRT”), the Net Profits Tax (“NPT”) or Wage Tax is not subject to the School Income Tax.

Philadelphia imposes a BIRT, (f/k/a the Business Privilege Tax (“BPT”)), upon all persons engaged in business within the City. “Persons” includes individuals, partnerships, associations and corporations. Rental activities are usually considered to be business activities. The BIRT is the sum of two taxes; one on income and one on gross receipts. The gross receipts tax rate is 0.1415%, and the income tax rate is 6.45% on net taxable income. For the 2014 tax year, the income tax apportionment methodology is property, payroll and double weighted sales divided by four. The sales factor

and taxable receipts for the gross receipts tax are determined on a cost of performance method. For the 2015 tax year, the income tax apportionment methodology will be a single sales factor.

Philadelphia imposes a NPT on the net profits from the operation of a trade, business, profession, enterprise or other activity conducted by individuals, LLCs, partnerships, associations or estates and trusts. The tax is imposed on the entire net profit of any self-employed person who is a resident of Philadelphia regardless of the location of the business. It is also imposed on businesses conducted in Philadelphia by nonresidents. Corporations are not subject to this tax. Also, the proportionate amount of partnership, LLC and other association income attributable to corporate partners or members is exempt from the NPT. For residents, the tax rate is 3.928% through June 30, 2013 and 3.924% through June 30, 2014 and for non-residents the rate is 3.4985% through June 30, 2013 and 3.495% through June 30, 2014.

DEDUCTION ADJUSTMENTS

No deductions are allowed for itemized deductions, as Pennsylvania is a gross income state, as modified by the income exclusions noted above.

BONUS DEPRECIATION

Pennsylvania required that taxpayers add back the federal bonus depreciation (which has been extended through December 31, 2014). The taxpayer may then subtract an amount equal to $\frac{3}{7}$ of the taxpayer's ordinary depreciation deduction under IRC Sec. 167. The deduction may be claimed in succeeding taxable years until the entire amount of the addback has been claimed. Any disallowed depreciation not claimed as a result of the subtraction may be claimed in the last year that the property is depreciated for federal tax purposes. Although Pennsylvania decouples from the federal bonus depreciation, any property eligible for 100% federal bonus depreciation will also receive 100% depreciation for Pennsylvania purposes as well because Pennsylvania considers year one to be the final year of depreciation and thus permits any remaining "bonus depreciation" to be deducted.

IRC SECTION 179

Pennsylvania permits a limited deduction of up to a maximum of \$25,000 using IRC section 179. If you have more than one business, farm or profession, you may not deduct more than a total of \$25,000 of IRC section 179 costs for all activities. To the extent higher Section 179 deductions were taken for federal purposes, you will need to recompute your Pennsylvania depreciation deductions.

COLLEGE SAVINGS PROGRAM

Pennsylvania allows a deduction of up to the maximum federal annual exclusion amount of \$14,000 (\$28,000 if married filing jointly) for 2014 and 2015 to any Pennsylvania or non-Pennsylvania 529 plan in computing Pennsylvania taxable income.

CALIFORNIA

TAX RATES

California's top marginal income tax rate is 12.3% for the 2014 tax year. This rate applies to all types of income since California does not have lower tax rates for net long-term capital gains or qualifying dividend income.

The following table shows the 2014 marginal tax rates in effect for married filing joint taxpayers:

Taxable Income:	
\$519,688 or less	9.3%
\$519,689 to \$623,624	10.3%
\$623,625 to \$1,039,374	11.3%
Over \$1,039,374	12.3%

There is an additional Mental Health Services Tax of 1% for taxable income in excess of \$1,000,000.

BONUS DEPRECIATION

California did not conform to the federal bonus depreciation provisions.

IRC SECTION 179 EXPENSE

California law only allows a maximum deduction of \$25,000. The California maximum expensing amount is reduced dollar-for-dollar by the amount of qualified expensing-eligible property placed in service during the year in excess of \$200,000. California's \$200,000 phaseout threshold is not adjusted for inflation.

ESTIMATED TAX PAYMENTS

Installments due shall be 30% of the required annual payment for the first required installment, 40% of the required annual payment for the second required installment, and 30% of the required

annual payment for the fourth required installment. No payment is required for the third installment.

You are to remit all payments electronically once you make an estimate or extension payment exceeding \$20,000 or you file an original return with a total liability over \$80,000 for any taxable year that begins on or after January 1, 2009. Once you meet the threshold, all subsequent payments regardless of amount, tax type, or taxable year must be remitted electronically. Individuals who do not pay electronically will be subject to a 1% noncompliance penalty.

There are limits on the use of the prior year's tax safe harbor. Individuals who are required to make estimated tax payments, and whose California AGI is more than \$150,000 (or \$75,000 for married filing separately), must figure estimated tax based on the lesser of 90% of their current year's tax or 110% of their prior year's tax including AMT. Taxpayers with current year California AGI equal or greater than \$1,000,000 (or \$500,000 for married filing separately), must figure estimated tax based on 90% of their tax for the current year.

