HOW TO LEVERAGE A MULTI-CAP VALUE STRATEGY IN A CORE/SATELLITE PORTFOLIO

The Select Value Fund can play a key role in a Core-Satellite structure.

Select Value Fund as a Core Holding

Studies show that value stocks have historically outperformed growth stocks over the long term, and the Select Value Fund has demonstrated that an active, multi-capitalization strategy can outperform a static asset allocation.

For these reasons we believe the Select Value Fund can serve a central role in a Core-Satellite portfolio, taking the position often allocated to passive, index-based mutual funds and ETFs. It offers diversified exposure along with the opportunity to pursue a measure of added value, or alpha.

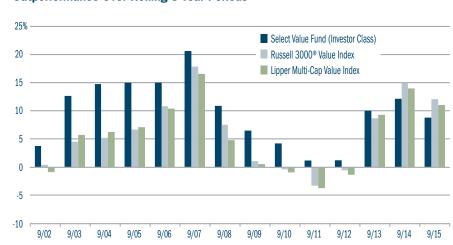

The Select Value Fund's broad, multi-cap approach can be easily complemented with more targeted satellite holdings designed to reflect an investor's distinct risk profile.

How Does It Work?

The Select Value Fund's rolling five-year returns, compared with those of its Lipper peer group and its benchmark, the Russell 3000® Value Index, are revealing. As of 9/30/2015, the Fund has outperformed both indices in all but two instances for each rolling five-year period since inception.

In a record that has persisted in a range of market environments, the Fund has consistently provided both upside participation and minimized downside risk.

Outperformance Over Rolling 5-Year Periods

In the prospectus dated 5/1/2015, the gross expense ratio for investor class shares of the Select Value Fund is 1.20%. Through 11/30/2001, the Advisor voluntarily waived a portion of the Fund's expenses. Without such waivers, total returns may have been lower.

Past performance does not guarantee future results. Performance represents past performance; current returns may be lower or higher. The investment return and principal value will fluctuate so that an investor's shares, when redeemed, may be worth more or less than the original cost. All returns reflect reinvested dividends and capital gains distributions, but do not reflect the deduction of taxes that an investor would pay on distributions or redemptions. Subject to certain exceptions, shares of a Fund redeemed or exchanged within 10 days of purchase are subject to a 2% redemption fee. Performance does not reflect this fee, which if deducted would reduce an individual's return. To obtain performance through the most recent month end, call 800-432-7856 or visit heartlandadvisors.com.

An investor should consider the Fund's investment objectives, risks, and charges and expenses carefully before investing or sending money. This and other important information can be found in the Fund's prospectus. To obtain a prospectus, please call 800-432-7856 or visit heartlandadvisors.com. Please read the prospectus carefully before investing.

In addition to stocks of large companies, the Select Value Fund invests in small– and mid-sized companies that are generally less liquid and more volatile than large companies. The Fund also invests in a smaller number of stocks (generally 40 to 60) than the average mutual fund. The performance of these holdings generally will increase the volatility of the Fund's returns. Value investments are subject to the risk that their intrinsic value may not be recognized by the broad market.

The asset allocations shown are hypothetical and represents those that may be commonly used.

Heartland Advisors considers large-cap companies to be larger than \$15 billion in market cap, mid-cap companies to be between \$2 billion and \$15 billion, small-cap companies to be between \$300 million and \$2 billion, and micro-cap companies to be less than \$300 million. The above breakdown does not include short-term investments.

Definitions:

Alpha is an annual measure of a portfolio's return in excess of the market return, both adjusted for risk. It is a measure of the manager's contribution to performance due to security selection. A positive annual Alpha indicates that the portfolio outperformed the market on a risk-adjusted basis, and a negative annual Alpha indicates the portfolio did worse than the market. Exchange Traded Fund (ETF) is a security that tracks an index, a commodity or a basket of assets like an index fund, but trades like a stock on an exchange ETFs experience price changes throughout the day as they are bought and sold. Lipper Mutual Fund Indices are created by equally weighting the 10 or 30 largest Nasdaq-listed funds in the corresponding Lipper investment objective grouping. The Lipper fund indices do not represent the Fund's benchmark. All indices are unmanaged. Russell 3000® Value Index measures the performance of those Russell 3000® Index companies with lower price-to-book ratios and lower forecasted growth characteristics. Russell Investment Group is the source and owner of the trademarks, service marks and copyrights related to the Russell Indexes. Russell® is a trademark of the Russell Investment Group. All indices are unmanaged. It is not possible to invest directly in an index.