SUSPENDED NET OPERATING LOSS CARRYOVERS

For taxable years beginning 2008 through 2011, California suspended the net operating loss deduction. However, taxpayers with MAGI of less than \$500,000 for 2008/2009 and \$300,000 for 2010/2011 were not affected by the net operating loss suspension rules.

Taxpayers may continue to compute and carry over net operating losses during the suspension period. The carryover period for suspended 2008-2011 losses is extended by one year for losses incurred in 2010; two years for losses incurred in 2009; three years for losses incurred in 2008; and four years for losses incurred in taxable years beginning before 2008.

California allows net operating losses incurred in taxable years beginning on or after January 1, 2013, to be carried back to each of the preceding two taxable years. A net operating loss cannot be carried back to any taxable year before January 1, 2011. For net operating losses attributable to 2013, the carryback amount to any taxable year cannot exceed 50% of the net operating loss. For 2014 net operating losses, the carryback cannot exceed 75% of the net operating loss. Net operating losses attributable to taxable years beginning on or after January 1, 2015 can be carried back in full. A taxpayer may elect to relinquish the entire carryback period with respect to a net operating loss for any taxable year. If the taxpayer

elects to relinquish the carryback period, the net operating loss is carried forward only to the years eligible under the applicable carryover period.

OTHER CONSIDERATIONS

SAME-SEX MARRIED COUPLES AND REGISTERED DOMESTIC PARTNERS

The Supreme Court's decision striking down Section 3 of DOMA had a significant impact on same-sex married couples with regard to their federal and state income and estate taxes, health care benefits, social security and retirement benefits.

The U.S. Department of the Treasury and the IRS has ruled that same-sex couples, legally married in jurisdictions that recognize their marriages, will be treated as married for all federal law purposes. The ruling applies regardless of whether the couple lives in a jurisdiction that recognizes same-sex marriage or does not recognize same-sex marriage. This applies for federal income, gift, and estate tax purposes. This ruling does not apply to registered domestic partnerships, civil unions or similar formal relationships recognized under state law. Legally married same-sex couples generally must file their federal income tax return using either the married filing joint or married filing separate status.

Individuals who were in same-sex marriages may, but are not required to, file original or amended returns choosing to be treated as married for federal tax law purposes for the years still open under the statute of limitations, generally three years from the date the return was filed or two years from the date the tax was paid. As a result, refund claims can still be filed for the tax years, 2011, 2012 and 2013.

California, Connecticut, New Jersey, Pennsylvania and New York, as well as 32 other states plus the District of Columbia, all allow same-sex couples to marry and also recognize marriages of same-sex couples from other jurisdictions now living in their state. Connecticut treats "civil unions" and same-sex marriages the same as a marriage between opposite sex couples.

In New Jersey, a civil union couple may file a joint New Jersey tax return beginning with the 2007 tax year and generally civil unions entered into outside New Jersey will be recognized in New Jersey for state tax purposes. New Jersey civil union couples must take the affirmative step of getting married in order to get the federal tax benefits now available.

This is an evolving issue with numerous state cases pending. It is important to check the most recent state laws before filing as the state laws are shifting rapidly.

Please refer to the chapter on planning for same-sex couples for more information.

In addition, on January 16, 2015, the U.S. Supreme Court decided it will tackle the issue of whether same-sex couples have a constitutional right to marry or whether states are allowed to ban same-sex marriages.

BUILD AMERICA BONDS

Build America Bonds (tax credit type) provide the bondholder a non-refundable tax credit of 35% of the interest paid on the bond each year. If the bondholder lacks sufficient tax liability in any year to fully utilize that year's credit, the excess credit can be carried forward for use in future years.

NONRESIDENT TAXATION

Residents of New York, New Jersey, Connecticut, Pennsylvania or California working in other states as nonresidents are taxed by that other state. The income subject to tax is generally based on an allocation of salary and other earned income, using a formula comparing days worked within and outside the state. Also, the sale of real property located in a nonresident state by a nonresident is typically subject to tax by the nonresident state. This includes the gain on the sale of a cooperative apartment by a nonresident of New York State. However, you are allowed to reduce your resident state tax by a credit amount based on the tax paid to the nonresident state, subject to limitations.

Note: *New York State treats days worked at home for the convenience of the employee as days worked in New York. To qualify as a day worked outside New York, you must prove that there was a legitimate business reason that required you to be out of state, such as meeting with a client or customer. You should keep a diary or calendar of your activities and have documents proving your whereabouts (e.g., airplane tickets, credit card statements, bank statements and your passport).*

New York taxes certain income received by a nonresident related to a business, trade, profession or occupation previously carried on within New York, whether or not as an employee. This income includes, but is not limited to, income related to covenants not to compete and income related to termination agreements.

Note: *Pennsylvania has signed reciprocal agreements with Indiana, Maryland, New Jersey, Ohio, Virginia, and West Virginia under which one state will not tax employee compensation subject to employer withholding by the other states. These agreements apply to employee compensation only and not to income from sole proprietorships, partnerships and other entities.*

Note: *Other state tax credits are allowed California residents for net income taxes paid to another state (not including any tax comparable to California's alternative minimum tax) on income also subject to the California income tax. No credit is allowed if the other state allows California residents a credit for net income taxes paid to California. These reverse credit states include Arizona, Indiana, Oregon and Virginia.*

RESIDENCY CAUTION

Individuals who maintain a residence in one jurisdiction, such as New York City, but also have a residence in another jurisdiction must be very careful to avoid the strict rules that could make them a resident of both jurisdictions for tax purposes (see Tax Tip 26). Generally, if you maintain a permanent place of abode in New York, New Jersey, Connecticut or Pennsylvania and spend more than 183 days in that state, you will be taxed as a resident of that state even if your primary residence is in another state. California applies a similar test using nine months as the threshold, unless you can prove that the time spent in the state was due to a temporary or transitory purpose. In addition, the domicile test treats you as a resident of New York or New Jersey even if you only spend as little as 30 days in the state if you continue to be domiciled there. "Domicile" is generally defined as the place which is most central to your life and is determined using a facts and circumstances test.

STATE ESTATE OR INHERITANCE TAXES

New York, New Jersey, Connecticut and Pennsylvania impose an estate or inheritance tax on persons who are domiciled in the state or have property located in the state. California does not have an estate or inheritance tax. See the chapter on estate and gift tax planning for a further discussion.

Connecticut is the only state in the country that imposes a state gift tax.

26% Bracket	26%	35%	39%	39%	33%	35%	29%
Long-Term Capital Gains And Qualifying Dividends If In The AMT							
20% Bracket	20%	29%	33%	33%	27%	29%	23%

* If the maximum ordinary income tax rate for federal is 39.6%, 35%, or 33% and modified adjusted gross income (MAGI) exceeds \$250,000 for married filing joint, \$200,000 for single and \$125,000 for married filing separate taxpayers, you may be subject to an additional 3.8% Medicare Contribution Tax on net investment income. Similarly, if you meet these MAGI thresholds, long term capital gains may be taxed at 23.8%.

(a) For NYS, the maximum tax rate is applicable for taxable income over \$2,058,550. If taxable income is under \$2,058,550, the rate is 6.85%.

(b) The maximum California rate includes the 1% Mental Health Service Tax. The top rate for taxpayers with \$1 million or less of taxable income is 12.3%.

(c) For Connecticut taxpayers with taxable income below \$250,000, the maximum tax rate is 6.5%.

(d) The maximum tax rate for New Jersey applies to taxable income in excess of \$500,000. If your taxable income is less than \$500,000, your maximum tax rate is 6.37%.

(e) The Pennsylvania maximum rate does not include the City of Philadelphia tax on wages and self-employment income of 3.92% for Philadelphia residents and 3.4915% for non-residents.

Note: These effective tax rates do not include payroll and self-employment taxes or the 4% New York City Unincorporated Business Tax.

EisnerAmper Tax Advisory Services

EisnerAmper Tax Advisory Services is comprised of more than 330 tax professionals practicing across a myriad of tax and accounting disciplines. As one of the nation's largest tax practices EisnerAmper brings to its clients a breadth and depth of expertise ranging from international tax to high net worth individuals and closely held businesses, from privately held entities to public companies and from state and local taxation to tax provisions for large corporate clients.

EisnerAmper tax professionals combine far-sighted tax planning with close attention to detail. Our clients reap the benefit of large-firm competency without losing the personal attention and focus provided by our partner-led teams.

Our personal wealth advisory group focuses on concerns of high net worth individuals, family offices, closely held businesses, trusts and estates, private foundations, and not-for-profit organizations; and provides advice ranging from year-end tax planning strategies to retirement and estate and succession planning. Our corporate tax group is equally attentive to addressing the concerns of public and private companies, partnerships, and limited liability companies (LLCs) and their principals.

About EisnerAmper LLP

EisnerAmper LLP is a leading full-service advisory and accounting firm and among the largest in the United States. We provide audit, accounting, and tax services, as well as corporate finance, internal audit and risk management, litigation consulting, forensic accounting, and other professional advisory services to a broad range of clients across many industries. We work with high net worth individuals, closely held businesses, middle market and Fortune 500 companies. EisnerAmper provides services to more than 150 public companies and over 1,300 financial services entities. As companies grow, we assist them with a full complement of services to help them reach their goals every step of the way. With offices in New York, New Jersey, Pennsylvania, California, and the Cayman Islands, EisnerAmper serves clients worldwide.

EisnerAmper. Let's get down to business.™
